SECTION A

ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Areas planted and first production forecast for summer crops for the 2022 production season

According to the first production forecast for summer crops by the Crop Estimates Committee (CEC) for the 2022 production season, the expected South African maize crop was 14,528 million tons, which was 11,0% less than the 16,315 million tons of the 2021 season and 0,6% or 83 950 tons more than the five-year average of 14,444 million tons up to 2021.

The estimated area that South African commercial producers planted to maize during the 2022 season was 2,613 million ha. This was 5,1% or 141 900 ha less than the 2,755 million ha planted in the previous season. Of this area, 1,221 million ha (46,7%) were in the Free State, 540 000 ha (20,7%) in the North West and 515 000 ha (19,7%) in Mpumalanga.

The plantings of maize in the Free State decreased by an estimated 8,0%, from 1,328 million ha in 2021 to 1,221 million ha in 2022 and in the North West, it decreased by 6,9%, from 580 000 ha to 540 000 ha. Plantings in Mpumalanga decreased by an estimated 1,9%, from 525 000 ha in 2021 to 515 000 ha in 2022.

The ratio of white to yellow maize plantings for 2022 is 60:40, as against 61:39 the previous season. The estimated white maize plantings were 1,571 million ha, which were 7,1% less than the previous season's 1,692 million ha, while the yellow maize plantings were estimated to be 1,043 million ha—2,0% less than the 1,063 million ha for 2021.

Most of the country's maize crop was produced in the Free State (41,9%), Mpumalanga (23,0%) and the North West (16,5%).

The production forecast for white maize was 7,535 million tons, which was 12,4% or 1,065 million tons less than the 8,600 million tons of 2021 and 294 600 tons less than the average of the five years up to 2021. The expected yield for white maize was 4,80 t/ha, as against 5,08 t/ha the previous season.

In the case of yellow maize, the production forecast was 6,993 million tons, which was 9,4% or 722 150 tons less than the 7,715 million tons of the previous season and 378 550 tons more than the five-year average up to 2021. The yield for yellow maize was expected to be 6,71 t/ha, as against 7,25 t/ha in 2021.

The expected sunflower seed crop was 914 350 tons, which was 34,9% more than the 678 000 tons of the previous season and 17,8% more than the average of 776 100 tons for the five years up to 2021. The area planted to sunflower seed was estimated at 655 700 ha, which was 37,2% more than the 477 800 ha planted in 2021. The expected yield was 1,39 t/ha, as against 1,42 t/ha the previous season.

The production forecast for soya beans was 1,821 million tons, which was 4,0% less than the 1,897 million tons of the previous season. The estimated area planted was 915 300 ha, which was 10,7% or 88 200 ha more than the 827 100 ha planted in 2021. The expected yield was 1,99 t/ha, as against 2,29 t/ha in 2021.

The expected groundnut crop was 69 200 tons, which was 7,6% or 4 900 tons more than the 64 300 tons of the 2021 season and 12 634 tons more than the five-year average of 56 566 tons per annum up to 2021. The area planted to groundnuts was an estimated 44 900 ha, which was 16,5% or 6 350 ha more than the 38 550 ha planted the previous season. The expected yield was 1,54 t/ha, as against 1,67 t/ha in 2021.

The production forecast for sorghum was 146 590 tons—31,8% less than the 215 000 tons of the previous season. The area planted to sorghum was estimated to be 37 700 ha, which was 23,4% or 11 500 ha less than the 49 200 ha planted in 2021. The expected yield was 3,89 t/ha, as against 4,37 t/ha the previous season.

The production of dry beans was expected to be 59 690 tons, which was 3,5% or 2 018 tons more than the 57 672 tons of the previous season and 5 652 tons less than the five-year average of 65 342 tons per annum up to 2021. The estimated area planted was 42 900 ha, which was 9,5% less than the 47 390 ha planted the previous season. The expected yield was 1,39 t/ha, as against 1,22 t/ha for 2021.

Area estimate and first production forecast of summer field crops: 2022 production season*

Crop	Area planted 2022	First forecast 2022	Area planted 2021	Final crop 2021	Change – tons 2022 vs 2021
	ha	tons	ha	Tons	%
White maize	1 571 000	7 535 100	1 691 900	8 600 000	-12,4
Yellow maize	1 042 500	6 992 850	1 063 500	7 715 000	-9,4
Total maize	2 613 500	14 527 950	2 755 400	16 315 000	-11,0
Sunflower seed	655 700	914 350	477 800	678 000	+34,9
Soya beans	915 300	1 821 400	827 100	1 897 000	-4,0
Groundnuts	44 900	69 200	38 550	64 300	+7,6
Sorghum	37 700	146 590	49 200	215 000	-31,8
Dry beans	42 900	59 690	47 390	57 672	+3,5

* Forecasts and estimates exclude the non-commercial sector

Final production estimate for winter field crops for 2021

According to the final production estimate of winter crops, also released by the CEC on 28 February 2022, the expected wheat crop for 2021 was 2,257 million tons, which is 6,5% or 137 205 tons more than the 2,120 million tons of the previous season. The expected yield was 4,31 t/ha, compared to 4,16 t/ha the previous season. The area estimate for wheat was 523 500 ha, as against 509 800 ha for 2020—an increase of 2,7%. This is the largest wheat crop since the 2002 season.

The main contributing provinces to the expected wheat crop were the Western Cape, with a production forecast of 1,260 million tons (55,8%), followed by the Free State with 353 500 tons (15,7%) and the Northern Cape with 269 800 tons (12,0%). The expected yield for the Western Cape was 3,50 t/ha, which is 3,4% higher than the 3,38 t/ha of the previous season. A yield of 5,05 t/ha was expected for the Free State, which is 14,8% higher than the 4,40 t/ha for 2020. The expected yield for the Northern Cape was 7,60 t/ha, compared to 7,35 t/ha the previous season—an increase of 3,4%.

The production forecast for malting barley was 331 100 tons, which is 43,7% or 256 900 tons lower than the 588 000 tons of the previous season. The area planted was estimated at 94 730 ha and the expected yield was 3,50 t/ha.

The expected canola crop was 197 000 tons, while the area estimate was 100 000 ha, with an expected yield of 1,97 t/ha. This is the largest canola crop ever recorded for South Africa.

The expected oats (cereals) crop was 69 950 tons, while the area estimate was 36 250 ha, with an expected yield of 1,93 t/ha.

The production forecast for sweet lupines was 28 600 tons and the area planted was 22 000 ha. The expected yield was 1,30 t/ha.

Areas planted and final production estimate for winter cereals: 2021

Crop	Area planted	Final estimate	Area planted	Final crop	Change in production
	2021	2021	2020	2020	2021 vs 2020
	ha	tons	ha	Tons	%
Wheat	523 500	2 257 205	509 800	2 120 000	+6,5
Malting barley	94 730	331 100	141 690	588 000	-43,7
Canola	100 000	197 000	74 120	165 200	+19,2
Oats	36 250	69 950	26 200	57 000	+22,7
Sweet lupines	22 000	28 600	N/a	N/a	N/a

2 ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	Jan. to Dec. 2020	Jan. to Dec. 2021	% change
Total gross farming income (R million)	330 598	367 875	+11,3
Intermediate expenditure (R million)	190 690	204 154	+7,1
Total farming cost (R million)	232 052	245 481	+5,8
Net farming income (R million)	105 292	129 645	+23,1
Domestic terms of trade (2015 = 1)	1,02	1,02	0

Gross income from major products at current prices

Field crops:	Jan. to Dec. 2020	Jan. to Dec. 2021	Change
	R million		%
Maize	37 888	51 889	+37,0
Wheat	10 103	11 371	+12,6
Sugar cane	11 118	11 205	+0,8
Sunflower seed	4 420	5 762	+30,4
Tobacco	352	475	+35,1
All field crops	82 733	105 106	+27,0
Horticulture:			
Vegetables (including potatoes)	29 221	28 739	-1,6
Deciduous and other fruit	24 960	29 176	+16,9
Citrus fruit	27 094	26 078	-3,7
Viticulture	5 785	6 300	+8,9
Subtropical fruit	5 066	5 466	+7,9
All horticultural products	102 408	94 829	3,8
Animal products:			
Poultry meat	49 554	50 957	+2,8
Cattle and calves slaughtered	37 701	43 012	+14,1
Milk	18 859	21 165	+12,2
Eggs	11 336	11 436	+0,9
Sheep slaughtered	8 039	8 141	+1,3
All animal products	145 459	156 507	+7,6

3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 1 January to 31 December 2021. Aggregates are compared with the period 1 January to 31 December 2020.

Gross farming income

Gross farming income refers to both the part of agricultural production that is marketed and production for own consumption, valued at basic prices.

Gross income from all agricultural products increased by 11,3% and is estimated at R367 875 million for the period ended 31 December 2021, compared to R330 598 million the previous year. This was mainly driven by the increase in income earned from all agricultural products.

The income from field crops increased by 27,0%, mainly because of the increases in income from soya beans by 74,1%, grain sorghum by 51,9%, maize by 37,0%, tobacco by 34,9%, sunflower seed by 30,4%, groundnuts by 22,7%, canola by 19,1%, wheat by 12,6% and sugar cane slightly by 0,8%.

The income from animal products increased by 7,6% due to the increase in income from pigs slaughtered by 30,4%, cattle and calves slaughtered by 14,1%, milk by 12,2%, poultry meat by 2,8%, sheep slaughtered by 1,3% and eggs slightly by 0,9%.

The income made from horticultural products increased by 3,8% due to the decrease in income from deciduous and other fruit increased by 16,9%, viticulture by 8,9% and subtropical fruit by 7,9%. The prices of citrus fruit and vegetables decreased by 3,7% and 1,6%, respectively.

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of the goods and services that were purchased to be consumed as inputs during the production process.

The expenditure on intermediate goods and services increased by 7,1% to R204 154 million, from R190 690 million the previous period. This was mainly because of the increase in expenditure on seed and plants and building and fencing material by 10,0% each, fertilisers by 8,2%, maintenance and repairs of machinery and implements by 8,0%, farm feeds by 7,9%, farm services by 6,0%, fuel and packing material by 4,5% each and animal health and crop protection slightly by 0,5%.

Proportionally, farm feeds had the largest share of 35,5% as an expenditure item, farm services by 10,7%, fertilisers by 10,5%, fuel by 8,7%, maintenance and repairs of machinery and implements by 7,1%, seed and plants by 6,8%, building and fencing material by 4,2%, animal health and crop protection by 4,1% and packing material by 4,0%.

Prices received and paid by farmers as well as terms of trade

The prices earned by farmers for their products increased by 5,1%, due to the increase in prices of field crops by 15,2% and animal products by 4,8%. The prices of horticultural products decreased by 1,1%.

The weighted average price of field crops increased by 15,2% as the result of the increases in prices of oilseeds by 36,9%, tobacco by 17,6%, summer grains by 15,2%, dry beans by 11,4%, sugar cane by 10,8%, hay by 10,6% and winter grains by 1,5%. The prices of cotton decreased by 2,3%.

The weighted average price of animal products increased by 4,8%, mainly due to the increase in prices of pastoral products by 24,0%, milk by 13,0%, slaughtered stock by 4,7% and poultry meat by 1,1%.

The weighted average price of horticultural products decreased by 1,1%, mainly because of the decrease in prices of viticulture and fruit by 13,3% and 2,3%, respectively. The prices of vegetables increased by 4,1%.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements as well as intermediate goods, increased by 5,1%. This was influenced by the increases in prices paid for fertilisers by 10,4%, fuel by 8,0%, building material by 6,5%, seeds and irrigation equipment by 5,4% each, trucks by 5,3%, tractors and maintenance and repairs of machinery and implements by 4,3% each, feeds and packing material by 3,8% each and animal health and crop protection by 3,0%.

The terms of trade remained unchanged mainly because of the 5,1% increase in both prices earned from the agricultural products and prices paid for the production inputs.

Net farming income and cash flow

The gross farming income increased by 7,8% and the expenditure on production inputs by 7,1% which resulted in the increase of 23,1% in net farming income. Interest payment increased by 7,2%, labour costs by 4,5% and rent payment by 4,3%.

The cash flow showed an increase of 20,8% and amounted to R127 136 million in 2021, as compared to R105 219 million in 2020.

Conclusion

The increase in gross farming income can be attributed to the increase in income from field crops by 27,0%, animal products by 7,6% and horticultural products by 3,8%. The increases in income from field crops and animal products were driven by the increase in prices and production levels.

On the other hand, the increase in income from horticultural products was the result of the increase in production levels of fruit by 12,1% and viticulture by 8,9%.

4. INDICES OF PRODUCER PRICES OF AGRICULTURAL PRODUCTS

Product	Weight	October		November		December	
		2020	2021	2020	2021	2020	2021
		Index (2015 = 100)					
Field crops	22,8	118,2	128,1	116,7	133,2	116,5	131,5
Horticulture	29,0	154,1	143,0	136,0	131,8	133,3	139,1

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the East London Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2017 to 2021.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Interesting fruit: Papaya

Scientific names: *Carica papaya*

Common names: paw-paw

History: The papaya is believed to have originated in southern Mexico and eastern Central America. By the time the Spanish arrived, the fruit had already spread throughout Central America and into South America. The Spanish were the first to introduce it to Asia in the sixteenth century via the Philippines.

From there, the fruit spread to India and eventually to Europe. By the nineteenth century, the fruit was already being grown in all tropical regions throughout the world. Today, the fruit can be found in a variety of cultures and their foods, ranging from savoury to the sweet dishes.

Description: Papaya is a tropical fruit, have an oval or pear shape, measures between 10 and 20 cm and usually weigh between 500 g and 1 kg, although it may even weigh up to 5 kg. It is a berry with a thin skin and has a green yellowish and orange colour. The pulp has a red orange or yellow colour and is sweet and very juicy.

Papaya is a shrub that grows quickly, and can grow up to 10 m high in a short time. It has a thin, turgid, greyish stem and large leaves formed by several lobes. Three types of papaya are distinguished, some with feminine flowers, some others with masculine flowers and the rest bearing hermaphrodite flowers. The fruit is a great berry with a yellowish colour and a sweet and juicy pulp.

The leaves are dissected and clustered in the apex of the trunk and branches; it is characterised by having a long petiole. They measure between 25 and 75 cm in diameter and are composed of 7 to 11 great lobes. The upper side of the leaf has a bright dark green or yellowish green colour, whereas underneath it has a pale yellow green colour. The petiole is long, around 25 to 100 cm long and 0,5 to 1,5 cm in diameter.

Cultivation: Papayas are usually grown from seed. Their development is rapid, with fruit being produced before the end of the first year. Under favourable conditions, a plant may live five years or longer. In cultivation, it grows rapidly, fruiting within three years. It is, however, highly frost-sensitive, limiting its production to tropical climates. Temperatures below -2 °C (29 °F) are greatly harmful, if not fatal.

Health benefits:

Asthma prevention: The risk of developing asthma is lower in people who consume a large amount of certain nutrients. One of these nutrients is beta-carotene, contained in foods like papaya, apricots, broccoli, cantaloupe, pumpkin and carrots.

Cancer: Consuming the antioxidant beta-carotene found in papayas may reduce cancer risk. Among younger men, diets rich in beta-carotene may play a protective role against prostate cancer, according to a study published in the journal, "*Cancer Epidemiology and Prevention Biomarkers*".

Bone health: Low intakes of vitamin K have been associated with a higher risk of bone fracture. Adequate vitamin K consumption is important for good health, as it improves calcium absorption and may reduce urinary excretion of calcium, meaning there is more calcium in the body to strengthen and rebuild bones.

Digestion: Papayas contain an enzyme called papain that aids digestion; in fact, it can be used as a meat tenderiser. Papaya is also high in fibre and water content, both of which help to prevent constipation and promote regularity and a healthy digestive tract.

Heart disease: The fibre, potassium and vitamin content in papaya all help to ward off heart disease. An increase in potassium intake along with a decrease in sodium intake is the most important dietary change that a person can make to reduce their risk of cardiovascular disease.
