1. CROP ESTIMATES AND FORECASTS

Areas planted and third production forecast for summer crops for the 2019 production season

According to the third production forecast for summer crops by the Crop Estimates Committee (CEC) for the 2019 production season, the expected commercial **maize** crop was 10,655 million tons, which is 14,8% or 1,855 million tons less than the 12,510 million tons of the 2018 season. The estimated area planted to maize by South African commercial maize producers during the 2019 season is 2,300 million ha—0,8% or 18 350 ha less than the 2,319 million ha planted the previous season. The expected yield is 4,63 t/ha.

The ratio of white to yellow maize plantings was estimated at 56:44. The estimated white maize plantings were 1,298 million ha, which is an increase of 2,4% from the previous season's plantings of 1,268 million ha. Yellow maize plantings were estimated to be 1,002 million ha—4,6% less than the 1,051 million ha for 2018.

Intended plantings of winter crops for the 2019 production season

Producers' intentions to plant winter cereals are based on the results of a non-probability survey conducted by the Directorate: Statistics and Economic Analysis of the Department of Agriculture, Forestry and Fisheries and reflects the position as at the middle of April 2019.

The figures for wheat represent the total number of hectares that are intended to be planted for grain, <u>excluding</u> any hectares that will be planted for fodder and grazing.

Early indications are that producers intend to plant 513 450 ha of **wheat** for the 2019 season. This is 2,0% or 10 100 ha more than 503 350 ha planted to wheat in 2018. The main producing areas are within the Western Cape with 324 000 ha (63%), followed by the Free State with 105 000 ha (20%) and the Northern Cape with 34 000 ha (7%).

The expected area planted to **malting barley** is 118 500 ha, which is 0,4% or 500 ha less than the 119 000 ha of the previous year. The expected area planted to **canola** is 80 000 ha, which is 3,9% or 3 000 ha more than the 77 000 ha planted in 2018.

Please note that the preliminary area estimate of winter crops for 2019 will be released on 25 July 2019.

3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic changes in the agricultural sector from the period 1 April 2017 to 31 March 2018 to the period 1 April 2018 to 31 March 2019.

Gross farming income

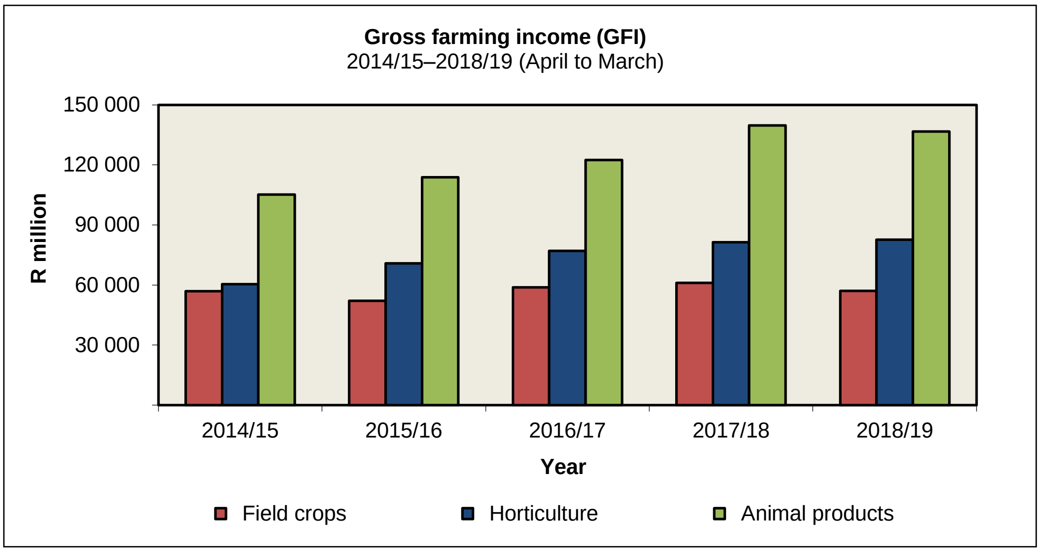
Gross farming income refers to the agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross income made from all agricultural products decreased by 2,0% to R276 521 million for the year ended 31 March 2019, largely because of the decrease in income from field crops by 6,5% and animal products by 2,2%.

The decrease in income from field crops was the result of the decrease in income from groundnuts by 39,1%, maize by 24,1%, hay by 5,2%, dry beans by 2,9%, tobacco by 1,3% and sugar cane by 1,2%.

A decrease in income from animal products by 2,2% was mainly caused by the decrease in income derived from milk by 11,1%, sheep slaughtered by 9,2% and cattle and calves slaughtered by 4,8%.

The income from horticultural products increased by 1,6%, as the result of the increase in income from subtropical fruit by 19,6%, citrus fruit by 8,0% and vegetables by 3,8%.



Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of the goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased by 6,3% to R152 743 million for the period ended 31 March 2019. This was the result of the increase in expenditure on seed and plants and building and fencing material by 10,0% each, packing material by 9,0%, maintenance and repairs of machinery and implements by 8,1%, farm services and animal health and crop protection by 6,0% each, farm feeds by 3,8%, fuel by 3,1% and fertilisers by 3,0%.

Farm feeds remained the largest expenditure item, accounting for 28,6% of the total expenditure on intermediate inputs, followed by maintenance and repairs of machinery by 13,8%, farm services by 12,2%, fuel by 8,5%, seed and plants by 6,9%, animal health and crop protection by 6,2%, packing material by 4,9%, fertilisers by 4,7% and building and fencing material by 4,2%.

Prices received and prices paid by farmers, as well as terms of trade

Prices received by the farmers for their products increased marginally on average by 0,7% as the result of the increase in prices of horticultural products and field crops by 5,6% and 2,7%, respectively.

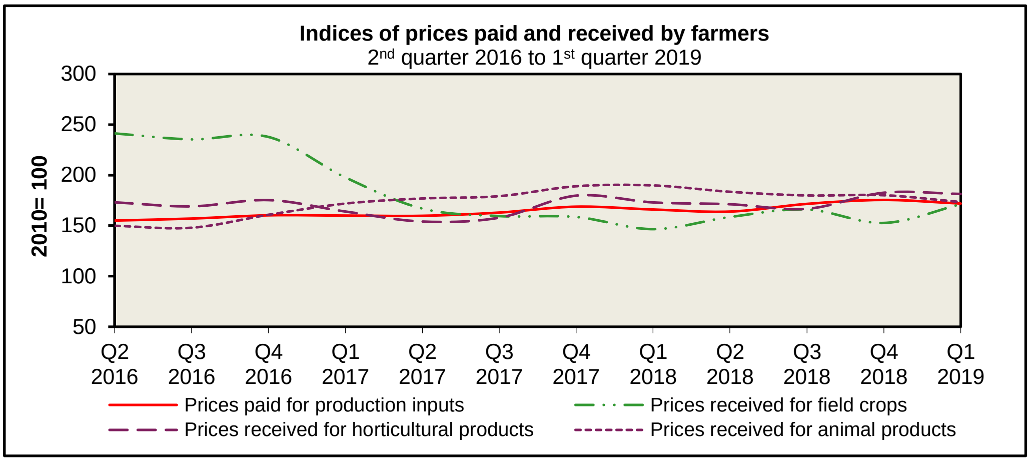
The increase in prices of horticultural products was influenced by the increase in prices of viticulture by 19,9% and vegetables by 12,0%. Prices of fruit decreased slightly by 0,1%.

The increase in prices of field crops by 2,7% was caused by the increase in prices of summer grains by 8,4%, hay by 4,1%, winter grains by 3,1%, tobacco by 2,4% and oilseeds slightly by 0,5%. The prices of sugar cane, dry beans and cotton decreased by 11,1%, 2,7% and 1,8%, respectively.

The prices of animal products decreased on average by 2,5% due to the decrease in prices of milk by 12,7%, poultry meat by 1,9% and slaughtered stock by 1,0%. The prices of pastoral products increased substantially by 27,4%.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements and intermediate goods and services increased by 3,8% for the period ended March 2019. Prices of trucks increased by 7,1%, fuel by 6,3%, animal health and crop protection by 6,0%, building material by 5,8%, fencing material by 5,3%, packaging material by 5,2%, maintenance and repairs and seeds by 4,2% each, and tractors, fertilisers and feeds by 2,0% each.

Domestic terms of trade weakened by 2,9% as the result of a slight increase of 0,7% in prices received by the farmers for their products, opposed to a 3,8% increase in prices paid for their production inputs.



Net farm income and cash flow

The net farming income decreased substantially by 15,7% for the period under review, compared to an increase of 20,5% the previous period. This was mainly driven by the increase in prices paid for the agricultural inputs by 3,8%, as opposed to a mere increase of 0,7% in prices received by the farmers. Interest payments increased by 10,2%, while labour costs and rent payments increased by 4,4% each.

The farmers' cash flow decreased by 15,3% and was estimated at R92 001 million, from R108 648 million the previous period.

Conclusion

Gross farming income decreased by 2,0%, largely due to the decrease in income derived from both field crops and animal production by 6,5% and 2,2%, respectively. A decrease in income from field crops was the result of the decrease in production levels of groundnuts by 38,7%, maize (30,7%), grain sorghum (25,6%), hay (7,2%) and tobacco (0,2%), while the decrease in income from animal production can be attributed to the decrease in prices of milk by 12,7%, poultry meat by 1,9% and slaughtered stock by 1,0%.

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the East London Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2014 to 2018.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:
