ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Areas planted and ninth production forecast for summer crops for the 2022 production season

According to the final production estimate for summer crops by the Crop Estimates Committee (CEC) for the 2022 production season, the expected South African maize crop was 15,329 million tons, which was 6,0% less than the 16,315 million tons of the 2021 season and 6,1% or 885 100 tons more than the five-year average of 14,444 million tons up to 2021.

The estimated area that South African commercial producers planted to maize during the 2022 season was 2,623 million ha. This was 4,8% or 132 400 ha less than the 2,755 million ha planted in the previous season. Of this area, 1,224 million ha (46,7%) were in Free State, 544 000 ha (20,7%) in North West and 515 000 ha (19,6%) in Mpumalanga.

The plantings of maize in the Free State decreased by an estimated 7,8%, from 1,328 million ha in 2021 to 1,224 million ha in 2022 and in North West by 6,2%, from 580 000 ha to 544 000 ha. Plantings in Mpumalanga decreased by an estimated 1,9%, from 525 000 ha in 2021 to 515 000 ha in 2022.

The ratio of white to yellow maize plantings for 2022 is 60:40, as against 61:39 the previous season. The estimated white maize plantings were 1,575 million ha, which were 6,9% less than the previous season's 1,692 million ha, while the yellow maize plantings were estimated to be 1,048 million ha—1,5% less than the 1,064 million ha for 2021.

Most of the country's maize crop was produced in the Free State (41,4%), Mpumalanga (23,2%) and North West (17,0%).

The production forecast for white maize was 7,790 million tons, which was 9,4% or 810 250 tons less than the 8,600 million tons of 2021 and 39 950 tons less than the average of the five years up to 2021. The expected yield for white maize was 4,95 t/ha, as against 5,08 t/ha the previous season.

In the case of yellow maize, the production forecast was 7,539 million tons, which was 2,3% or 175 650 tons lower than the 7,715 million tons of the previous season and 925 050 tons more than the five-year average up to 2021. The yield for yellow maize was expected to be 7,19 t/ha, as against 7,25 t/ha in 2021.

The expected sunflower seed crop was 845 550 tons, which was 24,7% more than the 678 000 tons of the previous season and 8,9% more than the average of 776 100 tons for the five years up to 2021. The area planted to sunflower seed was estimated at 670 700 ha, which was 40,4% more than the 477 800 ha planted in 2021. The expected yield was 1,26 t/ha, as against 1,42 t/ha the previous season.

The production forecast for soya beans was 2,201 million tons, which was 16,0% more than the 1,897 million tons of the previous season. The estimated area planted was 925 300 ha, which was 11,9% or 98 200 ha more than the 827 100 ha planted in 2021. The expected yield was 2,38 t/ha, as against 2,29 t/ha in 2021.

The expected groundnut crop was 49 000 tons, which was 23,8% or 15 300 tons less than the 64 300 tons of the 2021 season and 7 566 tons less than the five-year average of 56 566 tons per annum up to 2021. The area planted to groundnuts was an estimated 43 400 ha, which was 12,6% or 4 850 ha more than the 38 550 ha planted the previous season. The expected yield was 1,13 t/ha, as against 1,67 t/ha in 2021.

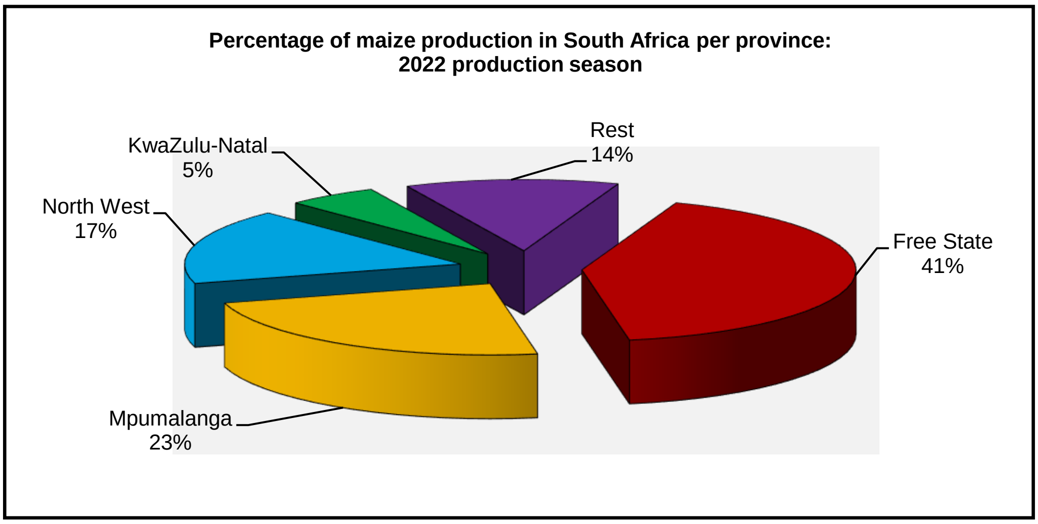
The production forecast for sorghum was 110 700 tons—48,5% less than the 215 000 tons of the previous season. The area planted to sorghum was estimated to be 37 200 ha, which was 24,4% or 12 000 ha less than the 49 200 ha planted in 2021. The expected yield was 2,98 t/ha, as against 4,37 t/ha the previous season.

The production of dry beans was expected to be 52 590 tons, which was 8,8% or 5 082 tons less than the 57 672 tons of the previous season and 12 752 tons less than the five-year average of 65 342 tons per annum up to 2021. The estimated area planted was 42 900 ha, which was 9,5% less than the 47 390 ha planted the previous season. The expected yield was 1,23 t/ha, as against 1,22 t/ha for 2021.

Area planted and ninth production forecast of summer field crops: 2022 production season*

Crop	Area planted 2022	Ninth forecast 2022	Area planted 2021	Final crop 2022	Change – tons 2022 vs 2021
	ha	Tons	ha	tons	%
White maize	1 575 000	7 789 750	1 691 900	8 600 000	-9,4
Yellow maize	1 048 000	7 539 350	1 063 500	7 715 000	-2,3
Total maize	2 623 000	15 329 100	2 755 400	16 315 000	-6,0
Sunflower seed	670 700	845 550	477 800	678 000	+24,7
Soya beans	925 300	2 201 000	827 100	1 897 000	+16,0
Groundnuts	43 400	49 000	38 550	64 300	-23,8
Sorghum	37 200	110 700	49 200	215 000	-48,5
Dry beans	42 900	52 590	47 390	57 672	-8,8

* Estimates exclude the non-commercial sector.



Intended plantings of summer grain crops for the 2023 production season

Figures on the intended plantings of summer crops for the 2023 production season were released by the Crop Estimates Committee (CEC) on 26 October 2022. Based on inputs received from a sample of producers, the area expected to be planted to maize on commercial farms was 2,591 million ha, of which 1,502 million ha (58%) were earmarked for white maize and 1,089 million ha (42%) for yellow maize. The commercial producers intended to decrease the area planted to white maize by 73 000 ha (4,6%) and increase yellow maize plantings by 41 000 ha (3,9%) from the previous season.

Producers indicated that less maize, especially white maize, will be planted for the 2023 season, mainly because of crop rotation practices.

In the case of sunflower seed, intended plantings were estimated at 580 500 ha, which is 13,4% or 90 200 ha less than the 670 700 ha planted the previous season.

The intended plantings of soya beans showed an increase of 16,2% from the area planted the previous season, from 925 300 ha to 1,076 million ha.

The intended plantings of groundnuts were 20,5% lower than the area planted the previous season, from 43 400 ha to 34 500 ha.

The plantings of sorghum were expected to decrease by 11,0%, from 37 200 ha to 33 100 ha.

The intended plantings of dry beans also showed a decrease of 13,3% from the area planted the previous season, from 42 900 ha to 37 200 ha.

Summary of intended plantings of summer grain crops: 2023 production season

Crop	Intended plantings 2023	Area planted 2022	Change 2023 vs 2022
	ha	ha	%
White maize	1 502 000	1 575 000	-4,6
Yellow maize	1 089 000	1 048 000	+3,9
Total maize	2 591 000	2 623 000	-1,2
Sunflower seed	580 500	670 700	-13,4
Soya beans	1 075 000	925 300	+16,2
Groundnuts	34 500	43 400	-20,5
Sorghum	33 100	37 200	-11,0
Dry beans	37 200	42 900	-13,3
Total	4 351 300	4 342 500	+0,2

Estimates are based on conditions by the middle of October 2022

Approximately 87% of the total area planted to summer grain crops in South Africa during the past three years was located in the Free State (47%), North West (21%) and Mpumalanga (19%).

Third production forecast for winter crops for the 2022 production season

According to the third production forecast for 2022 released by the CEC on 26 October 2022, the expected wheat crop was 2,210 million tons, which is 3,3% or 74 905 tons less than the crop of 2,285 million tons of the previous season. The expected yield was 3,90 t/ha, as against 4,36 t/ha the previous season.

The main wheat producing areas for 2022 are within Western Cape with 360 000 ha (63,5%), followed by the Free State with 96 000 ha (16,9%). The expected yield for Western Cape was 2,70 t/ha, as against 3,50 t/ha the previous season and 4,90 t/ha for the Free State, compared to 5,14 t/ha.

The production forecast for barley was 365 850 tons. The area planted was estimated at 101 000 ha, while the expected yield was 3,62 t/ha.

The expected canola crop was 198 230 tons, while the area estimate was 123 510 ha, with an expected yield of 1,60 t/ha. This is the largest canola crop produced in the history of South Africa.

The expected oats crop was 37 700 tons. The area planted estimated at 27 000 ha, while the expected yield was 1,40 t/ha.

The expected sweet lupines crop was 16 800 tons, while the area estimate was 21 000 ha. The expected yield was 0,80 t/ha.

Area and production estimates for winter cereals: 2022 vs the 2021 production season

Crop	Area planted 2022	Third forecast 2022	Area planted 2021	Final crop 2021	Change – tons 2022 vs 2021
	(A)	(B)	(C)	(D)	(B)÷(D)
	ha	tons	ha	tons	%
Wheat	566 800	2 210 095	523 500	2 285 000	-3,3
Barley	101 000	365 850	94 730	334 000	+9,5
Canola	123 510	198 230	100 000	198 100	+0,1
Oats	27 000	37 700	36 250	59 000	-36,1
Sweet lupines	21 000	16 800	22 000	28 600	-41,2

2. ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	Oct. ’20 to Sep. ’21	Oct. ’21 to Sep. ’22	% change
Total gross farming income (R million)	356 762	401 992	+12,7
Expenditure on intermediate goods and services (R million)	201 603	226 339	+12,3
Total farming cost (R million)	275 186	303 684	+10,4
Net farming income (R million)	88 679	103 291	+16,5
Domestic terms of trade (2015 = 1)	1,07	1,02	-4,6

Gross income from major products at current prices

Field crops (R million)	Oct. ’20 to Sep. ’21	Oct. ’21 to Sep.’22	% change
Maize	46 858	60 615	+29,4
Wheat	10 358	11 919	+15,1
Sugar cane	11 215	11 813	+5,3
Sunflower seed	5 793	8 623	+48,8
Cotton	366	312	-14,8
All field crops	99 916	123 151	+23,3
Horticulture (R million)			
Vegetables (including potatoes)	28 246	29 558	+4,6
Deciduous and other fruit	28 287	30 800	+8,9
Citrus fruit	25 935	27 102	+4,5
Viticulture	6 563	6 318	-3,7
Subtropical fruit	5 386	6 097	+13,2
All horticultural products	103 458	109 462	+5,8
Animal products (R million)			
Poultry meat	50 208	56 277	+12,1
Cattle and calves slaughtered	42 056	48 780	+16,0
Milk	20 620	21 071	+2,2
Eggs	10 530	12 123	+15,1
Sheep slaughtered	8 086	8 026	-0,7
All animal products	153 387	169 379	+10,4

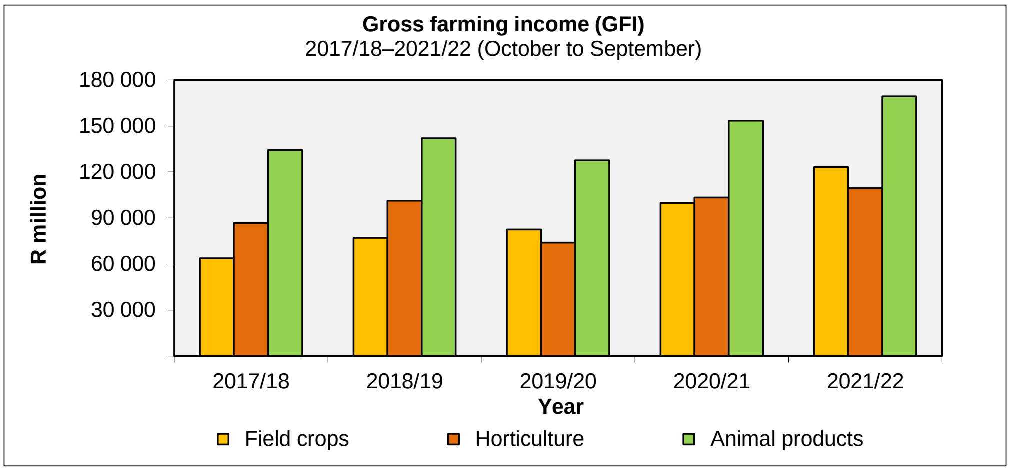
3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 1 October 2021 to 30 September 2022. Aggregates are compared with the period 1 October 2020 to 30 September 2021.

Gross farming income

Gross farming income refers to that part of agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross farming income that was obtained from all agricultural products increased by 12,7% to R401 992 million for the period ended September 2022, as compared to R356 762 million the previous period. This resulted from the increase in income from field crops by 23,3%, animal products by 10,4% and horticultural products by 5,8%.



The income earned from field crops increased by R23 234 million (23,3%) due to the increase in income from maize by R13 756 million (29,4%), soya beans by R5 281 million (38,5%), sunflower seed by R2 830 million (48,8%), wheat by R1 562 million (15,1%), sugar cane by R597,7 million (5,3%) and dry beans by R199 million (22,3%). The income from hay decreased by R1 052,2 million (19,5%), grain sorghum by R458,8 million (48,4%), groundnuts by R133,3 million (23,9%) and cotton by R54 million (14,8%).

The income from animal products increased to R169 379 million, which is R15 991 million (10,4%) higher than the R153 387 million that was made in the previous period. This was largely boosted by the increase in income derived from cattle and calves slaughtered by R6 724 million (16,0%), poultry meat by R6 069 million (12,1%), eggs by R1 593 million (15,1%), pigs slaughtered by R522 million (6,0%) and milk by R450,6 million (2,2%). The income from sheep slaughtered decreased slightly by R60,6 million (0,7%).

The income from horticultural products increased by 5,8% to R109 462 million, against R103 458 million in the previous period. This was mainly influenced by the increase in income from deciduous and other fruit by R2 513 million (8,9%), vegetables by R1 312 million (4,6%), citrus fruit by R1 166 million (4,5%) and subtropical fruit by R711,3 million (13,2%). The income from viticulture decreased by R245,1 million (3,7%).

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased by 12,3% and estimated at R226 339 million for the period ended September 2022. This was resulted from the significant increase in expenditure on fertilisers by 18,2%, farm feed (17,3%), fuel (10,3%), building and fencing material and seed and plants (10,0%) each, maintenance and repairs of machinery and implements (8,0%), animal health and crop protection (6,4%), farm services (6,0%) and packing material (4,1%).

The proportion of farm feeds to the total expenditure as an expenditure item was 37,2%, fertilisers (11,0%), farm services (10,1%), fuel (8,5%), maintenance and repairs of machinery and implements (6,8%), seed and plants (6,5%), building and fencing material and animal health and crop protection (4,0%) each and packing material (3,9%).

Prices received and paid by farmers

Prices received by farmers for their agricultural products increased on average by 7,6% for the period ended 30 September 2022, compared to an increase of 6,4% the previous year.

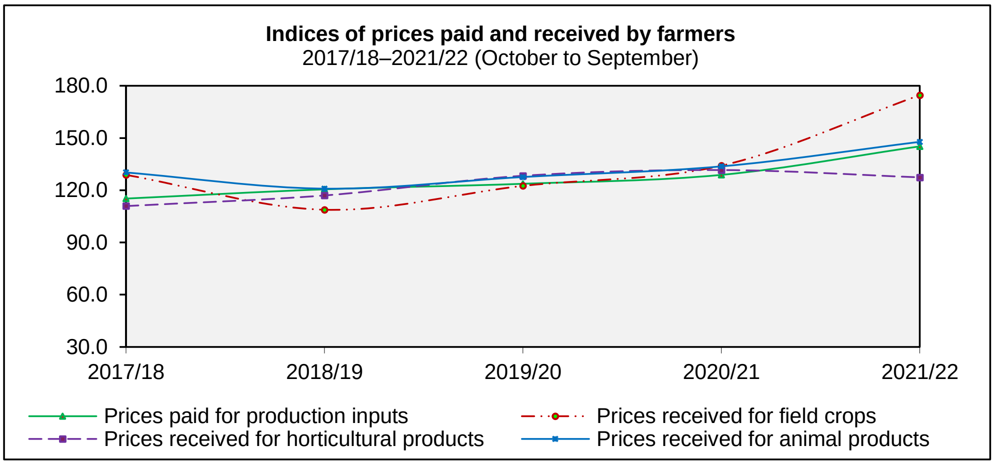
The weighted average price of field crops increased by 14,0% and was influenced by the increase in prices of summer grains by 29,4%, winter grains (25,0%), oilseeds (19,6%), dry beans (16,0%), hay (3,9%) and cotton (3,4%). The price of tobacco decreased by 6,9%.

The weighted average price of animal products increased by 10,5% due to the increase in prices of poultry meat by 11,8%, pastoral products and slaughtered stock by 10,8% each and dairy products by 5,8%.

The weighted average price of horticultural products decreased by 3,1% due to the decrease in the prices of fruit by 3,9%, vegetables by 2,6% and viticulture slightly by 0,8%.

The prices paid for farming requisites, including machinery and implements, intermediate goods and services and material for fixed improvements increased by 12,7%, compared to an increase of 4,1% in the previous period. This was driven by a noticeable increase in prices, especially of fertilisers by 44,8% and fuel (15,0%). The prices of building material increased by 10,8%, fencing material (8,0%), animal health and crop protection (6,6%), feed (5,6%), maintenance and repairs of machinery and implements (4,9%), packaging material (4,7%), tractors (4,4%) and trucks (4,2%).

The domestic terms of trade decreased by 4,6% owing to higher production costs, which increased by 12,7% more than the 7,6% increase in prices earned from the agricultural commodities.



Farming income and cash flow

The net farming income increased by 16,5%, subsequent to the increase of 12,3% in the expenditure on intermediate production inputs and 6,7% in factors of production, which impacted the gross farming income drastically. Interest payments increased by 8,0%, while labour costs and rent payment increased by 6,4% each.

The farmers' cash flow increased by 18,3% or R15 897 million and is estimated to be R102 661 million for the period ended September 2022, as opposed to R86 764 million the previous corresponding period.

Conclusion

The increase in gross farming income was driven by the increase in income from field crops by 23,3%, horticultural products by 10,4% and animal products by 5,8%. The increase in income from field crops and animal products was mainly the result of the increase in prices, while that from horticultural products was due to the increase in production levels.

4. INDICES OF PRODUCER PRICES OF AGRICULTURAL PRODUCTS

Product	Weight	July		August		September	
		2021	2022	2021	2022	2021	2022

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.
Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.
The graphs in this overview depict the trends for fruit and vegetables sold on the Kimberly Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received based on the average for the five-year period 2017 to 2021.
Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Interesting vegetable: Amadumbe

Common names: Mufhongwe, Madumbis, Taro or Dasheen

Scientific names: *Colocasia esculenta*

History: *Colocasia esculenta* originated in South East Asia and is now grown as a crop in many tropical and subtropical regions of the world.

Description: It is a robust herb with large heart-shaped "elephant ear" leaves and cylindrical rhizomes, or corms, that are harvested like potatoes. Amadumbe is a top-shaped tubular root or corm, also called a "mammy". It has a rough brown skin and weighs from 500 to 900 g, however, it can weigh up to 3,6 kg. The flesh is white or pink. Amadumbe tubers (corms) have a rich earthy flavour and a starchy flesh. It can be enjoyed on its own or added to a beef stew. The leaves and the stems are sometimes eaten similar to spinach and is a supplement to maize in Zulu cuisine.

Cultivation: It has been cultivated in South Africa for centuries. It was introduced by Portuguese traders before 1500. Amadumbe prefers semi-shade, but it can be grown in full sun if it is irrigated. It needs a warm climate and does not tolerate freezing temperatures. Amadumbe grows in slightly acidic, moist soil with lots of organic material or compost. It can be propagated from whole tubers or cuttings from tubers. It should be planted by hand with the cut side down and slightly slanted, about 15 cm deep. Amadumbe should be planted 60 cm apart with a 1 m space between the rows. The best planting time is December to April, or whenever the soil is moist. It should be fertilised with NPK (15:15:1). This indicates the ratio of nitrogen (N: 15 units) to phosphorus (P: 15 units) to potassium (K: one unit). Five to six Coke bottle caps filled with NPK can be sprinkled in a ring about 10 cm around the plant.

Health benefits: Amadumbe is high in carbohydrates (low GI) and has more protein and amino acids than any other root crop. It has 9% protein compared to potatoes (1,9%) and sweet potatoes (1,7%).
It is rich in fibre, magnesium, manganese, potassium, iron and vitamins A, B1, B2, E, B6 and C. It is cooked like potatoes or sweet potatoes and can be boiled, roasted, or grilled and served as mash, chips or in stews. Mashed amadumbe is used as a weaning diet.

Helps control blood sugar: Although taro root is a starchy vegetable, it contains two types of carbohydrates that are beneficial for blood sugar management: fibre and resistant starch. Fibre is a carbohydrate that humans cannot digest. Since it is not absorbed, it has no impact on blood sugar levels. It also helps slow down the digestion and absorption of other carbs, preventing large blood sugar spikes after meals. Taro also contains a special type of starch, known as resistant starch, that humans cannot digest and it consequently does not raise blood sugar levels. Roughly 12% of the starch in cooked taro root is resistant starch, making it one of the better sources of this nutrient. This combination of resistant starch and fibre makes taro root a good carb option—especially for people with diabetes.

It reduces risk of heart disease: Taro root is high in fibre and resistant starch, which help lower cholesterol and reduce one's risk of heart disease.

Amadumbe has anti-cancer properties: Taro root contains polyphenols and antioxidants that may combat cancer growth and protect one's body from oxidative stress.

It improves gut health: The fibre and resistant starch in taro root are fermented by gut bacteria to form short-chain fatty acids, which may protect against colon cancer and inflammatory bowel disease.

Weight loss aid: Due to its high fibre and resistant starch content, taro root may increase feelings of fullness, reduce overall calorie intake and increase fat burning, potentially leading to weight loss and reduced body fat.
