ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Areas planted and sixth production forecast for summer crops for the 2018 production season

According to the sixth production forecast for summer crops by the Crop Estimates Committee (CEC) for the 2018 production season, the expected South African maize crop was 13,207 million tons, which was 21,5% less than the 16,820 million tons of the 2017 season and 8,9% or 1,084 million tons more than the five-year average of 12,123 million tons up to 2017.

The estimated area that South African commercial producers planted to maize during the 2018 season was 2,319 million ha. This was 11,8% or 309 750 ha less than the 2,629 million ha planted in the previous season. Of this area, 1,054 million ha (45,5%) were in the Free State and 480 000 ha (20,7%) in the North West and Mpumalanga provinces, respectively.

The plantings of maize in the Free State decreased by an estimated 9,1%, from 1,160 million ha in 2017 to 1,054 million ha in 2018 and in the North West it decreased by 23,8%, from 630 000 ha to 480 000 ha. Plantings in Mpumalanga decreased by an estimated 2,0%, from 490 000 ha in 2017 to 480 000 ha in 2018.

The ratio of white to yellow maize plantings for 2018 is 55:45, as against 63:37 the previous season. The estimated white maize plantings were 1,268 million ha, which were 22,8% less than the previous season's 1,643 million ha, while the yellow maize plantings were estimated to be 1,051 million ha—6,6% more than the 985 500 ha for 2017.

Most of the country's maize crop was produced in the Free State (42,8%), Mpumalanga (22,4%) and the North West (16,6%) provinces.

The production forecast for white maize was 6,880 million tons, which was 30,6% or 3,036 million tons less than the 9,916 million tons of 2017 and 604 700 tons more than the average of the five years up to 2017. The expected yield for white maize was 5,43 t/ha, as against 6,03 t/ha the previous season.

In the case of yellow maize, the production forecast was 6,327 million tons, which was 8,4% or 576 650 tons less than the 6,904 million tons of the previous season and 479 790 tons more than the five-year average up to 2017. The yield for yellow maize was expected to be 6,02 t/ha, as against 7,01 t/ha in 2017.

The expected sunflower seed crop was 792 255 tons, which was 9,4% less than the 874 000 tons of the previous season and 7,6% more than the average of 736 200 tons for the five years up to 2017. The area planted to sunflower seed was estimated at 601 500 ha, which was 5,4% less than the 635 750 ha planted in 2017. The expected yield was 1,32 t/ha, as against 1,37 t/ha the previous season.

The production forecast for soya beans was 1,551 million tons, which was 17,8% more than the 1,316 million tons of the previous season. The estimated area planted was 787 200 ha, which was 37,2% or 213 250 ha more than the 573 950 ha planted in 2017. The expected yield was 1,97 t/ha, as against 2,29 t/ha in 2017.

The expected groundnut crop was 52 000 tons, which was 43,5% or 40 050 tons less than the 92 050 tons of the 2017 season and 5 606 tons less than the five-year average of 57 606 tons per annum up to 2017. The area planted to groundnuts was an estimated 56 300 ha, which was 0,5% or 300 ha more than the 56 000 ha planted the previous season. The expected yield was 0,92 t/ha, as against 1,64 t/ha in 2017.

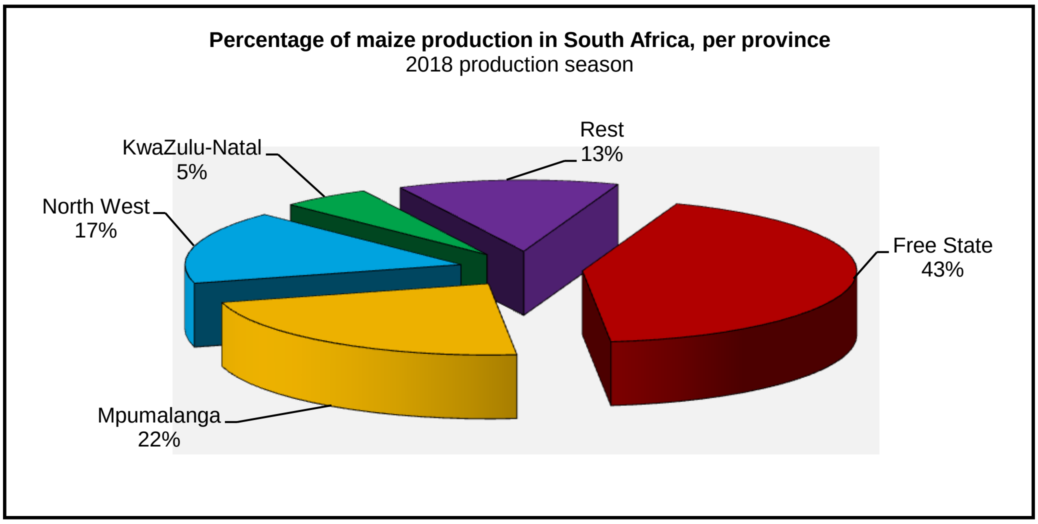
The production forecast for sorghum was 83 070 tons—45,3% less than the 152 000 tons of the previous season. The area planted to sorghum was estimated to be 28 800 ha, which was 32,0% or 13 550 ha less than the 42 350 ha planted in 2017. The expected yield was 2,88 t/ha, as against 3,59 t/ha the previous season.

The production of dry beans was expected to be 65 610 tons, which was 4,3% or 2 915 tons less than the 68 525 tons of the previous season and 1 672 tons more than the five-year average of 63 938 tons per annum up to 2017. The estimated area planted was 53 360 ha, which was 18,4% more than the 45 050 ha planted the previous season. The expected yield was 1,23 t/ha, as against 1,52 t/ha for 2017.

Area estimate and sixth production forecast of summer field crops: 2018 production season*

Crop	Area planted 2018	Sixth forecast 2018	Area planted 2017	Final crop 2017	Change – tons 2018 *vs* 2017
	ha	tons	ha	tons	%
White maize	1 268 100	6 879 960	1 643 100	9 916 000	-30,6
Yellow maize	1 050 750	6 327 350	985 500	6 904 000	-8,4
Total maize	2 318 850	13 207 310	2 628 600	16 820 000	-21,5
Sunflower seed	601 500	792 255	635 750	874 000	-9,4
Soya beans	787 200	1 550 800	573 950	1 316 000	+17,8
Groundnuts	56 300	52 000	56 000	92 050	-43,5
Sorghum	28 800	83 070	42 350	152 000	-45,3
Dry beans	53 360	65 610	45 050	68 525	-4,3

* Forecasts and estimates exclude the non-commercial sector.



Preliminary estimate of the area planted to winter cereal crops for the 2018 production season

The CEC also released the preliminary area estimate for winter crops on 26 July 2018.

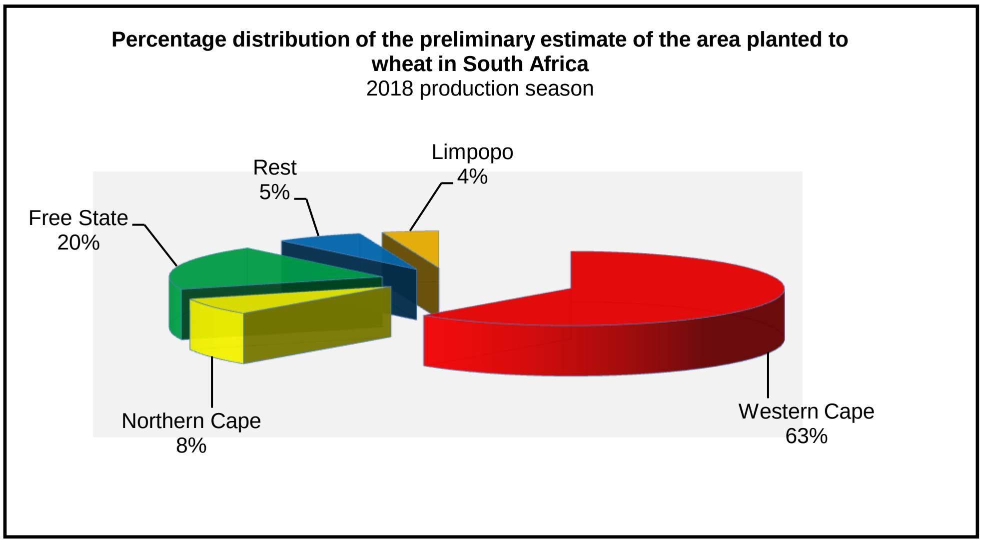
The estimate for wheat was 505 000 ha, which is 2,7% more than the 491 600 ha planted in 2017. The main wheat-producing area was in the Western Cape, with 318 000 ha (63,0%), followed by the Free State with 100 000 ha (19,8%) and the Northern Cape with 38 000 ha (7,5%).

The preliminary area estimate for malting barley was 106 150 ha, which was 16,2% more than the 91 380 ha of the 2017 season.

The area planted to canola was estimated at 80 000 ha, a decrease of 4,8% from the previous season's plantings of 84 000 ha.

Preliminary area estimate of winter cereals for the 2018 production season

Crop	Area planted 2018	Area planted 2017	Final crop 2017	Change – ha 2018 *vs* 2017
	ha	ha	tons	%
Wheat	505 000	491 600	1 535 000	+2,7
Malting barley	106 150	91 380	307 000	+16,2
Canola	80 000	84 000	93 500	-4,8



2. ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	July '16 to June '17	July '17 to June '18	% change
Total gross farming income (R million)	267 920	273 544	+2,1
Expenditure on intermediate goods and services (R million)	137 216	145 999	+6,4
Total farming cost (R million)	177 090	183 969	+6,2
Net farming income (R million)	96 207	96 579	+0,4
Domestic terms of trade (2010 = 1)	1,11	1,07	-3,6

Gross income from major products at current prices

Field crops (R million)	July '16 to June '17	July '17 to June '18	% change
Maize	30 919	21 518	-30,4
Wheat	7 114	5 677	-20,2
Sugar cane	8 094	7 890	-2,5
Sunflower seed	4 847	3 175	-34,5
Tobacco	601	638	+6,1
All field crops	65 148	52 572	-19,3
Horticulture (R million)			
Vegetables (including potatoes)	22 186	22 605	+1,9
Deciduous and other fruit	19 390	18 233	-6,0
Citrus fruit	18 061	19 461	+7,8
Viticulture	5 572	5 231	-6,1
Subtropical fruit	4 039	4 278	+5,9
All horticultural products	76 613	78 008	+1,8
Animal products (R million)			
Poultry meat	40 472	46 382	+14,6
Cattle and calves slaughtered	33 161	37 913	+14,3
Milk	16 463	17 815	+8,2
Eggs	10 272	11 846	+15,3
Sheep slaughtered	6 846	7 227	+5,6
All animal products	126 167	142 964	+13,3

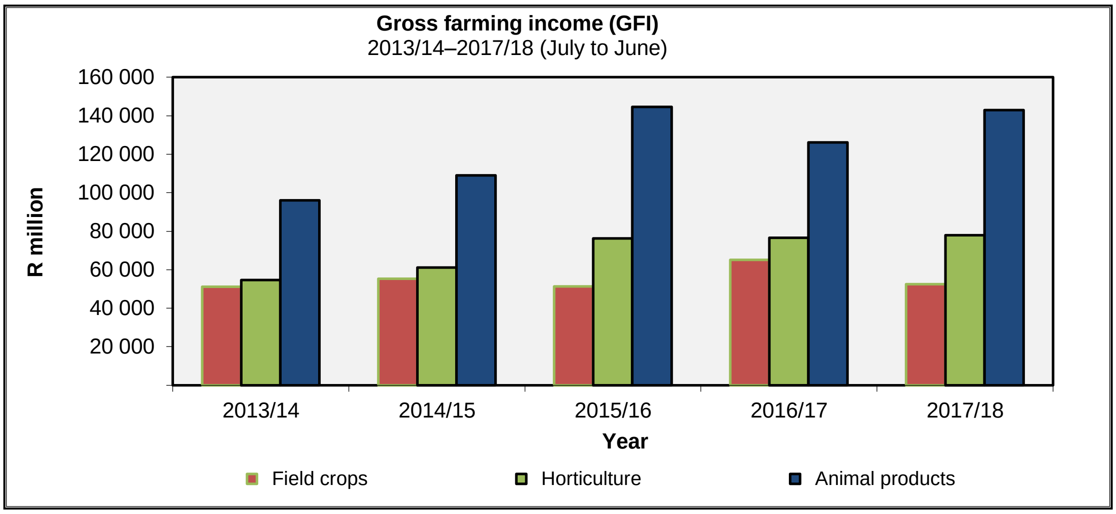
3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 01 July 2017 to 30 June 2018. Aggregates are compared with the period 01 July 2016 to 30 June 2017.

Gross farming income

Gross farming income refers to that part of agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross income made from all agricultural products increased by 2,1% and was estimated at R273 544 million for the year ended 30 June 2018. This was mainly driven by the increase in gross income derived from animal and horticultural products by 13,3% and 1,8%, respectively.



The income made from field crops decreased substantially by 19,3%, and was influenced by the decrease in income from groundnuts by 35,3%, sunflower seed by 34,5%, maize by 30,4%, grain sorghum by 28,6%, wheat by 20,2%, sugar cane by 2,5% and hay slightly by 0,5%. The income from cotton increased by 137,1%, dry beans by 11,3%, soya beans by 7,7% and tobacco by 6,1%.

A decrease of 1,8% in gross income from horticultural products was largely the result of the increase in income from citrus fruit by 7,8%, subtropical fruit by 5,9% and vegetables by 1,9%. The income from viticulture and deciduous and other fruit decreased by 6,1% and 6,0%, respectively.

The gross income from animal products increased by 13,3% to R142 964 million, from R126 159 million the previous period. This was largely influenced by the increase in income from eggs by 15,3%, poultry meat (14,6%), cattle and calves slaughtered (14,3%) and milk (8,2%).

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased by 6,4%, as the result of the increase in expenditure on seeds and plants by 10,0%, packing material and building and fencing material by 9,0% each, animal health and crop protection, and farm services (6,0%), farm feeds (5,8%), maintenance and repairs (5,0%), fuel (3,2%) and fertilisers (3,0%).

Farm feeds had the largest share as an expenditure item, accounting for 29,1%, maintenance and repairs on machinery and implements (13,4%), farm services (12,2%), fuel (8,6%), seed and plants (6,7%), animal health and crop protection (6,2%), packing material (4,9%), fertilisers (4,8%) and building and fencing material (4,1%).

Prices received and paid by farmers

The prices received by farmers for their products decreased slightly on average by 0,3%, compared to an increase of 4,2% the previous period.

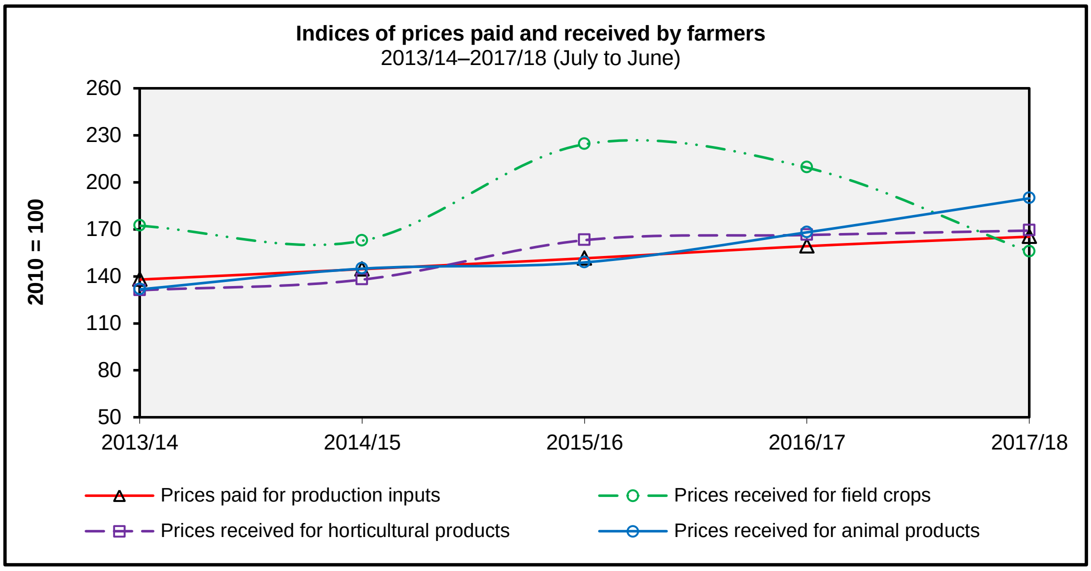
The prices of field crops decreased drastically by 25,7%, largely as the result of the decreases in the prices of summer grains by 39,7%, oilseeds (16,8%), sugar cane (9,0%), dry beans (8,6%), hay (6,1%) and winter grains (3,2%). The prices of cotton and tobacco increased by 6,9% and 0,7%%, respectively.

The prices of horticultural products increased by 1,8%, due to the increase in the prices of viticulture by 10,9%, vegetables by 1,6% and fruit slightly by 0,4%.

The prices of animal products increased by 12,9%, due to the substantial increase in the prices of pastoral products by 23,5%, poultry meat by 14,7%, slaughtered stock by 12,8% and milk by 3,7%.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements as well as intermediate goods and services increased by 3,8%, compared to 5,1% the previous period. This was driven by the increase in prices of animal health and crop protection by 9,8%, seeds (6,2%), packing material (5,8%), trucks (5,6%), maintenance and repairs of machinery and implements by 4,3%, fencing material (4,1%), building material (4,0%), fuel (3,3%), fertilisers (3,2%), tractors (2,6%) and feeds (1,5%).

The domestic terms of trade decreased by 3,6%, as the result of the increase of 3,8% in production costs and a decrease of 0,3% in prices received by the farmers for their products.



Farming income and cash flow

The increase of 2,1% in gross farming income and 6,4% in the expenditure on intermediate production inputs led to net farming income to increase slightly by only 0,4%. Interest payments increased by 8,6%, labour costs by 6,0% and rent payment by 4,5%.

The farmers' cash flow decreased by 5,0%, to R97 169 million, mainly due to the increase in intermediate expenditure, which was caused by the increase in production costs.

Conclusion

The increase in gross farming income was largely influenced by the increase in income made from animal and horticultural products. The increase in income from animal and horticultural products was as the result of the increase in prices and production levels of some products, especially milk, citrus fruit and vegetables.

A substantial decrease of 25,7% in prices and production levels of field crops had an effect on the gross farming income, which has only increased by 2,1%, compared to an increase of 16,0% in the previous period.

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Cape Town Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2013 to 2017.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Ms Mahlatse Makaleng

Interesting Fruit: Tamarillo

Scientific name: *Solanum betaceum*

Common names: Tamarillo, Tree Tomato, Arbol de Tomate

History: The tamarillo is native to the Andes of Ecuador, Colombia, Peru, Chile, and Bolivia. Today it is still cultivated in gardens and small orchards for local production, and it is one of the most popular fruits in these regions. Other regions of cultivation are the subtropical areas throughout the world, such as Rwanda, South Africa, Darjeeling and Sikkim in India, Nepal, Hong Kong, China, the United States, Australia, Bhutan and New Zealand.

The first internationally marketed crop of tamarillos in Australia was produced around 1996, although permaculture and exotic fruit enthusiasts had increasingly grown the fruit around the country from the mid-1970s on.

In New Zealand, about 2,000 tons are produced on 200 hectares of land and exported to the United States, Japan and Europe. For the export, the existing marketing channels developed for the kiwifruit are used.

Description: The tamarillo is a small, attractive, half-woody, evergreen or deciduous, shrub or small tree. It is also brittle and shallow-rooted, growing to a height of 3 to 5 m.

A red, egg-shaped tropical fruit is about the size of a plum. It is sometimes called a tree tomato. The fruits are about 4-10 centimetres long. Their colour varies from yellow, orange to red, and almost purple. Sometimes they have dark, longitudinal stripes.

Red fruits are more acetous, yellow and orange fruits are sweeter. The flesh has a firm texture and contains more and larger seeds than a common tomato. The fruits are very high in vitamins and iron and low in calories (only about 40 calories per fruit)

Cultivation The plant cannot tolerate prolonged drought and must have ample water during dry periods. A mulch is very beneficial in conserving moisture at such times. Tamarillos require a fertile, light soil that is rich in organic matter. Perfect drainage is also necessary. Water standing for even a few days may kill the plant. Because of the shallow root system, deep cultivation is not possible, but light cultivation to eliminate weeds is acceptable.

Tamarillos are ready to harvest when they develop the yellow or red colour characteristic of the particular variety

Health Benefits: Tamarillo is packed with vitamins A, C, E and pro-vitamin A. It has a good source of B-complex vitamins such as nia–cin, thiamine, and riboflavin. Other nutrients in tamarillo are carbohydrates, protein, fat, calcium, potassium and sodium. It also contains minerals such as, phosphorus, manganese, magnesium, copper, zinc and iron. It is fortified with many nutrients that help improve the immune system.

Helps Control Diabetes: The chlorogenic acid present in the tamarillo helps lower blood sugar levels in type-II diabetes mellitus. Tamarillo contains excellent antioxidants, which can reduce oxidative stress in organs such as the pancreas and the liver. Eating the pulp of tamarillo, or consuming its juice on a light stomach would ensure better results.

Cancer: Anthocyanins contained in the darker tamarillo have potent antioxidants, which help combat free radicals that cause cancer. They also have anti-microbial and anti-inflammatory properties that stave off cancerous outbreaks.

Eye side: Tamarillo fruits are also very good for maintaining healthy eyesight. Vitamin A restores the moisture of the membranes of the eyes, which act as a barrier to bacteria and viruses. It protects the eyes from infections, and reduces the damage of eye disorders such as cataract and macular degeneration

Food Uses: It is usually eaten cooked and can be quite tart when raw, though a sprinkling of sugar can help. Avoid eating the skin, which is bitter, but use the flesh in ice creams or sorbets and serve cooked tamarillo with poultry or fish. You can also use tamarillo in the same way as tomatoes to make sauces or chutney.
