SECTION A

ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Areas planted and sixth production forecast for summer crops for the 2015 production season

According to the sixth production forecast for summer crops by the Crop Estimates Committee (CEC) for the 2015 production season, the expected South African **maize** crop was 9,755 million tons, which was 31,5% less than the 14,250 million tons of the 2014 season and 20,5% or 2,516 million tons less than the five-year average of 12,271 million tons up to 2014.

The estimated area that South African commercial producers planted to maize during the 2015 season was 2,653 million ha. This was 1,3% or 35 350 ha less than the 2,688 million ha planted in the previous season. Of this area, 1,220 million ha (46,0%) were in the Free State, 650 000 ha (24,5%) in the North West and 469 000 ha (17,7%) in the Mpumalanga provinces.

The plantings of maize in the Free State increased by an estimated 2,1%, from 1,195 million ha in 2014 to 1,220 million ha in 2015, and in the North West it decreased by 2,3%, from 665 000 ha to 650 000 ha. Plantings in Mpumalanga came to an estimated 469 000 ha—a decrease of 6,2% from the 500 000 ha planted in 2014.

The ratio of white to yellow maize plantings for 2015 is 55:45, as against 58:42 the previous season. The estimated white maize plantings were 1,448 million ha, which were 6,6% less than the previous season's 1,551 million ha, while the yellow maize plantings were estimated to be 1,205 million ha—6,0% more than the 1,137 million ha for 2014.

Most of the country's maize crop was produced in the Free State (39,8%), Mpumalanga (24,4%) and North West (15,0%) provinces.

The production forecast for white maize was 4,650 million tons, which was 39,7% or 3,060 million tons less than the 7,710 million tons of 2014 and 2,171 million tons less than the average of the five years up to 2014. The expected yield for white maize was 3,21 t/ha, as against 4,97 t/ha the previous season.

In the case of yellow maize, the production forecast was 5,106 million tons, which was 21,9% or 1,434 million tons less than the 6,540 million tons the previous season and 345 260 tons less than the five-year average up to 2014. The yield for yellow maize was expected to be 4,24 t/ha, as against 5,75 t/ha in 2014.

The expected **sunflower seed** crop was 656 800 tons, which was 21,1% less than the 832 000 tons of the previous season and 0,7% more than the average of 652 200 tons for the five years up to 2014. The area planted to sunflower seed was estimated at 576 000 ha, which was 3,8% less than the 598 950 ha planted in 2014. The expected yield was 1,14 t/ha, as against 1,39 t/ha the previous season.

The production forecast for **soya beans** was 1,042 million tons, which was 9,9% more than the 948 000 tons of the previous season. The estimated area planted was 687 300 ha, which was 36,7% or 184 400 ha more than the 502 900 ha planted in 2014. The expected yield was 1,52 t/ha, as against 1,89 t/ha in 2014.

The expected **groundnut** crop was 56 675 tons, which was 23,9% or 17 825 tons less than the 74 500 tons of the 2014 season and 8 775 tons less than the five-year average of 65 450 tons per annum up to 2014. The area planted to groundnuts was an estimated 58 000 ha, which was 11,3% or 5 875 ha more than the 52 125 ha planted the previous season. The expected yield was 0,98 t/ha, as against 1,43 t/ha in 2014.

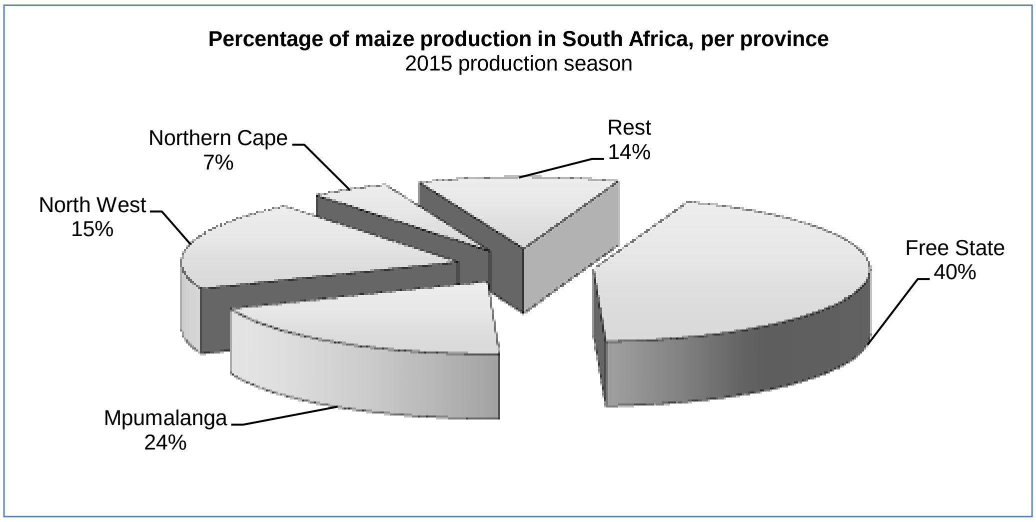
The production forecast for **sorghum** was 114 700 tons—56,7% less than the 265 000 tons of the previous season. The area planted to sorghum was estimated to be 70 500 ha, which was 10,6% or 8 350 ha less than the 78 850 ha planted in 2014. The expected yield was 1,63 t/ha, as against 3,36 t/ha the previous season.

The production of **dry beans** was expected to be 73 390 tons, which was 10,6% or 8 740 tons less than the 82 130 tons of the previous season and 16 538 tons more than the five-year average of 56 852 tons per annum up to 2014. The estimated area planted was 64 000 ha, which was 14,7% more than the 55 820 ha planted the previous season. The expected yield was 1,15 t/ha, as against 1,47 t/ha for 2014.

Area estimate and sixth production forecast of summer field crops: 2015 production season*

Crop	Area planted 2015	Sixth forecast 2015	Area planted 2014	Final crop 2014	Change – tons 2015 *vs* 2014
	ha	tons	ha	tons	%
White maize	1 448 050	4 649 800	1 551 200	7 710 000	-39,7
Yellow maize	1 204 800	5 105 500	1 137 000	6 540 000	-21,9
Total maize	2 652 850	9 755 300	2 688 200	14 250 000	-31,5
Sunflower seed	576 000	656 800	598 950	832 000	-21,1
Soya beans	687 300	1 041 600	502 900	948 000	+9,9
Groundnuts	58 000	56 675	52 125	74 500	-23,9
Sorghum	70 500	114 700	78 850	265 000	-56,7
Dry beans	64 000	73 390	55 820	82 130	-10,6

* Forecasts and estimates exclude the non-commercial sector.



Preliminary estimate of the area planted to winter cereal crops for the 2015 production season

The CEC also released the preliminary area estimate for winter crops on 28 July 2015.

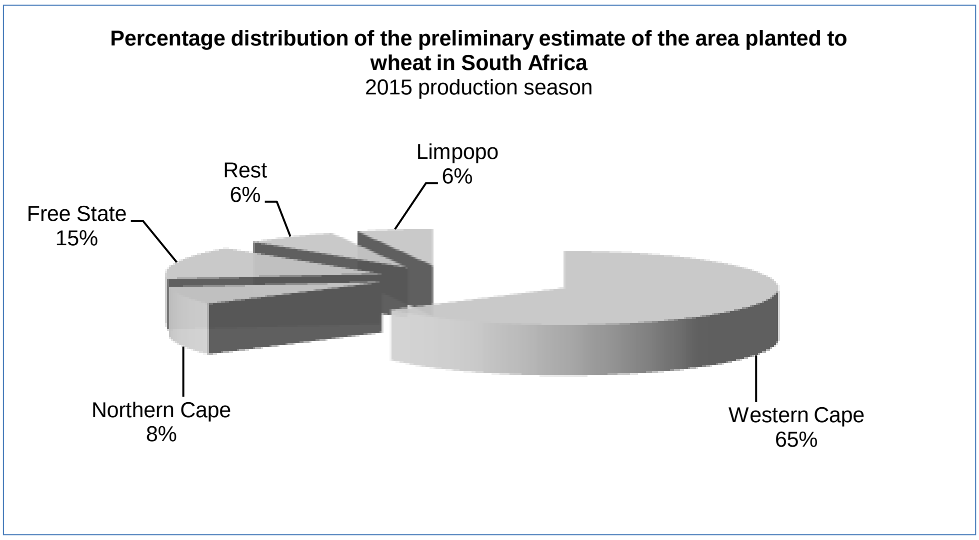
The estimate for **wheat** was 478 300 ha, which is 0,4% more than the 476 570 ha planted in 2014. This is the second smallest area planted to wheat since the early 1930s. The main wheat-producing area was in the Western Cape, with 312 500 ha (65,3%), followed by the Free State with 73 000 ha (15,3%) and the Northern Cape with 37 000 ha (7,7%).

The preliminary area estimate for **malting barley** was 90 350 ha, which was 6,1% more than the 85 125 ha of the 2014 season.

The area planted to **canola** was estimated at 87 000 ha, a decrease of 8,4% from the previous season's plantings of 95 000 ha.

Preliminary area estimate of winter cereals for the 2015 production season

Crop	Area planted 2015	Area planted 2014	Final crop 2014	Change—ha 2015 *vs* 2014
	ha	ha	tons	%
Wheat	478 300	476 570	1 750 000	+0,4
Malting barley	90 350	85 125	302 000	+6,1
Canola	87 000	95 000	121 000	-8,4



2. ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	July ’13 to June ’14	July ’14 to June ’15	% change
Total gross farming income (R million)	202 565	221 890	+9,5
Expenditure on intermediate goods and services (R million)	111 059	118 212	+6,4
Total farming cost (R million)	140 452	149 605	+6,5
Net farming income (R million)	66 862	77 063	+15,3
Domestic terms of trade (2010 = 1)	1,02	1,01	-1,0

Gross income from major products at current prices

Field crops (R million)	July ’13 to June ’14	July ’14 to June ’15	% change
Maize	23 560	27 701	+17,6
Wheat	5 420	5 220	-3,7

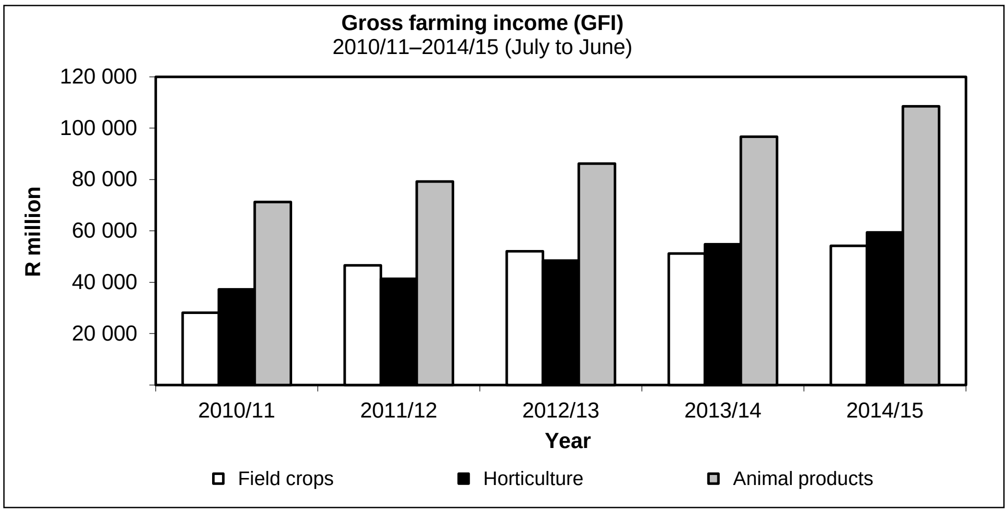
3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 01 July 2014 to 30 June 2015. Aggregates are compared with the period 01 July 2013 to 30 June 2014.

Gross farming income

Gross farming income refers to that part of agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross income from all agricultural products amounted to R221 890 million for the year ended 30 June 2015, which is an increase of 9,5% from the previous year. This increase was a result of the increase in gross income from animal products by 12,2%, horticultural products by 8,4% and field crops by 5,6%.



The gross income from field crops increased by 5,6% and amounted to R54 108 million, mainly because of the increases in income from tobacco by 19,8% and maize by 17,4%. The income from groundnuts decreased by 25,0%, from R653 million to R490 million, sunflower seed by 12,0%, soya beans by 6,6%, from R5 190 million to R4 861 million, dry beans by 5,1%, from R1 005 million to R954 million, sugar cane by 3,8%, from R7 315 million to R7 039 million and wheat by 3,7%.

The gross income from horticultural products increased by 8,4%, as a result of the increases in income from deciduous and other fruit by 17,2%, citrus fruit by 9,9%, subtropical fruit by 5,4%, and vegetables by 2,6%. However, the income from vegetables decreased slightly by 1,4%,

The gross income from animal products increased by 12,2%, from R96 598 million to R108 429 million. The income from sheep slaughtered rose by 23,3%, from R5 058 million to R6 238 million, milk by 16,3%, from R12 708 million to R14 775 million, cattle and calves slaughtered by 15,9%, from R22 718 million to R26 335 million, poultry meat by 10,8%, from R33 027 million to R36 589 million and eggs by 6,3%, from R8 883 million to R9 439 million.

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased by 6,4%, from R111 059 million to R118 212 million for the year ended on 30 June 2015. Expenditure on building and fencing material increased by 10,5%, seed and plants by 10,0%, packing material by 9,0%, farm feeds by 8,0%, farm services and animal health and crop protection by 6,0% each, fuel by 5,3%, maintenance and repairs on machinery and implements by 5,0% and fertilisers by 3,0%.

Farm feeds remained the major expenditure item, accounting for 29,1%, followed by maintenance and repairs on machinery and implements (14,3%), farm services (12,7%), fuel (7,5%), animal health and crop protection (6,5%), seed and plants (6,2%), fertilisers (5,5%), packing material (4,7%) and building and fencing material (3,9%).

Prices received and paid by farmers

On average, prices received by farmers for their products increased by 4,0%.

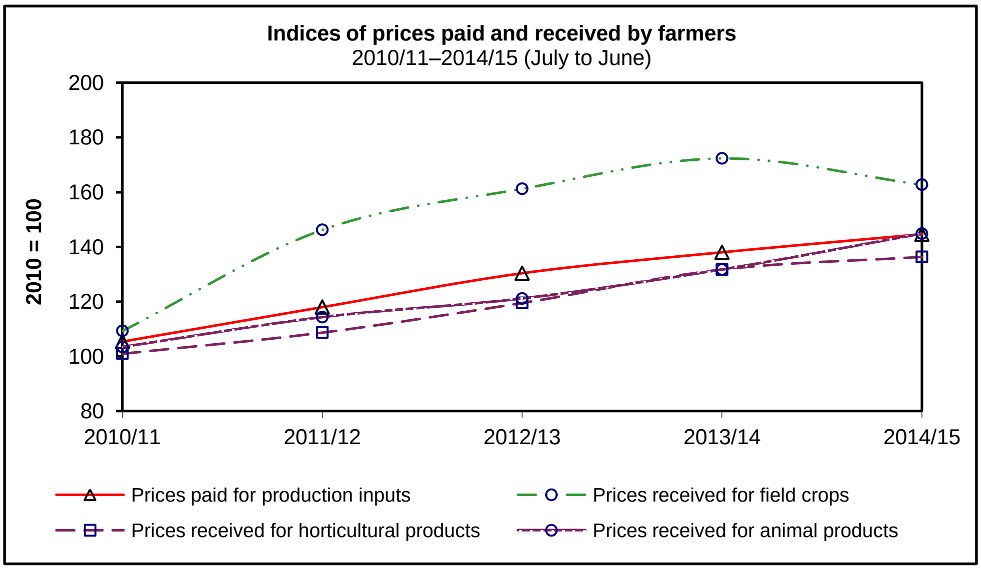
The weighted average price of field crops decreased by 5,6%. The prices of hay increased by 14,7%, tobacco by 13,8%, sugar cane by 11,9%, cotton by 7,4% and winter grains slightly by 0,7%. The prices of summer grains decreased by 13,2%, oilseeds by 8,6% and dry beans by 1,2%.

Prices of horticultural products increased by 3,5%. The prices of fruit increased by 7,8% and viticulture by 1,3%, while the prices of vegetables decreased by 2,4%.

Prices of animal products increased by 10,0%. The average price of dairy products increased by 12,7%, slaughtered stock by 12,1%, poultry by 8,2% and pastoral products by 4,6%.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements as well as intermediate goods and services, increased by 4,8%, compared to 5,9% the previous year. Prices of trucks increased on average by 10,0%, tractors by 8,9%, fencing material by 6,0%, building material by 5,8%, seeds by 5,5%, farm feeds and animal health and crop protection by 5,4% each, packing material by 5,2%, maintenance and repairs by 4,8% and fertilisers by 2,5%. The prices of fuel remained unchanged.

The domestic terms of trade decreased slightly by 1,0%, from 1,02 to 1,01.



Farming income and cash flow

An increase of 9,5% in gross farming income and 6,4% in expenditure on intermediate production inputs resulted in an increase of 15,3% in net farming income, from R66 862 million to R77 063 million. Interest payments increased by 8,7% and labour costs and rent payment by 5,1% each.

The cash flow of farmers increased by 15,8%, from R68 106 million in the previous year to R78 835 million for the period July 2014 to June 2015.

Conclusion

The gross income of farmers increased by 9,5%, mainly as a result of higher production levels of animal products and some horticultural products. The increase in prices, especially of maize, tobacco, horticultural products and animal products also contributed to higher income.

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on the major fresh produce markets and to make comparisons between markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products, the reaction of producers to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products, and *per capita* income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Johannesburg Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the 5-year period 2010 to 2014.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Interesting herb: Mint

Scientific name: *Mentha spicata L.*

Common names: Mint, Minthe

History: Mint is an ancient herb used since ancient times for its culinary, medicinal and aromatic properties.

Mint has played an important role in the American tradition. While the Native Americans were using mint even before the arrival of the European settlers, the early colonists brought this prized herb with them from the Old World because they had long honoured it for its therapeutic properties, as well as for the delicious hot tea beverage made from its leaves.

Mint's characteristic smell has made it one of the most popular perfuming herbs throughout history. Worldwide, from Europe to India to the Middle East, mint has been used as a strewing herb to clear the air in both temples and homes. Mint has also come to symbolise hospitality in many cultures. In ancient Greece, mint leaves were rubbed on dining tables to welcome guests.

Description: Mint is the glorious plant that gives the candy of the same name its cool burst of flavour. While there are about 25 different species of mint, peppermint is actually a natural hybrid cross between *Mentha aquatica* (water mint) and *Mentha spicata* (spearmint). Peppermint has greenish-purple lance-shaped leaves, while the rounder leaves of spearmint are more of a greyish-green colour.

The taste of both peppermint and spearmint bears a flavour that can be described as a cross between pepper and chlorophyll, with peppermint being a bit stronger and spearmint being a little more cool and subtle. In addition to peppermint and spearmint, other plants in the *Mentha* genus include apple mint, orange mint, water mint, curly mint and Corsican mint.

Mints are aromatic, almost exclusively perennial, rarely annual, herbs. They have wide-spreading underground and over-ground stolons and erect, square, branched stems. The leaves are arranged in opposite pairs, from oblong to lanceolate, often downy, and with a serrated margin. Leaf colours range from dark green and grey-green to purple, blue, and sometimes pale yellow. The flowers are white to purple and produced in false whorls called verticillasters. The corolla is two-lipped with four sub-equal lobes, the upper lobe usually the largest. The fruit is a nutlet, containing one to four seeds.

While the species that make up the *Mentha* genus are widely distributed and can be found in many environments, most grow best in wet environments and moist soils. Mints will grow 10 to 120 cm tall and can spread over an indeterminate area. Owing to their tendency to spread unchecked, some mints are considered invasive.

Types: The most common types of mint that are grown for culinary and medicinal purposes are spearmint, peppermint, chocolate mint, pineapple mint, apple mint, orange mint and Swiss mint. However, there are hundreds of varieties. Mint types cross-pollinate and can form new varieties when grown close together, so there are many types that are undocumented.

Not all mints are ground covers. Common mountain mint grows up to 90 cm tall and grows wild in the central and southeastern United States. Lemon mint or purple horse mint grows up to 120 cm tall and is a native mint that grows wild throughout the United States. It has a sharp citrus-like taste and smell.

Culture: Mints are extremely hardy perennials. They prefer a full-sun location but will tolerate light shade. Mint is propagated by either stem or root cuttings. Because mints have a prolific growth habit, they will become invasive in the garden. Place them in the garden where they cannot interfere with other plants or try and contain their spreading root system.

It is highly suggested that mints be grown in containers above ground. Other suggestions for containing mints include planting mints in large bottomless containers that are sunk into the garden. This technique does not always prove successful and mints can move away from the container and become invasive. To keep plants vigorous, it is suggested that they be divided every 3 to 4 years. In order to maintain the flavour of the leaves, flower spikes should be removed as they appear.

Culinary uses: The leaf, fresh or dried, is the culinary source of mint. Fresh mint is usually preferred over dried mint when storage of the mint is not a problem. The leaves have a warm, fresh, aromatic, sweet flavour with a cool aftertaste, and are used in teas, beverages, jellies, syrups, candies, and ice creams. In Middle Eastern cuisine, mint is used on lamb dishes, while in British cuisine and American cuisine, mint sauce and mint jelly are used respectively.

Health benefits:

- Relieves indigestion: The menthol present in *pudina* helps the enzymes necessary for digestion. They relax the smooth muscles of the stomach, reducing the chances of indigestion and spasms. They can also act on these muscles to activate them and help work more efficiently to carry out digestion.

- Fights aches and pains: A number of pain balms use mint extracts as the main ingredient in their products. That is because when mint extract is used on an area that is hurting, it immediately provides a cooling effect, causing the area to partially become numb. This helps in lessening the pain. Another method is to inhale the fumes of mint extract. This soothes the nerves and gives a calming feeling to the entire body. It indirectly soothes aches and pains as well as nausea associated with a headache.
    - Gives you glowing and acne-free skin: Mint has a unique property that soothes and calms itchy and infected skin. It has potent anti-inflammatory and antibacterial properties which work wonders on acne prone skin, and is often used in a number of cleansers, toners and in some lip balms as well. The strong antioxidants present in mint leaves, leave the skin with a natural glow and rehydrate dull and dry skin. Mint has a high salicylic acid content, which helps prevent pimples, blemishes and even helps to get rid of blackheads.
    - Helps fight oral infections: Mint leaves are packed with antibacterial and anti-inflammatory properties. That is why they are so great to for your oral health. It kills bacteria in the mouth, preventing tooth decay, beats bad breath and keeps your tongue and teeth clean naturally. Just chew on a few mint leaves regularly to keep dental diseases at bay.
- Helps relieve cough and cold: Mint has a very strong smell that opens up nasal passages and airways to allow relaxed breathing. It is also an expectorant and helps the expulsion of phlegm, when you are suffering from productive cough. Its antibacterial and anti-inflammatory properties help relieve inflammation along the respiratory tract. If you are suffering from cough, add a drop of mint extract to warm water and inhale its fumes through the mouth and push out the steam through your nose. This way mint extract passes through your throat and nose, relieving both the areas.
- Prevents allergies and asthma: Mint contains rosmarinic acid that acts as a powerful antioxidant. This compound blocks allergy-producing leukotrienes and therefore may be helpful for those suffering from allergic rhinitis (hay fever).
