SECTION A

ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Areas planted and seventh production forecast for summer crops for the 2020 production season

According to the seventh production forecast for summer crops by the Crop Estimates Committee (CEC) for the 2020 production season, the expected South African maize crop was 15,537 million tons, which was 37,8% more than the 11,275 million tons of the 2019 season and 33,2% or 3,869 million tons more than the five-year average of 11,668 million tons up to 2019.

The estimated area that South African commercial producers planted to maize during the 2020 season was 2,611 million ha. This was 13,5% or 310 300 ha more than the 2,301 million ha planted in the previous season. Of this area, 1,220 million ha (46,7%) were in the Free State, 565 000 ha (21,6%) in the North West and 513 000 ha (19,6%) in Mpumalanga province.

The plantings of maize in the Free State increased by an estimated 18,4%, from 1,030 million ha in 2019 to 1,220 million ha in 2020 and in the North West, it increased by 16,5%, from 485 000 ha to 565 000 ha. Plantings in Mpumalanga increased by an estimated 6,2%, from 483 000 ha in 2019 to 513 000 ha in 2020.

The ratio of white to yellow maize plantings for 2020 is 62:38, as against 56:44 the previous season. The estimated white maize plantings were 1,616 million ha, which were 24,5% more than the previous season's 1,298 million ha, while the yellow maize plantings were estimated to be 994 500 ha—0,8% less than the 1,002 million ha for 2019.

Most of the country's maize crop was produced in the Free State (45,0%), Mpumalanga (20,5%) and the North West (18,5%) provinces.

The production forecast for white maize was 9,003 million tons, which was 62,4% or 3,458 million tons more than the 5,545 million tons of 2019 and 2,974 million tons more than the average of the five years up to 2019. The expected yield for white maize was 5,57 t/ha, as against 4,27 t/ha the previous season.

In the case of yellow maize, the production forecast was 6,534 million tons, which was 14,0% or 804 060 tons more than the 5,730 million tons of the previous season and 895 260 tons more than the five-year average up to 2019. The yield for yellow maize was expected to be 6,57 t/ha, as against 5,72 t/ha in 2019.

The expected sunflower seed crop was 785 910 tons, which was 15,9% more than the 678 000 tons of the previous season and 2,5% more than the average of 766 400 tons for the five years up to 2019. The area planted to sunflower seed was estimated at 500 300 ha, which was 2,9% less than the 515 350 ha planted in 2019. The expected yield was 1,57 t/ha, as against 1,32 t/ha the previous season.

The production forecast for soya beans was 1,261 million tons, which was 7,8% more than the 1,170 million tons of the previous season. The estimated area planted was 705 000 ha, which was 3,5% or 25 500 ha less than the 730 500 ha planted in 2019. The expected yield was 1,79 t/ha, as against 1,60 t/ha in 2019.

The expected groundnut crop was 50 920 tons, which was 162,5% or 31 520 tons more than the 19 400 tons of the 2019 season and 1 234 tons more than the five-year average of 49 686 tons per annum up to 2019. The area planted to groundnuts was an estimated 37 500 ha, which was 87,0% or 17 450 ha more than the 20 050 ha planted the previous season. The expected yield was 1,36 t/ha, as against 0,97 t/ha in 2019.

The production forecast for sorghum was 145 610 tons—14,7% more than the 127 000 tons of the previous season. The area planted to sorghum was estimated to be 42 500 ha, which was 15,8% or 8 000 ha less than the 50 500 ha planted in 2019. The expected yield was 3,43 t/ha, as against 2,51 t/ha the previous season.

The production of dry beans was expected to be 64 800 tons, which was 2,3% or 1 555 tons less than the 66 355 tons of the previous season and 2 185 tons more than the five-year average of 62 615 tons per annum up to 2019. The estimated area planted was 50 150 ha, which was 15,4% less than the 59 300 ha planted the previous season. The expected yield was 1,29 t/ha, as against 1,12 t/ha for 2019.

Area estimate and seventh production forecast of summer field crops: 2020 production season*

Crop	Area planted 2020	Seventh forecast 2020	Area planted 2019	Final crop 2019	Change – tons 2020 vs 2019
	ha	tons	ha	tons	%
White maize	1 616 300	9 002 910	1 298 400	5 545 000	+62,4
Yellow maize	994 500	6 534 060	1 002 100	5 730 000	+14,0
Total maize	2 610 800	15 536 970	2 300 500	11 275 000	+37,8
Sunflower seed	500 300	785 910	515 350	678 000	+15,9
Soya beans	705 000	1 261 250	730 500	1 170 345	+7,8
Groundnuts	37 500	50 920	20 050	19 400	+162,5
Sorghum	42 500	145 610	50 500	127 000	+14,7
Dry beans	50 150	64 800	59 300	66 355	-2,3

* Forecasts and estimates exclude the non-commercial sector.

Areas planted and first production forecast for winter crops for the 2020 production season

According to the first production forecast for winter crops by the Crop Estimates Committee (CEC) for the 2020 production season, also released by the CEC on 27 August 2020, the expected wheat crop for 2020 was 1,962 million tons, which is 27,8% or 427 230 tons more than the 1,535 million tons of the previous season. The expected yield was 3,80 t/ha, compared to 2,84 t/ha the previous season. The area estimate for wheat was 515 800 ha, as against 540 000 ha for 2019—a decrease of 4,5%.

The main contributing provinces to the expected wheat crop were the Western Cape, with a production forecast of 978 000 tons (49,8%), followed by the Free State with 380 000 tons (19,4%) and the Northern Cape with 277 500 tons (14,1%). The expected yield for the Western Cape was 3,00 t/ha, which is 50,0% higher than the 2,00 t/ha of the previous season. A yield of 3,80 t/ha was expected for the Free State, which is 49,2% higher than the 2,55 t/ha for 2019. The expected yield for the Northern Cape was 7,50 t/ha, compared to 7,00 t/ha the previous season—an increase of 7,1%.

The production forecast for malting barley was 505 215 tons, which is 46,4% or 160 215 tons higher than the 345 000 tons of the previous season. The area planted was estimated at 141 690 ha and the expected yield was 3,57 t/ha.

The expected canola crop was 122 820 tons, while the area estimate was 74 120 ha, with an expected yield of 1,66t/ha.

The expected oats (cereals) crop was 45 500 tons, while the area estimate was 27 000 ha, with an expected yield of 1,69 t/ha.

Area estimate and first production forecast of winter cereals crops: 2020 production season*

Crop	Area planted 2020	First forecast 2020	Area planted 2019	Final crop 2019	Change – tons 2020 vs 2019
	ha	tons	ha	tons	%
Wheat	515 800	1 962 230	540 000	1 535 000	+27,8
Malting barley	141 690	505 215	131 960	345 000	+46,4
Canola	74 120	122 820	74 000	95 000	+29,3
Oats	27 000	45 500	21 000	16 500	+175 8

2. ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	July '18 to June '19	July '19 to June '20	% change
Total gross farming income (R million)	279 478	307 851	+10,2
Expenditure on intermediate goods and services (R million)	154 948	164 481	+6,2
Total farming cost (R million)	194 551	198 802	+2,2
Net farming income (R million)	90 746	115 673	+27,5
Domestic terms of trade (2010 = 1)	1,04	1,03	-1,0

Gross income from major products at current prices

Field crops (R million)	July '18 to June '19	July '19 to June '20	% change
Maize	27 228	31 735	+16,6
Wheat	7 063	6 193	-12,3
Sugar cane	8 564	10 230	+19,4
Sunflower seed	3 436	4 889	+42,3
Tobacco	540	265	-50,8
All field crops	58 979	65 817	+11,6
Horticulture (R million)			
Vegetables (including potatoes)	24 603	26 647	+8,3
Deciduous and other fruit	19 194	30 054	+56,6
Citrus fruit	20 663	23 724	+14,8
Viticulture	6 205	6 473	+4,3
Subtropical fruit	4 956	4 704	-5,1
All horticultural products	84 917	100 562	+18,4
Animal products (R million)			
Poultry meat	46 264	48 790	+5,5
Cattle and calves slaughtered	34 609	35 738	+3,3
Milk	15 989	17 170	+7,4
Eggs	10 587	10 409	-1,7
Sheep slaughtered	6 290	7 195	+14,4
All animal products	135 582	141 472	+4,3

3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 1 July 2019 to 30 June 2020. Aggregates are compared with the period 1 July 2018 to 30 June 2019.

Gross farming income

Gross farming income refers to that part of agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross farming income from all agricultural products increased by 10,2% to R307 851 million for the year ended 30 June 2020, from R279 478 million in the previous period, largely due to the increase in gross income derived from all agricultural products.

The income from horticultural products increased by 18,4% due to the increase in income from deciduous and other fruit by 56,6%, citrus fruit by 14,8%, vegetables by 8,3% and viticulture by 4,3%.

The income from field crops increased by 11,6% due to the increase in income from groundnuts by 58,0%, soya beans (50,3%), sunflower seed (42,3%), grain sorghum (36,7%), sugar cane (19,4%), maize (16,6%) and dry beans slightly (0,3%).

The income from animal products increased by 4,3% as the result of the increase in income from sheep slaughtered by 14,4%, milk (7,4%), poultry meat (5,5%) and cattle and calves slaughtered (3,3%).

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased by 6,3% due to the increase in expenditure on seeds and plants and building and fencing material by 10,0% each, packing material (9,0%), farm feed (6,1%), farm services and animal health and crop protection (6,0%) respectively, maintenance and repairs of machinery and implements (5,0%), fuel (3,6%) and fertilisers (3,0%).

Farm feed had the largest share as an expenditure item, accounting for 28,5%, maintenance and repairs of machinery and implements (13,5%), farm services (12,2%), fuel (8,2%), seed and plants (7,2%), animal health and crop protection (6,2%), packing material (5,1%), fertilisers (4,5%) and building and fencing material (4,4%).

Prices received and paid by farmers

The weighted average price received by farmers for their agricultural products increased by 2,4% due to the increase in prices of field crops and horticultural products by 9,5% and 2,1%, respectively.

The weighted average price of field crops increased by 9,5% as the result of the increase in the prices of oilseeds by 13,2%, summer grains by 10,0%, hay by 8,8%, sugar cane by 8,6% and winter grains by 8,4%.

The weighted average price of horticultural products increased by 2,1% due to the increase in the prices of viticulture by 7,5%, fruit by 1,8% and vegetables slightly by 0,8%.

The weighted average price of animal products decreased slightly by 0,7% due to the decrease in prices of pastoral products and poultry meat by 15,8% and 1,7%, respectively.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements as well as intermediate goods and services increased by 2,8%, compared to 4,3% the previous period. The prices of animal health and crop protection, seed and feeds increased by 4,5% each, fencing material by 2,3%, building material by 2,1%, fertilisers by 1,9%, tractors by 1,7%, packing material by 1,6% and trucks by 1,2%.

The domestic terms of trade showed a decrease of 1,0% due to the increase in production costs by 2,8%, as opposed to the increase of 2,4% in prices earned by the farmers.

Farming income and cash flow

The increase of 10,2% in gross farming income and 6,2% in the expenditure of intermediate goods and services led to the increase in net farming income by 27,5%. Interest payments increased by 8,6% while labour costs and rent payment increased by 3,6% each.

The farmers' cash flow increased by 18,6% and is estimated at R109 224 million for the period ended June 2020, from R92 093 million the previous period.

Conclusion

The increase in gross farming income can be attributed to the increase of 3,8% in income derived from all agricultural products. The increase in income from horticultural and animal products was mainly driven by the increase in production volumes. On the other hand, the increase in income from field crops was largely influenced by the increased prices notwithstanding a drop in production levels.

4. INDICES OF PRODUCER PRICES OF AGRICULTURAL PRODUCTS

Product	Weight	April		May		June	
		2019	2020	2019	2020	2019	2020

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is in turn influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Cape Town Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2015 to 2019.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Ms Mahlatse Makaleng

Interesting fruit: Lemon

Common names: lemon

Scientific names: *Citrus x limon*

History: The origin of the lemon is unknown, though lemons are thought to have first grown in Assam (a region in northeast India), northern Burma or China. A genomic study of the lemon indicated it was a hybrid between bitter orange (sour orange) and citron. ... Spanish conquest throughout the New World helped spread lemon seeds.

The lemon was first recorded in literature in a 10th-century Arabic treatise on farming, and was used as an ornamental plant in early Islamic gardens. It was distributed widely throughout the Arab world and the Mediterranean region between 1000 and 1150.

Description: Lemon is rounded and slightly elongated, it belongs to the family of citrus fruit and therefore it shares many of the characteristics of other species of citruses, as for instance the thick skin. The pulp is pale yellow, juicy and with an acid flavour; and is divided in gores. The skin is yellow and especially bright when it is ripen.

The tree is small, about six meters high, perennial, with indented and pointed leaves. It does not demand soil quality, that is why it stands both sand and clay soils. It is very sensitive to chilling, frosts and high temperatures, more than the orange, mandarin or grapefruit trees. The flowers, big and purple, they are grouped in inflorescences.

Cultivation: While they grow best in warm, temperate and subtropical areas, you can grow them in cold inland areas if you plant them in a protected spot. In exceptionally cold areas, plant them in large pots that can be moved onto a patio or under the roof overhang during cold weather.

The Varieties

The Cape rough-skinned lemon does well in colder areas. However, be aware that the skin comes off like a naartjie, which means it is not easy to slice.

Smooth-skinned Eureka is the most popular variety. It does not handle frost well so it needs a protected spot against a north or west-facing wall. Moreover, when it is young, keep it covered with garden fleece on cold winter nights.

The Meyer variety is slightly sweeter and more compact making it ideal for pots. Large pots are essential so that they do not dry out too quickly. Raise them off the ground on bricks or stones to improve the drainage and airflow.

Health benefits:

1. It is a good source of vitamin C

Citrus fruits like lemons are high in vitamin C, a primary antioxidant that helps protect cells from damaging free radicals. You have probably heard that vitamin C may help prevent or limit the duration of the common cold.

2. It supports weight loss

Research has shown that polyphenol antioxidants found in lemons significantly reduces weight gain in mice that are overfed in order to induce obesity. In these mice studies, the antioxidant compounds also offset the negative effects on blood glucose levels and improved insulin resistance, the two main factors in the development of type 2 diabetes.

3. It helps prevent kidney stones

The citric acid in lemons may help prevent kidney stones. Citrate, a component of citric acid, paradoxically makes urine less acidic and may even break up small stones. Drinking lemon water not only gets you citrate, but also the water you need to help prevent or flush out stones.

4. It improves your skin quality

Vitamin C found in lemons may help reduce skin wrinkling, dry skin from aging, and damage from the sun. How water improves skin is controversial, but one thing is certain. If your skin loses moisture, it becomes dry and prone to wrinkles

Culinary Uses: Lemons are rarely eaten raw but are used to flavour many sweet and savoury dishes. They are used in sauces or as an accompaniment to fish and poultry. Sauces and foods containing lemon juice help in the digestion of fried foods. Lemons are also used in baked goods and desserts to provide a light, fresh flavour.
