ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Areas planted and fourth production forecast for summer crops for the 2016 production season

According to the fourth production forecast for summer crops by the Crop Estimates Committee (CEC) for the 2016 production season, the expected commercial **maize** crop was 7,054 million tons, which is 29,1% or 2,901 million tons less than the 9,955 million tons of the 2015 season. The estimated area planted to maize by South African commercial maize producers during the 2016 season is 1,947 million ha—26,6% or 706 100 ha less than the 2,653 million ha planted the previous season.

The ratio of white to yellow maize plantings was estimated at 52:48. The estimated white maize plantings were 1,015 million ha, which is a decrease of 29,9% from the previous season's plantings of 1,448 million ha. Yellow maize plantings were estimated to be 932 000 ha—22,6% less than the 1,205 million ha for 2015.

During the 2016 production season, most of the country's maize crop was planted in the Free State (36,0%), Mpumalanga (25,2%) and North West (22,6%) provinces. The plantings of maize decreased by 42,6%, from 1,220 million ha to 700 000 ha in the Free State Province, and increased by 4,5%, from 469 000 ha to 490 000 ha in the Mpumalanga province. Plantings in the North West are estimated at 440 000 ha—a decrease of 32,3% from the 650 000 ha planted for the 2015 season.

The production forecast for white maize was 3,067 million tons, which is 35,2% less than the 4,735 million tons of the previous season. The expected yield for white maize was 3,02 t/ha, as against 3,27 t/ha in 2015. In the case of yellow maize, the production forecast was 3,987 million tons, which is 23,6% less than the 5,220 million tons the previous season. The yield for yellow maize was expected to be 4,28 t/ha, as against 4,33 t/ha for 2015.

A **sunflower seed** crop of 730 500 tons was expected, which is 10,2% more than the 663 000 tons of the previous season. The area planted to sunflower seed was estimated at 718 500 ha, which is 24,7% higher than the 576 000 ha planted for 2015. The expected yield for 2016 was 1,02 t/ha, as against 1,15 t/ha in 2015.

The production forecast for **soya beans** was 694 550 tons, which is 35,1% less than the 1 070 000 million tons of the previous season. The estimated area planted to soya beans was 502 800 ha, which is 26,8% or 184 500 ha less than the 687 300 ha planted for 2015. The expected yield was 1,38 t/ha, as against 1,56 t/ha in 2015.

The expected **groundnut** crop was 32 550 tons, which is 47,8% less than the 62 300 tons of the 2015 season. The area planted to groundnuts was estimated at 22 600 ha, which is 61,0% or 35 400 ha less than the 58 000 ha planted the previous season. The expected yield was 1,44 t/ha, as against 1,07 t/ha in 2015.

The production forecast for **sorghum** was 88 500 tons—26,6% less than the 120 500 tons of the previous season. The area planted to sorghum was estimated to be 48 500 ha, which is 31,2% or 22 000 ha less than the 70 500 ha planted for 2015. The expected yield was 1,82 t/ha, as against 1,71 t/ha the previous season.

The production of **dry beans** was expected to be 38 095 tons—48,1% less than the 73 390 tons of the previous season. The estimated area planted was 34 400 ha, or 46,2% less than the 64 000 ha planted the previous season, with an expected yield of 1,11 t/ha for 2016, as against a yield of 1,15 t/ha in 2015.

Area estimate and fourth production forecast of summer crops: 2016 production season*

Crop	Area planted 2016	Fourth forecast 2016	Area planted 2015	Final crop 2015	Change – tons 2016 *vs* 2015
	ha	tons	ha	tons	%
White maize	1 014 750	3 067 475	1 448 050	4 735 000	-35,2
Yellow maize	932 000	3 986 900	1 204 800	5 220 000	-23,6
Total maize	1 946 750	7 054 375	2 652 850	9 955 000	-29,1
Sunflower seed	718 500	730 500	576 000	663 000	+10,2
Soya beans	502 800	694 550	687 300	1 070 000	-35,1
Groundnuts	22 600	32 550	58 000	62 300	-47,8
Sorghum	48 500	88 500	70 500	120 500	-26,6
Dry beans	34 400	38 095	64 000	73 390	-48,1

* Forecasts and estimates exclude the non-commercial sector.

Intended plantings of winter crops for the 2016 production season

The CEC released the intended plantings of winter crops on 26 April 2016. The figures were based on replies received from a sample of producers. The survey, which was undertaken by the Directorate: Statistics and Economic Analysis of the Department of Agriculture, Forestry and Fisheries, gives an indication of the plantings intended by commercial farmers as at the middle of April 2016.

Intended plantings of **wheat** were 481 850 ha, which is 0,1% less than the 482 150 ha planted in 2015. The main wheat-producing areas are within the Western Cape with 320 000 ha (66,4%), followed by the Free State with 80 000 ha (16,6%) and the Northern Cape with 34 000 ha (7,1%).

The area expected to be planted to **malting barley** was 92 000 ha, which is a decrease of 1,8% or 1 730 ha from the 93 730 ha of the previous season.

The intended plantings of **canola** were 71 050 ha, which is 9,0% or 7 000 ha less than the 78 050 ha planted during 2015.

Intended plantings of winter cereals for the 2016 production season

Crop	Intended plantings* 2016	Area planted 2015	Final crop 2015	Change – ha 2016 *vs* 2015
	ha	ha	tons	%
Wheat	481 850	482 150	1 440 000	-0,1
Malting barley	92 000	93 730	332 000	-1,8
Canola	71 050	78 050	93 000	-9,0

*Based on conditions at the middle of April 2016

2. ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	April 2014 to March 2015	April 2015 to March 2016	% change
Total gross farm income (R million)	223 529	234 648	+5,0
Intermediate expenditure (R million)	118 156	126 396	+7,0
Total farm cost (R million)	149 037	159 401	+7,0
Net farm income (R million)	78 961	79 130	+0,2
Domestic terms of trade (2010 = 1)	1,01	1,08	+6,9

Gross income from major products at current prices

	April 2014 to March 2015	April 2015 to March 2016	Change
Field crops	R million		%
Maize	28 472	25 788	-9,4
Wheat	5 385	5 303	-1,5
Sugar cane	7 014	6 042	-13,9
Sunflower seed	3 788	3 096	-18,3
Tobacco	467	418	-10,4
All field crops	56 884	51 587	-9,3
Horticulture			
Vegetables (including potatoes)	18 168	20 904	+15,1
Deciduous and other fruit	15 745	17 981	+14,2
Citrus fruit	12 673	14 207	+12,1
Viticulture	4 727	4 673	-1,1
Subtropical fruit	3 546	3 410	-3,9
All horticultural products	60 282	66 974	+11,1
Animal products			
Poultry meat	35 944	39 499	+9,9
Cattle and calves slaughtered	25 754	29 426	+14,3
Milk	14 546	13 905	-4,4
Eggs	9 367	9 985	+6,6
Sheep slaughtered	6 014	6 055	+0,7
All animal products	106 362	116 088	+9,1

3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic changes in the agricultural sector from the period 1 April 2014 to 31 March 2015 to the period 1 April 2015 to 31 March 2016.

Gross farming income

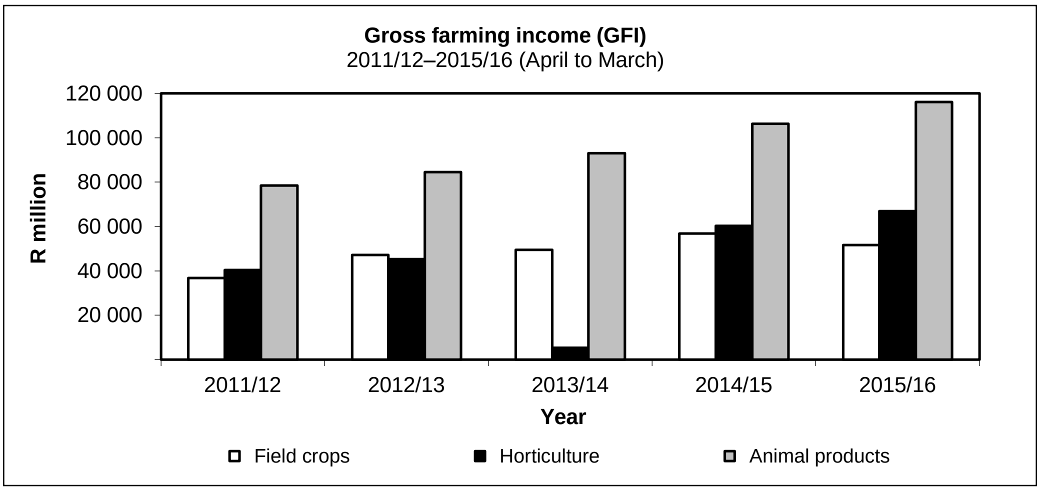
Gross farming income refers to the agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross income from all agricultural products increased by 5,0% and amounted to R234 648 million for the year ended 31 March 2016. This was mainly a result of the increase in horticultural and animal products by 11,1% and 9,1%, respectively.

The gross income from field crops decreased by 9,3% from R56 884 million to R51 587 million, mainly due to the decrease in income derived from grain sorghum by 58,8%, groundnuts by 22,9%, dry beans by 20,6%, sunflower seed by 18,3%, soya beans by 14,5%, sugar cane by 13,9%, tobacco by 10,4%, maize by 9,4% and wheat slightly by 1,5%.

The income from horticultural products increased by 11,1%, from R60 282 million to R66 974 million. This was caused by the increase in income from vegetables by 15,1%, deciduous and other fruit by 14,2% and citrus fruit by 12,1%. The income from subtropical fruit and viticulture decreased by 3,9% and 1,1%, respectively.

The income from animal products increased by 9,1%, from R106 362 million to R116 088 million, as a result of the increase in income from cattle and calves slaughtered by 14,3%, poultry meat by 9,9%, eggs by 6,6% and sheep slaughtered slightly by 0,7%. However, the income from milk decreased by 4,4%.



Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of the goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased by 7,0% and amounted to R126 396 million for the period under review. Expenditure on building and fencing material increased by 11,3%, seed and plants by 10,0%, packing material by 9,0%, farm feeds by 8,0%, farm services and animal health and crop protection by 6,0% each, fuel by 5,2%, maintenance and repairs of machinery and implements by 5,0% and fertilisers by 3,0%.

Expenditure on farm feeds was the biggest expenditure item, accounting for 28,9% of the total expenditure on intermediate inputs, followed by maintenance and repairs of machinery and implements by 13,9%, farm services by 12,4%, fuel by 8,9%, animal health and crop protection and seed and plants by 6,3% each, fertilisers by 5,2%, packing material by 4,6% and building and fencing material by 3,9%.

Prices received and prices paid by farmers, as well as terms of trade

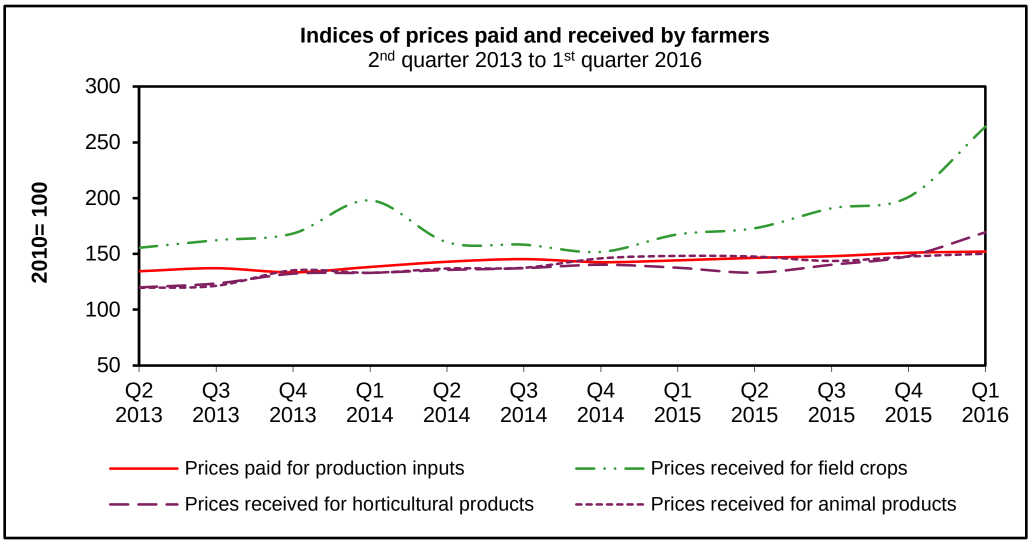
On average, prices received by farmers for their products increased by 11,1%. The weighted average price of field crops increased by 29,9%, mainly as a result of the increase in prices of summer grains by 49,8%, winter grains and oilseeds by 13,4% each, sugar cane by 9,2%, tobacco by 5,9%, cotton by 4,3% and hay by 3,6%. The price of dry beans decreased by 5,5%.

Prices of horticultural products increased by 7,3% because of the increase in prices of vegetables, fruit and viticulture by 10,6%, 6,4% and 1,0%, respectively.

The prices of animal products increased on average by 3,6% as a result of the increase in prices of pastoral products, slaughtered stock and poultry by 20,2%, 6,0% and 3,5%, respectively. The price of milk decreased by 5,5%.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements and intermediate goods and services increased by 3,9% compared to 5,8% the previous year. Prices of tractors increased by 9,1%, building material by 8,7%, trucks by 5,6%, animal health and crop protection by 5,2%, fencing material by 4,9%, feeds by 4,7%, maintenance and repairs and seeds by 4,6% each, packing material by 4,2% and fertilisers by 2,5%. The price of fuel showed a decrease of 2,6%.

The 11,1% increase in prices received, compared to 3,9% increase in prices paid by the farmers, resulted in the increase of 6,9% in the domestic terms of trade.



Net farm income and cash flow

The increase of 5,0% in gross farming income against an increase of 7,0% in expenditure on intermediate production inputs resulted in a slight increase of 0,2% in net farming income to R79 130. Interest payments increased by 9,3% while labour costs and rent payments increased by 5,2% each.

The farmers' cash flow for the period April 2015 to March 2016 increased by 1,6%, to R82 209 million, from R80 891 million in the previous period.

Conclusion

The increase in gross farming income was a result of the increase in income derived from horticultural and animal products, which was caused by the increase in production levels and prices of horticultural and animal products. The prices of field crops also increased.

On the other hand, the production levels of field crops dropped substantially, with maize by 29,0%, sunflower seed by 21,7%, wheat by 19,9%, groundnuts by 17,0% and dry beans by 12,1%. The decrease in production of field crops can be attributed to dry weather conditions experienced in the areas producing these crops during the period under review.

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on the major fresh produce markets and to make comparisons between markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Cape Town Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2011 to 2015.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Ms Mahlatse Makaleng

Interesting fruit: Dates

Scientific name: *Phoenix dactylifera*

Common names: date, date palm

History: Dates have been a staple food in the Middle East and the Indus Valley for thousands of years. There is archaeological evidence of date cultivation in eastern Arabia in 6 000 BCE. They are believed to have originated near what is now Iraq and have been cultivated since ancient times from Mesopotamia to prehistoric Egypt, possibly as early as 4 000 BCE.

In later times, traders spread dates around southwest Asia, northern Africa, and Spain. Dates were introduced into Mexico and California by the Spaniards in 1765, around the same time Mission San Ignacio was founded. Fossil records show that the date palm has existed for at least 50 million years.

Historical uses: The Ancient Egyptians used the fruit to make date wine and ate them at harvests.

Description: The date palm, *Phoenix dactylifera*, is an erect palm tree in the family Arecaceae grown for its edible fruit, the date. The trunk of the tree is covered by upward-pointing, overlapping, woody leaf bases and terminates in a crown of 20 to 30 leaves. The leaves are feather-like with spiny petioles and a thick midrib.

The leaf blades are pinnately divided and are blue-green in color. The uppermost leaves of the crown stand more erect while the lower ones droop and recurve toward the trunk. The tree produces small, fragrant, cream-white flowers and the inflorescence may possess as many as 10 000 flowers.

The fruit are produced in clusters and are oblong to ovoid berries with single stones and reddish-brown flesh. Date palms can grow to a height of 30 m (98 ft.) and can live for up to 150 years, although they are usually replaced in commercial plantations when their productivity begins to decline. The date palm is believed to have originated from Western Asia.

Climate: The date palm requires a lot of sunlight. It cannot live in the shade. It will grow in all warm climates where the temperature rarely falls down to 20°F (-6,67 °C). Commercial fruit production is possible only where there is a long, hot growing season with daily maximum temperatures of 90°F (32,22 °C) and virtually no rain—less than 1/2 in (1,25 cm) in the ripening season.

The date can tolerate long periods of drought; however, it has a high water requirement for heavy bearing.

Food uses: Dry or soft dates are eaten out-of-hand, or may be pitted and stuffed with fillings such as almonds, walnuts, pecans, candied orange and lemon peel, tahini, marzipan or cream cheese. Pitted dates are also referred to as stoned dates.

Partially dried pitted dates may be glazed with glucose syrup and eaten as a snack. Dates can also be chopped and used in a range of sweet and savory dishes.

Young leaves are cooked and eaten as a vegetable, as is the terminal bud or heart, though its removal kills the palm. In India, date seeds are roasted, ground and used to adulterate coffee. The finely ground seeds are mixed with flour to make bread in times of scarcity.

Nutritional value: Dates are a good source of various vitamins and minerals. It is a good source of energy, sugar and fiber. Essential minerals such as calcium, iron, phosphorus, sodium, potassium, magnesium and zinc are found in dates. They also contain vitamins such as thiamin, riboflavin, niacin, folate, vitamin A and vitamin K.

Other uses: Date seeds have been soaked in water until soft and then fed to horses, cattle, camels, sheep and goats. Dried and ground up, they are now included in chicken feed.

Dates are consumed as a fresh or dry fruit. They are considered a staple in the deserts of North Africa and the Middle East. The fruit may also be used to make juice concentrates, fermented products (e.g. wines) or pastes for use in baking and confection

Health benefits:

Constipation: Dates are often categorised as a laxative food. This is why dates are so frequently eaten by people suffering from constipation. In order to achieve the desired laxative effect of dates, you should soak them in water overnight. Then, eat the soaked dates in the morning like syrup to get the most optimal results. Dates have high levels of soluble fiber, which is essential in promoting healthy bowel movements and the comfortable passage of food through the intestinal tract, which can relieve symptoms of constipation.

Bone health and strength: The significant amounts of minerals found in dates make it a super food for strengthening bones and fighting off painful and debilitating diseases like osteoporosis. Dates contain selenium, manganese, copper and magnesium, all of which are integral to healthy bone development and strength, particularly as people begin to age and their bones gradually weaken. So, eat your dates and give a boost to your bones!

Diarrhea: Ripe dates contain potassium, which is known as an effective way of controlling diarrhea. They are also easy to digest, which further helps alleviate the unpredictable nature of chronic diarrhea. The soluble fiber in dates can also help relieve diarrhea by providing bulk to the bowel movements and promoting the normal, healthy functioning of the excretory system.

Abdominal cancer: Research has pointed towards dates being a legitimate way to reduce the risk and impact of abdominal cancer. They work as a useful tonic for all age groups and in some cases, they work better than traditional medicines and are natural, so they don't have any negative side effects on the human body. They can be quickly and easily digested for a quick boost of energy.

Although dates carry tremendous nutritional values, great care should be taken in their selection because their surface is very sticky, which often attracts various impurities. Therefore, you should only consume dates that are processed and packaged properly. Also, make sure to wash them thoroughly before you eat them, as this will help remove the impurities present on the surface
