ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Areas planted and seventh production forecast for summer crops for the 2016 production season

According to the seventh production forecast for summer crops by the Crop Estimates Committee (CEC) for the 2016 production season, the expected South African **maize** crop was 7,262 million tons, which was 27,1% less than the 9,955 million tons of the 2015 season and 37,9% or 4,437 million tons less than the five-year average of 11,699 million tons up to 2015.

The estimated area that South African commercial producers planted to maize during the 2016 season was 1,947 million ha. This was 26,6% or 706 100 ha less than the 2,653 million ha planted in the previous season. Of this area, 700 000 ha (36,0%) were in the Free State, 490 000 ha (25,2%) in Mpumalanga and 440 000 ha (22,6%) in North West.

The plantings of maize in the Free State decreased by an estimated 42,6%, from 1,220 million ha in 2015 to 700 000 ha in 2016 and in Mpumalanga it increased by 4,5%, from 469 000 ha to 490 000 ha. Plantings in the North West came to an estimated 440 000 ha—a decrease of 32,3% from the 650 000 ha planted in 2015.

The ratio of white to yellow maize plantings for 2016 is 52:48, as against 55:45 the previous season. The estimated white maize plantings were 1,015 million ha, which were 29,9% less than the previous season's 1,448 million ha, while the yellow maize plantings were estimated to be 932 000 ha—22,6% less than the 1,205 million ha for 2015.

Most of the country's maize crop was produced in the Mpumalanga (29,9%), Free State (28,4%) and North West (13,7%) provinces.

The production forecast for white maize was 3,097 million tons, which was 34,6% or 1,638 million tons less than the 4,735 million tons of 2015 and 3,104 million tons less than the average of the five years up to 2015. The expected yield for white maize was 3,05 t/ha, as against 3,27 t/ha the previous season.

In the case of yellow maize, the production forecast was 4,165 million tons, which was 20,2% or 1,055 million tons less than the 5,220 million tons of the previous season and 1,333 million tons less than the five-year average up to 2015. The yield for yellow maize was expected to be 4,47 t/ha, as against 4,33 t/ha in 2015.

The expected **sunflower seed** crop was 742 750 tons, which was 12,0% more than the 663 000 tons of the previous season and 8,1% more than the average of 686 800 tons for the five years up to 2015. The area planted to sunflower seed was estimated at 718 500 ha, which was 24,7% more than the 576 000 ha planted in 2015. The expected yield was 1,03 t/ha, as against 1,15 t/ha the previous season.

The production forecast for **soya beans** was 750 250 tons, which was 29,9% less than the 1,070 million tons of the previous season. The estimated area planted was 502 800 ha, which was 26,8% or 184 500 ha less than the 687 300 ha planted in 2015. The expected yield was 1,49 t/ha, as against 1,56 t/ha in 2015.

The expected **groundnut** crop was 29 285 tons, which was 53,0% or 33 015 tons less than the 62 300 tons of the 2015 season and 31 025 tons less than the five-year average of 60 310 tons per annum up to 2015. The area planted to groundnuts was an estimated 22 600 ha, which was 61,0% or 35 400 ha less than the 58 000 ha planted the previous season. The expected yield was 1,30 t/ha, as against 1,07 t/ha in 2015.

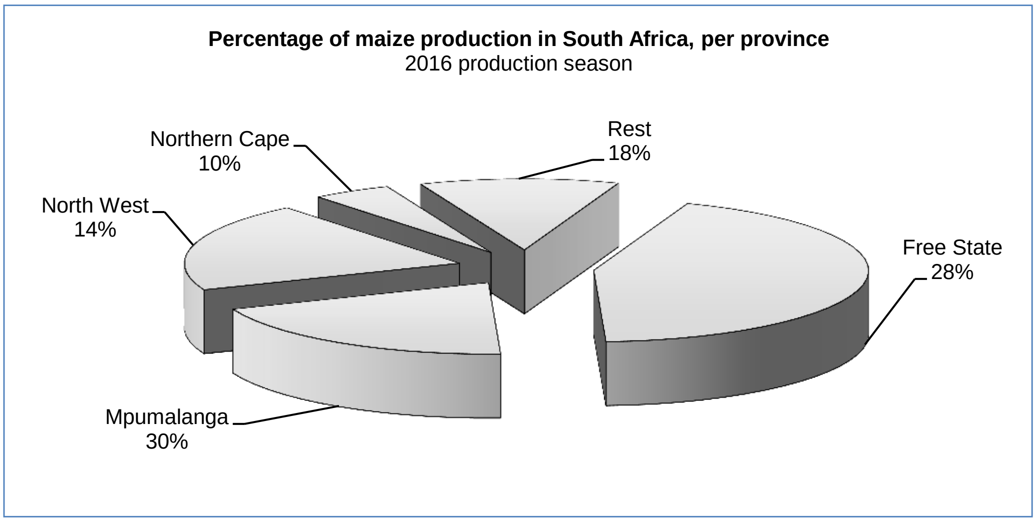
The production forecast for **sorghum** was 88 500 tons—26,6% less than the 120 500 tons of the previous season. The area planted to sorghum was estimated to be 48 500 ha, which was 31,2% or 22 000 ha less than the 70 500 ha planted in 2015. The expected yield was 1, 82 t/ha, as against 1,71 t/ha the previous season.

The production of **dry beans** was expected to be 35 745 tons, which was 51,3% or 37 645 tons less than the 73 390 tons of the previous season and 25 334 tons less than the five-year average of 61 079 tons per annum up to 2015. The estimated area planted was 34 400 ha, which was 46,3% less than the 64 000 ha planted the previous season. The expected yield was 1,04 t/ha, as against 1,15 t/ha for 2015.

Area estimate and seventh production forecast of summer field crops: 2016 production season*

Crop	Area planted 2016	Seventh forecast 2016	Area planted 2015	Final crop 2015	Change – tons 2016 *vs* 2015
	ha	tons	ha	tons	%
White maize	1 014 750	3 097 225	1 448 050	4 735 000	-34,6
Yellow maize	932 000	4 164 700	1 204 800	5 220 000	-20,2
Total maize	1 946 750	7 261 925	2 652 850	9 955 000	-27,1
Sunflower seed	718 500	742 750	576 000	663 000	+12,0
Soya beans	502 800	750 250	687 300	1 070 000	-29,9
Groundnuts	22 600	29 285	58 000	62 300	-53,0
Sorghum	48 500	88 500	70 500	120 500	-26,6
Dry beans	34 400	35 745	64 000	73 390	-51,3

* Forecasts and estimates exclude the non-commercial sector.



Preliminary estimate of the area planted to winter cereal crops for the 2016 production season

The CEC also released the preliminary area estimate for winter crops on 27 July 2016.

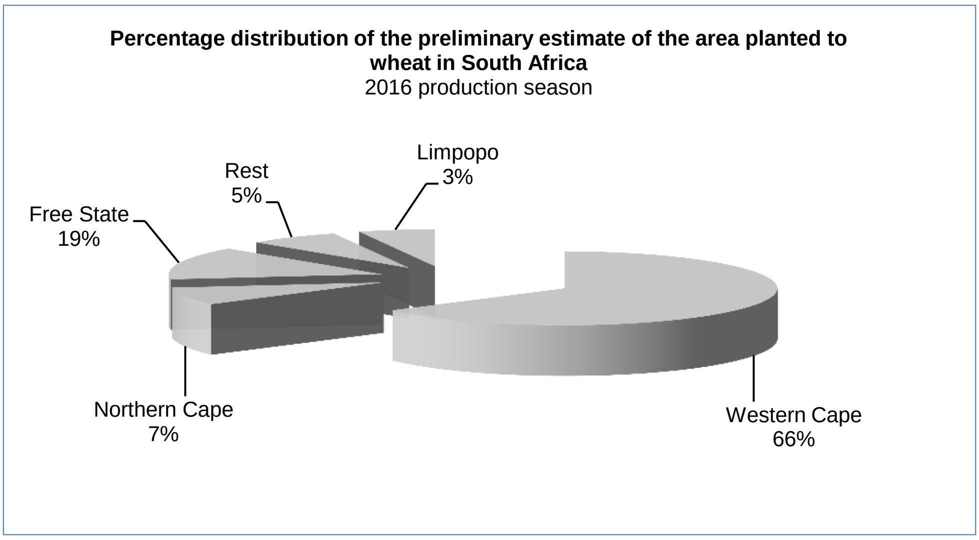
The estimate for **wheat** was 486 350 ha, which is 0,9% more than the 482 150 ha planted in 2015. On record, this is the third smallest area planted to wheat since the early 1930s. The main wheat-producing area was in the Western Cape, with 320 000 ha (65,8%), followed by the Free State with 90 000 ha (18,5%) and the Northern Cape with 35 500 ha (7,3%).

The preliminary area estimate for **malting barley** was 88 400 ha, which was 5,7% less than the 93 730 ha of the 2015 season.

The area planted to **canola** was estimated at 70 500 ha, a decrease of 9,7% from the previous season's plantings of 78 050 ha.

Preliminary area estimate of winter cereals for the 2016 production season

Crop	Area planted 2016	Area planted 2015	Final crop 2015	Change – ha 2016 *vs* 2015
	ha	ha	tons	%
Wheat	486 350	482 150	1 440 000	+0,9
Malting barley	88 400	93 730	332 000	-5,7
Canola	70 500	78 050	93 000	-9,7



2. ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	July ’14 to June ’15	July ’15 to June ’16	% change
Total gross farming income (R million)	226 162	237 317	+4,9
Expenditure on intermediate goods and services (R million)	120 227	128 458	+6,8
Total farming cost (R million)	151 619	162 053	+6,9
Net farming income (R million)	78 443	79 819	+1,8
Domestic terms of trade (2010 = 1)	1,02	1,11	+8,8

Gross income from major products at current prices

Field crops (R million)	July ’14 to June ’15	July ’15 to June ’16	% change
Maize	28 512	24 346	-14,6
Wheat	5 363	5 318	-0,8
Sugar cane	6 886	6 437	-6,5
Sunflower seed	3 245	3 640	+12,2
Tobacco	504	474	-6,0
All field crops	55 253	50 318	-8,9
Horticulture (R million)			
Vegetables (including potatoes)	18 067	22 480	+24,4
Deciduous and other fruit	15 813	19 107	+20,8
Citrus fruit	13 180	14 817	+12,4
Viticulture	4 772	4 576	-4,1
Subtropical fruit	3 725	3 500	-6,0
All horticultural products	61 067	70 340	+15,2
Animal products (R million)			
Poultry meat	37 225	38 596	+3,7
Cattle and calves slaughtered	26 792	30 389	+13,4
Milk	14 994	14 002	-6,6
Eggs	9 439	10 158	+7,6
Sheep slaughtered	6 160	6 126	-0,5
All animal products	109 842	116 658	+6,2

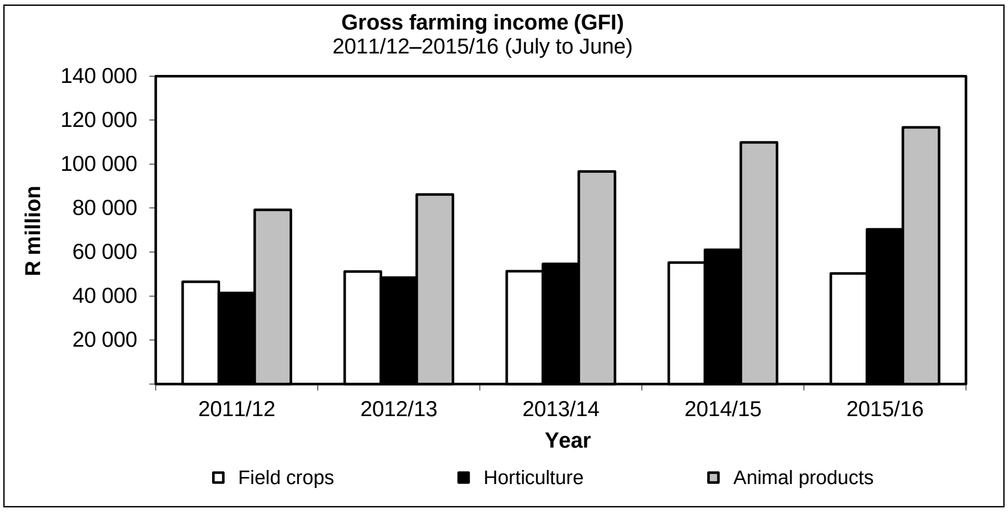
3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 01 July 2015 to 30 June 2016. Aggregates are compared with the period 01 July 2014 to 30 June 2015.

Gross farming income

Gross farming income refers to that part of agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross income from all agricultural products increased by 4,9% and amounted to R237 317 million for the year ended 30 June 2015, from R226 162 million the previous year. This was mainly a result of the increase in gross income derived from horticultural products by 15,2% and animal products by 6,2%. The income derived from field crops decreased by 8,9%.



The gross income from field crops decreased by 8,9% and amounted to R50 318 million from R55 253 million. The decrease in income from field crops was the result of the decrease in groundnuts by 64\%, dry beans by 35,1%, cotton by 27,2%, grain sorghum by 20,1%, maize by 14,6%, sugar cane by 6,5%, tobacco by 6,0% and wheat by 0,8%. The income from sunflower increased by 12,2%.

The gross income from horticultural products increased by 15,2% as a result of the increases in income from vegetables by 24,4%, deciduous and other fruit by 20,8% and citrus fruit by 12,4%. However, the gross income derived from subtropical fruit and viticulture decreased by 6,0% and 4,1%, respectively.

The gross income from animal products increased by 6,2% due to the increase in gross income derived from cattle and calves slaughtered by 13,4%, eggs by 7,6% and poultry meat by 3,7%. The gross income derived from milk and sheep slaughtered decrease by 6,6% and 0,5%, respectively.

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services showed an increase of 6,8%, from R120 227 million to R128 458 million for the year ended on 30 June 2016. Expenditure on building and fencing material increased by 10,3%, seed and plants by 10,0%, packing material by 9,2%, farm feeds by 8,0%; farm services and animal health and crop protection by 6,0% each, fuel by 5,5%, maintenance and repairs on machinery and implements by 5,1% and fertilisers by 3,0%.

Farm feeds was the largest expenditure item, accounting for 29,0%, followed by maintenance and repairs on machinery and implements by 13,8%, farm services by 12,4%, fuel by 8,9%, animal health and crop protection and seed and plants by 6,3% each fertilisers by 5,2%, packing material by 4,7% and building and fencing material by 3,9%.

Prices received and paid by farmers

On average, prices received by farmers for their products increased by 14,3% for the year ended 30 June 2016, compared to 4,4% the previous period.

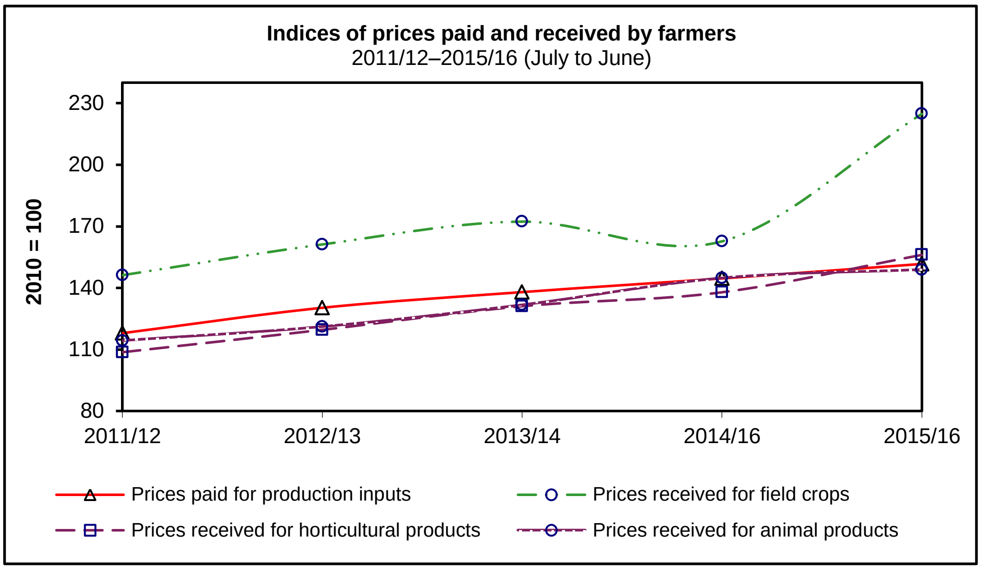
The prices of field crops increased by 38,2% and was mainly influenced by increases in the prices of summer grains by 61,1%, oilseeds by 24,6%, winter grains by 22,2%, cotton by 14,1%, sugar cane by 8,8%, tobacco by 4,9%, hay by 3,4% and dry beans by 2,3%.

The prices of horticultural products increased by 13,2%. The prices of vegetables, fruit and viticulture increased by 25,1%, 8,1% and 2,3% respectively. .

The prices of animal products increased by 2,8%. The average price of pastoral products increased by 29,1%, slaughtered stock by 6,2% and poultry meat by 1,1%, while the price of milk decreased by 5,0%.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements as well as intermediate goods and services remained unchanged at 4,8%. The prices of tractors increased on average by 11,6%, building material by 7,2%, animal and health protection by 5,5% trucks by 5,4%; feeds by 5,3%, maintenance and repairs by 5,1%, seeds by 5,0%, packaging material by 4,3%, fencing material by 3,6% and fuel by 1,9%.

The domestic terms of trade increased by 8,8%, from 1,02 to 1,11.



Farming income and cash flow

The gross farming income increased by 4,9% and the expenditure on intermediate production inputs by 6,8%, which resulted in the increase of 1,8% in net farming income. Interest payments, rent payment and labour costs increased by 9,5%, 5,6% and 5,5%, respectively.

The farmers' cash flow increased by 1,6% to R82 354 million for the period July 2015 to June 2016, from R81 091 million in the previous corresponding period.

Conclusion

Although the gross income derived from field crops decreased (due to a decrease in production levels), the increase in gross income from horticultural and animal products contributed to the increase in gross farming income. The increase in income was a result of increased production levels and prices of both horticultural and animal products. The prices of field crops also increased.

Compiled by Ephaphrus Mankwane

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on the major fresh produce markets and to make comparisons between markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Durban Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2011 to 2015.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Interesting vegetable: Kohlrabi

Scientific name: *Brassica oleracea* Gongylodes Group

Common names: German turnip or turnip cabbage

History: As a vegetable known to the Roman Empire, kohlrabi was likely grown in many parts of the Roman Empire. By the year 800 AD, the Holy Roman Emperor Charlemagne ordered for kohlrabi to be grown in Imperial gardens. Although Charlemagne is thought to be French, he was actually from western Germany. The name "kohlrabi" is actually a German name that means "cabbage turnip."

By the 1600s, Kohlrabi had spread to India via trade. By this time, it had become a staple crop in India. It has more recently been cultivated in China and other parts of East Asia, the Middle East and Africa. By the late 20th century, it was grown in many parts of the world and recipes developed for both cooking the root and the leaves.

Although kohlrabi is available in the United States, it is not common outside the southern US. It was first recorded as a crop in the United States in 1806. It is often grown as an exotic vegetable in home gardens and can sometimes be found in some supermarkets. As a member of the cabbage family, kohlrabi can be eaten raw or cooked, depending on the requirements of the recipe.

Description: Kohlrabi is a member of the Brassica family, botanically classified as *Brassica oleracea* subspecies Gongylodes. The common name, 'Kohlrabi' is derived from the Germanic 'kohl' for "cabbage" and ''rabi' for turnip. It was named for its edible enlarged stem that grows above ground like other members of the cruciferous family. Kohlrabi is technically a stem, not a root.

Kohlrabi may be white, green or purple in color. Leaves of young plants may be used like spinach, or mustard greens.

Kohlrabi is a plant related to cabbage, kale and broccoli. It is a cold-hardy, fast growing plant. The plant's greens grow directly from the bulbous stem. The flesh is white, regardless of the colour of its outer layer and leaf ribs. Bulbs are generally harvested at 2 to 7,6 cm in diameter. Smaller bulbs are tender and have a milder, sweeter taste, while the larger bulbs can become more fibrous and woody. Larger Kohlrabi is often stuffed like squash. Kohlrabi's flavour is likened to broccoli stems, sweet and mild with a hint of cabbage or radish. The texture is firm and crisp and the flesh is juicy. Kohlrabi can be eaten both raw and cooked.

There are several varieties commonly available, including White Vienna, Purple Vienna, Grand Duke, Gigante (also known as "Superschmelz"), Purple Danube and White Danube. Colouration of the purple types is superficial: the edible parts are all pale yellow. The leafy greens can also be eaten. One commonly used variety grows without a swollen stem: it only has leaves and a very thin stem and is called Haakh. Popular Kashmiri dishes are Haakh and Monj, which are made by using this vegetable.

Climate: Fresh kohlrabi can be found all year round in Texas, although it is most commonly available during autumn and early winter. Commercial production is concentrated in the south Texas area but small plantings can be found state-wide. Locally available kohlrabi can be found during March through May and again in the months of October through December.

Food uses: Small kohlrabi bulbs, which are young and tender, generally do not require peeling. Medium to larger sizes should be peeled to remove the protective outer skin. The crisp flesh can be served raw in salads, as a relish, or as a crunchy accompaniment to dips. The bulb can be sliced, cut into quarters, cubes, or julienne strips and steamed until crisp or tender. Kohlrabi bulbs can be hollowed out and stuffed with a vegetable or meat filling.

Nutritional value: Kohlrabi is high in vitamin C and a good source of both fibre and potassium. This nutrient-dense bulb also contains high amounts of phosphorus, magnesium, calcium and iron.

Kohlrabi is highly valued in countries and cuisines around the world, not only for its diversity in cooking applications, but also because it is full of nutrients and minerals like copper, potassium, manganese, iron and calcium; as well as vitamins such as vitamin C, B-complex vitamins, vitamin A and vitamin K. Along with that, kohlrabi is also high in dietary fibre and antioxidant compounds, such as phytochemicals and various carotenes.

Health benefits: Digestive health: Just like most of the cruciferous vegetables, kohlrabi is a great source of dietary fibre that can seriously improve your digestive health. Fibre helps to move your bowels along, eliminating constipation, reducing cramping and bloating and generally improving the quality of your gastrointestinal system, while also maximising your nutrient uptake efficiency.

Weight loss booster: Kohlrabi is the perfect diet vegetable because it is low in calories, high in fibre and is packed with beneficial nutrition. Fibre makes us feel full, so even if the volume of food consumed isn't that great, we resist the urge to snack between meals or overeat.

Nerve and muscle function: Although this characteristic of potassium isn't discussed too often, it is one of the key players in muscle and nerve behaviour in the body. It helps us move, breathe, react and function every single day. As such, the high potassium content in kohlrabi makes it a great addition to your diet to keep alert, energetic and in great shape.

Blood pressure: That same potassium content also functions as a vasodilator, reducing the strain on the cardiovascular system by easing the tension of blood vessels and arteries. This can increase circulation throughout the body, oxygenating key areas and lowering the risk of cardiovascular events like strokes or heart attacks. Potassium is also a key part of fluid regulation in the body, as it works with sodium to regulate fluid movement between cells.
