ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Areas planted and sixth production forecast for summer crops for the 2019 production season

According to the sixth production forecast for summer crops by the Crop Estimates Committee (CEC) for the 2019 production season, the expected South African maize crop was 10,979 million tons, which was 12,2% less than the 12,510 million tons of the 2018 season and 10,5% or 1,284 million tons less than the five-year average of 12,263 million tons up to 2018.

The estimated area that South African commercial producers planted to maize during the 2019 season was 2,301 million ha. This was 0,8% or 18 350 ha less than the 2,319 million ha planted in the previous season. Of this area, 1,030 million ha (44,8%) were in the Free State and 485 000 ha (21,1%) in the North West and 483 000 ha (21,0%) in Mpumalanga province.

The plantings of maize in the Free State decreased by an estimated 2,3%, from 1,054 million ha in 2018 to 1,030 million ha in 2019 and in the North West, it increased by 1,0%, from 480 000 ha to 485 000 ha. Plantings in Mpumalanga increased by an estimated 0,6%, from 480 000 ha in 2018 to 483 000 ha in 2019.

The ratio of white to yellow maize plantings for 2019 is 56:44, as against 55:45 the previous season. The estimated white maize plantings were 1,298 million ha, which were 2,4% more than the previous season's 1,268 million ha, while the yellow maize plantings were estimated to be 1,002 million ha—4,6% less than the 1,051 million ha for 2018.

Most of the country's maize crop was produced in the Free State (40,0%), Mpumalanga (24,5%) and the North West (15,2%) provinces.

The production forecast for white maize was 5,572 million tons, which was 14,8% or 967 760 tons less than the 6,540 million tons of 2018 and 889 660 tons less than the average of the five years up to 2018. The expected yield for white maize was 4,29 t/ha, as against 5,16 t/ha the previous season.

In the case of yellow maize, the production forecast was 5,407 million tons, which was 9,4% or 563 380 tons less than the 5,970 million tons of the previous season and 394 180 tons less than the five-year average up to 2018. The yield for yellow maize was expected to be 5,40 t/ha, as against 5,68 t/ha in 2018.

The expected sunflower seed crop was 655 640 tons, which was 23,9% less than the 862 000 tons of the previous season and 17,8% less than the average of 797 200 tons for the five years up to 2018. The area planted to sunflower seed was estimated at 515 350 ha, which was 14,3% less than the 601 500 ha planted in 2018. The expected yield was 1,27 t/ha, as against 1,43 t/ha the previous season.

The production forecast for soya beans was 1,170 million tons, which was 24,0% less than the 1,540 million tons of the previous season. The estimated area planted was 730 500 ha, which was 7,2% or 56 700 ha less than the 787 200 ha planted in 2018. The expected yield was 1,60 t/ha, as against 1,96 t/ha in 2018.

The expected groundnut crop was 18 880 tons, which was 66,9% or 38 120 tons less than the 57 000 tons of the 2018 season and 41 826 tons less than the five-year average of 60 706 tons per annum up to 2018. The area planted to groundnuts was an estimated 20 050 ha, which was 64,4% or 36 250 ha less than the 56 300 ha planted the previous season. The expected yield was 0,94 t/ha, as against 1,01 t/ha in 2018.

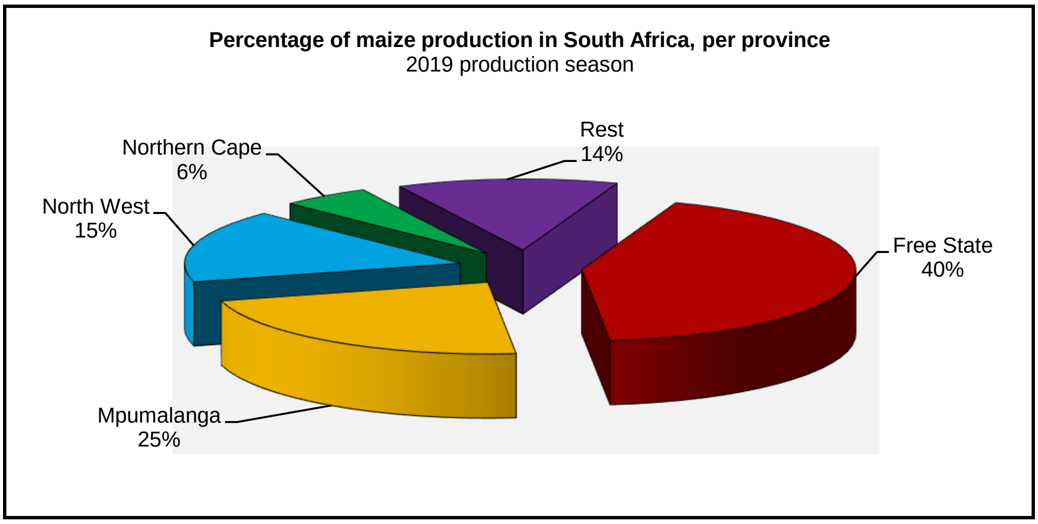
The production forecast for sorghum was 153 950 tons—33,9% more than the 115 000 tons of the previous season. The area planted to sorghum was estimated to be 50 500 ha, which was 75,3% or 21 700 ha more than the 28 800 ha planted in 2018. The expected yield was 3,05 t/ha, as against 3,99 t/ha the previous season.

The production of dry beans was expected to be 66 355 tons, which was 4,3% or 3 005 tons less than the 69 360 tons of the previous season and 585 tons more than the five-year average of 65 770 tons per annum up to 2018. The estimated area planted was 59 300 ha, which was 11,1% more than the 53 360 ha planted the previous season. The expected yield was 1,12 t/ha, as against 1,30 t/ha for 2018.

Area estimate and sixth production forecast of summer field crops: 2019 production season*

Crop	Area planted 2019	Sixth forecast 2019	Area planted 2018	Final crop 2018	Change – tons 2019 vs 2018
	ha	tons	ha	tons	%
White maize	1 298 400	5 572 240	1 268 100	6 540 000	-14,8
Yellow maize	1 002 100	5 406 620	1 050 750	5 970 000	-9,4
Total maize	2 300 500	10 978 860	2 318 850	12 510 000	-12,2
Sunflower seed	515 350	655 640	601 500	862 000	-23,9
Soya beans	730 500	1 170 345	787 200	1 540 000	-24,0
Groundnuts	20 050	18 880	56 300	57 000	-66,9
Sorghum	50 500	153 950	28 800	115 000	+33,9
Dry beans	59 300	66 355	53 360	69 360	-4,3

* Forecasts and estimates exclude the non-commercial sector.



Preliminary estimate of the area planted to winter cereal crops for the 2019 production season

The CEC also released the preliminary area estimate for winter crops on 25 July 2019.

The estimate for wheat was 536 950 ha, which is 6,7% more than the 503 350 ha planted in 2018. The main wheat-producing area was in the Western Cape, with 324 000 ha (60,3%), followed by the Free State with 125 000 ha (23,3%) and the Northern Cape with 36 000 ha (6,7%).

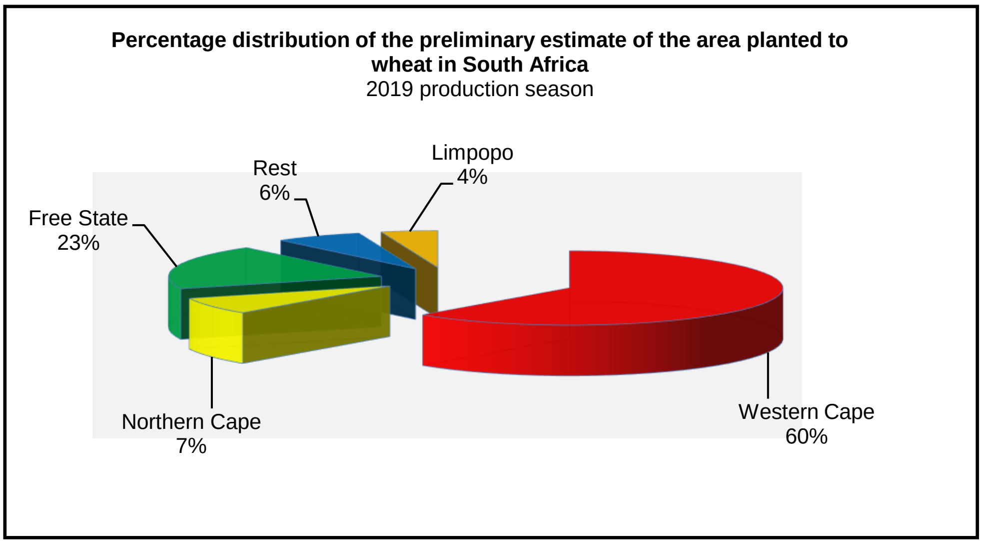
The preliminary area estimate for malting barley was 120 500 ha, which was 1,3% more than the 119 000 ha of the 2018 season.

The area planted to canola was estimated at 74 000 ha, a decrease of 3,9% from the previous season's plantings of 77 000 ha.

The preliminary area estimate for oats for the 2019 season was 22 000 ha, which was 14,4% more than the 19 235 ha of the previous season.

Preliminary area estimates of winter cereals for the 2019 production season

Crop	Area planted 2019	Area planted 2018	Final crop 2018	Change – ha 2019 vs 2018
	ha	ha	tons	%
Wheat	536 950	503 350	1 868 000	+6,7
Malting barley	120 500	119 000	421 500	+1,3
Canola	74 000	77 000	104 500	-3,9
Oats	22 000	19 235	32 700	+14,4



2. ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	July ’17 to June ’18	July ’18 to June ’19	% change
Total gross farming income (R million)	278 915	277 801	-0,4
Expenditure on intermediate goods and services (R million)	145 999	154 773	+6,0
Total farming cost (R million)	183 968	194 205	+5,6
Net farming income (R million)	101 952	89 415	-12,3
Domestic terms of trade (2010 = 1)	1,07	1,02	-4,7

Gross income from major products at current prices

Field crops (R million)	July ’17 to June ’18	July ’18 to June ’19	% change
Maize	20 895	25 575	+22,4
Wheat	5 681	6 999	+23,2
Sugar cane	7 890	8 564	+8,5
Sunflower seed	3 172	3 436	+8,3
Tobacco	638	540	-15,3
All field crops	52 168	57 835	+10,9
Horticulture (R million)			
Vegetables (including potatoes)	23 050	24 502	+6,3
Deciduous and other fruit	22 648	18 252	-19,4
Citrus fruit	19 111	20 404	+6,8
Viticulture	6 147	6 215	+1,1
Subtropical fruit	4 461	5 030	+12,8
All horticultural products	83 825	83 535	-0,3
Animal products (R million)			
Poultry meat	46 501	46 563	+0,1
Cattle and calves slaughtered	37 318	34 631	-7,2
Milk	18 010	15 989	-11,2
Eggs	12 076	11 125	-7,9
Sheep slaughtered	7 262	6 290	-13,4
All animal products	142 922	136 431	-4,5

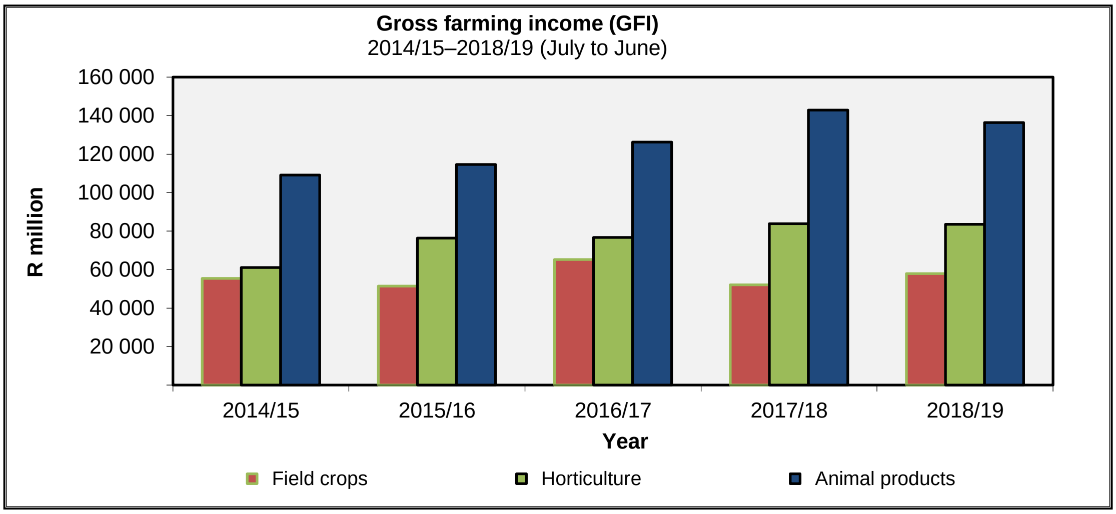
3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 01 July 2018 to 30 June 2019. Aggregates are compared with the period 01 July 2017 to 30 June 2018.

Gross farming income

Gross farming income refers to that part of agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross farming income made from all agricultural products decreased slightly by 0,4% to R277 801 million for the year ended 30 June 2019, from R278 915 million in the previous period. This was largely because of the decrease in gross income from animal and horticultural products by 4,5% and 0,3%, respectively.



The increase of 10,9% in gross income from field crops was driven by the increase in income from grain sorghum by 29,0%, cotton by 28,1%, wheat by 23,2%, maize by 22,4%, sugar cane by 8,5% and sunflower seed by 8,3%.

The income earned from horticultural products decreased marginally by 0,3% mainly because of the decrease in income made from deciduous and other fruit by 19,4%.

The income made from animal products decreased by 4,5% as the result of the decrease in income from sheep slaughtered by 13,4%, milk by 11,2%, eggs by 7,9% and cattle and calves slaughtered by 7,2%.

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased by 6,0% as the result of the increase in expenditure on seeds and plants and building and fencing material by 10,0% each, packing material (9,0%), maintenance and repairs of machinery and implements (8,1%), farm services and animal health and crop protection (6,0%) each, fuel (4,4%), farm feed (3,9%) and fertilisers (3,0%).

Farm feed had the largest share as an expenditure item, accounting for 28,5%, maintenance and repairs of machinery and implements (13,7%), farm services (12,2%), fuel (8,5%), seed and plants (7,0%), animal health and crop protection (6,2%), packing material (5,0%), fertilisers (4,7%) and building and fencing material (4,3%).

Prices received and paid by farmers

The weighted average price received by farmers for their agricultural products decreased slightly by 0,5% mainly because of the decrease in prices of animal products by 6,0%.

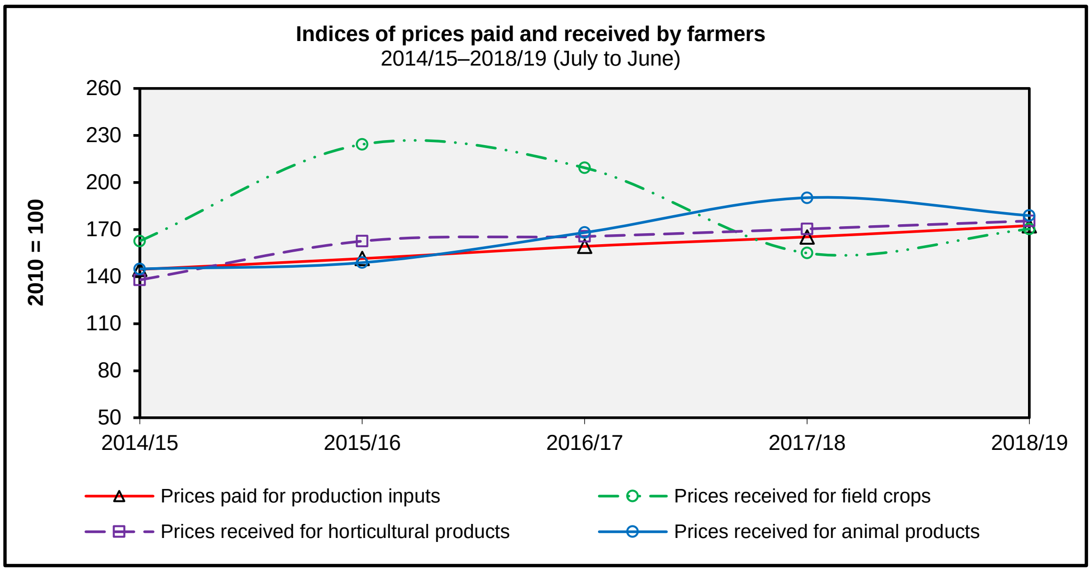
The weighted average price of field crops increased by 9,9%, due to the increase in the prices of summer grains by 19,7%, winter grains (7,8%), hay (5,3%), oilseeds (3,7%) and tobacco slightly by 0,6%.

The weighted average price of horticultural products increased by 3,0%, due to the increase in the prices of viticulture by 16,6% and vegetables by 8,6%.

The weighted average price of animal products decreased by 6,0% and was driven by the decrease in prices of milk by 11,4%, poultry meat by 6,4% and slaughtered stock by 5,4%.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements as well as intermediate goods and services increased by 4,3%, compared to 3,9% the previous period. The prices of building material increased by 6,3%, fuel (6,0%), fencing material (5,8%), packaging material and animal health and crop protection (4,8%) each, trucks and maintenance and repairs of machinery and implements (4,6%) each, seed (4,0%), feeds (3,3%) and tractors and fertilisers (2,3%) each.

The domestic terms of trade showed a decrease of 4,7%, largely because of the increase of 4,3% in production costs compared to a decrease of 0,5% in prices received by the farmers.



Farming income and cash flow

The Net farming income decreased by 12,3% mainly as the result of the increase of 4,3% in the expenditure on intermediate goods and services. Interest payments increased by 10,3% while labour costs and rent payment increased by 4,4% each.

The farmers' cash flow decreased by 11,5% to R90 749 million, due to the increase in prices of production inputs.

Conclusion

The gross farming income decreased marginally by 0,4% as the result of the decrease in income earned from animal and horticultural products. The decrease in income from animal products was largely driven by the decrease in prices whereas that from horticultural products was the result of the decrease in production levels, particularly of deciduous and other fruit (12,6%), viticulture (6,0%) and vegetables (0,8%).

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Springs Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2014 to 2018.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Ms Mahlatse Makaleng

Interesting vegetable: Yam

Common names: Yam

Scientific names: *Dioscorea alata*

History: Yams originated in Africa, Asia and the Caribbean. Africans call yams "nyami," which is where we get the word "yam." They are cylindrical and vary in size. Some of the largest yams have weighed more than 100 pounds and have been several feet long.

Yams have a dense white, purple, or red flesh and scaly brown skin with dark spots. A yam is starchy and dry. In African culture, it is typically boiled or roasted. They have a shelf life of six months.

Description: A monocot related to lilies and grasses, yams are vigorous herbaceous vines providing an edible tuber. They are native to Africa, Asia and the Americas. Some yams are also invasive plants, often considered a "noxious weed" outside cultivated areas. Yam tubers vary in size, from that of a small potato to some over 60 kg. Some 870 species of yams are known and 95% of these crops are grown in Africa.

Yam tubers can grow up to 15 m in length and 7,6 to 15,2 cm in height. The tuber may grow into the soil up to 1,5 m deep. The plant disperses by seed.

The edible tuber has a rough skin difficult to peel, but softens after heating. The skins vary in colour from dark brown to light pink. The majority of the vegetable is composed of a much softer substance known as the "meat." This substance ranges in colour from white or yellow to purple or pink in mature yams.

Cultivation: Yam crop begins when whole seed tubers or tuber portions are planted into mounds or ridges at the beginning of the rainy season. The crop yield depends on how and where the sets are planted, sizes of mounds, interplant spacing, provision of stakes for the resultant plants, yam species and tuber sizes desired at harvest. Small-scale farmers in West and Central Africa often intercrop yams with cereals and vegetables. The seed yams are perishable and bulky to transport. Farmers who do not buy new seed yams usually set aside up to 30% of their harvest for planting the next year. Yam crops face pressure from a range of insect pests and fungal and viral diseases, as well as nematodes. Their growth and dormant phases correspond respectively to the wet season and the dry season. For maximum yield, the yams require a humid tropical environment, with an annual rainfall of over 1 500 mm distributed uniformly throughout the growing season. White, yellow and water yams typically produce a single large tuber per year, generally weighing 5 to 10 kg.

Health benefits: Yam is a good source of energy; 100 g provides 118 calories. Its crunchy edible root is chiefly composed of complex carbohydrates and soluble dietary fibre.

Dietary fibre helps to reduce constipation and decreases bad cholesterol levels (LDL) by binding to it in the intestines and lower colon cancer risk by preventing toxic compounds in food from adhering to the colon mucosa. Additionally, by being a good source of complex carbohydrates, it regulates a steady rise in blood sugar levels. For the same reason, yam is recommended as a low glycaemic index healthy food.

The tuber is an excellent source of the B-complex group of vitamins. It provides adequate daily requirements of pyridoxine (vitamin B6), thiamine (vitamin B1), riboflavin, folates, pantothenic acid and niacin. These vitamins mediate various metabolic functions in the body.

Fresh roots also contain good amounts of antioxidants and vitamins such as vitamin C; providing about 29% of recommended levels per 100 g. Vitamin C plays some important roles in anti-aging, as an immune function booster, in wound healing and in bone growth.

Yam contains small amounts of vitamin A and β-carotene levels. Carotenes convert into vitamin A inside the body. Both these compounds are powerful antioxidants. Vitamin A has many functions like maintaining healthy mucosa and skin, night vision, growth and protection from lung and oral cavity cancers.

Culinary Uses: Small yams can be cooked in their skins, but larger ones should be peeled, washed and blanched for 10 – 20 minutes in boiling salted water before being used.

Yams can be used in the same way as potatoes. Serve mashed yams with plenty of butter and seasoning as an accompaniment to meat stews or other vegetable dishes. Make yam chips or bake yams in their skins. In Africa, yam is pounded into a very stiff paste called fufu, eaten by hand in pinches from the serving tray, rolled into balls and dipped into a stew.
