SECTION A

ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Intended plantings of summer grain crops for the 2017 production season

Figures on the intended plantings of summer crops for the 2017 production season were released by the Crop Estimates Committee (CEC) on 26 October 2016. Based on inputs received from a sample of producers, the area expected to be planted to maize on commercial farms was 2,463 million ha, of which 1,455 million ha (59%) were earmarked for white maize and 1,008 million ha (41%) for yellow maize. The commercial producers therefore intended to increase the area planted to white maize by 440 250 ha (43,4%) and yellow maize plantings by 76 000 ha (8,2%) from the previous season.

Producers indicated that more maize will be planted for the 2017 season, mainly because of favourable weather forecasts for the new season, which will hopefully bring relief after the previous seasons' drought conditions. However, the rainfall can still influence farmers' decisions.

In the case of sunflower seed, intended plantings were estimated at 670 000 ha, which is 6,8% or 48 500 ha less than the 718 500 ha planted the previous season.

The intended plantings of soya beans showed an increase of 2,6% from the area planted the previous season, from 502 800 ha to 516 000 ha.

The intended plantings of groundnuts were 48,2% higher than the area planted the previous season, from 22 600 ha to 33 500 ha.

The plantings of sorghum were expected to decrease by 21,0%, from 48 500 ha to 38 300 ha.

The intended plantings of dry beans showed a decrease of 4,1% from the area planted the previous season, from 34 400 ha to 33 000 ha.

Summary of intended plantings of summer grain crops: 2017 production season

Crop	Intended plantings 2017	Area planted 2016	Change 2017 vs 2016
	ha	ha	%
White maize	1 455 000	1 014 750	+43,4
Yellow maize	1 008 000	932 000	+8,2
Total maize	2 463 000	1 946 750	+26,5
Sunflower seed	670 000	718 500	-6,8
Soya beans	516 000	502 800	+2,6
Groundnuts	33 500	22 600	+48,2
Sorghum	38 300	48 500	-21,0
Dry beans	33 000	34 400	-4,1
Total	3 753 800	3 273 550	+14,7

Estimates are based on conditions by the middle of October 2016

Approximately 86% of the total area planted to summer grain crops in South Africa during the past three years was located in the Free State (44%), North West (23%) and Mpumalanga (19%) provinces.

Third production forecast for winter crops for the 2016 production season

According to the third production forecast for 2016 released by the CEC on 26 October 2016, the expected wheat crop was 1,734 million tons, which is 20,4% or 293 980 tons more than the crop of 1,440 million tons of the previous season. The expected yield was 3,41 t/ha, as against 2,99 t/ha the previous season.

The main wheat producing areas for 2016 are within the Western Cape with 323 000 ha (63,5%), followed by the Free State with 110 000 ha (21,6%). The expected yield for the Western Cape was 2,90 t/ha, as against 2,25 t/ha the previous season and for the Free State 2,80 t/ha, as against 2,21 t/ha.

For the 2016 production season, weather conditions across South Africa's wheat growing areas have been fairly favourable., The Western Cape in particular, which is the major wheat growing area in the RSA, received rainfall which is favourable for the wheat crop.

The production forecast for malting barley was 299 895 tons. The area planted was estimated at 88 695 ha, while the expected yield was 3,38 t/ha.

The expected canola crop was 108 860 tons, while the area estimate was 68 075 ha, with an expected yield of 1,60 t/ha.

Area and production estimates for winter cereals: 2016 vs the 2015 production season

Crop	Area planted 2016	Third forecast 2016	Area planted 2015	Final crop 2015	Change – tons 2016 vs 2015
	(A)	(B)	(C)	(D)	(B)÷(D)
	ha	tons	ha	tons	%
Wheat	508 365	1 733 980	482 150	1 440 000	+20,4
Malting barley	88 695	299 895	93 730	332 000	-9,7
Canola	68 075	108 860	78 050	93 000	+17,1
Total	665 135	2 142 735	653 930	1 865 000	+14,9

2. ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	Oct. ’14 to Sep. ’15	Oct. ’15 to Sep. ’16	% change
Total gross farming income (R million)	225 509	247 194	+9,6
Expenditure on intermediate goods and services (R million)	122 337	130 749	+6,9
Total farming cost (R million)	154 294	164 968	+6,9
Net farming income (R million)	74 805	87 519	+17,0
Domestic terms of trade (2010 = 1)	1,03	1,14	+10,7

Gross income from major products at current prices

Field crops (R million)	Oct. ’14 to Sep. ’15	Oct. ’15 to Sep. ’16	% change
Maize	24 210	27 642	+14,2
Wheat	5 366	5 456	+1,7
Sugar cane	6 589	7 180	+9,0
Sunflower seed	3 149	4 784	+51,9
Tobacco	492	500	+1,6
All field crops	50 692	55 680	+9,8
Horticulture (R million)			
Vegetables (including potatoes)	17 639	23 496	+33,2
Deciduous and other fruit	16 221	19 418	+19,7
Citrus fruit	14 755	15 179	+2,9
Viticulture	4 786	4 586	-4,2
Subtropical fruit	3 667	3 889	+6,1
All horticultural products	62 913	72 804	+15,7
Animal products (R million)			
Poultry meat	38 313	38 528	+0,6
Cattle and calves slaughtered	27 380	31 510	+15,1
Milk	14 870	14 640	-1,5
Eggs	9 606	10 189	+6,1
Sheep slaughtered	6 147	6 297	+2,4
All animal products	111 903	118 710	+6,1

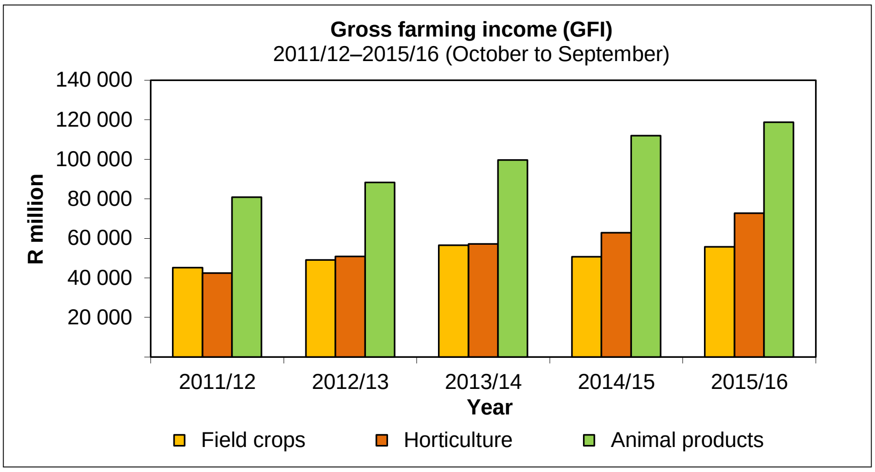
3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 1 October 2015 to 30 September 2016. Aggregates are compared with the period 1 October 2014 to 30 September 2015.

Gross farming income

Gross farming income refers to that part of agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross income from all agricultural products increased by 9,6% and amounted to R247 194 million for the year ended 30 September 2016. This was a result of the increase in the gross income from horticultural products by 15,7%, field crops by 9,8% and animal products by 6,1%.



The income from field crops increased by 9,8%, from R50 692 million to R55 680 million, mainly because of the increase in income derived from sunflower seed by 51,9%, hay by 18,8%, maize by 14,2%, sugar cane by 9,0%, wheat by 1,7% and tobacco by 1,6%. However, the income from groundnuts decreased by 71,5%, dry beans by 39,6%, cotton by 39,2%, grain sorghum by 13,7%, canola by 12,6% and soya beans by 11,4%.

The income from horticultural products increased by 15,7%, from R62 913 million to R72 804 million. This was mainly influenced by the increase in income from vegetables by 33,2%, deciduous and other fruit by 19,7%, subtropical fruit by 6,1% and citrus fruit by 2,9%. The income from viticulture decreased by 4,2%.

The income from animal production showed an increase of 6,1%, from R111 903 million to R118 710 million. Cattle and calves slaughtered contributed to the increase by 15,1%, eggs by 6,1%, sheep slaughtered by 2,4% and poultry meat slightly by 0,6%. The income derived from milk dropped by 1,5%.

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased to R130 749 million for the period ended September 2016, from R122 337 million the previous period, which is an increase of 6,9%. The increase in expenditure was a result of the increase in prices of tractors by 13,0%, building material by 8,5%, feeds by 6,5%, trucks by 6,4%, animal health and crop protection by 6,3%, fuel by 5,8%, seeds by 5,4%, packing material by 5,0%, fencing material by 4,9%, maintenance and repairs of machinery and implements by 4,5% and fertilisers by 2,7%.

The expenditure on seed and plants increased by 10,0%, building and fencing material by 9,6%, packing material by 9,2%, farm feeds by 8,0%, farm services and animal health and crop protection by 6,0% each, fuel by 5,8%, maintenance and repairs on machinery and implements by 5,1% and fertilisers by 3,0%.

Proportionally, farm feeds remained the largest expenditure item and contributed 29,0% to the total expenditure, maintenance and repairs of machinery and implements (13,8%), farm services (12,3%), fuel (8,9%), seed and plants (6,4%), animal health and crop protection (6,3%), fertilisers (5,1%), packing material (4,7%) and building and fencing material (4,0%).

Prices received and paid by farmers

Prices received by farmers for their products increased on average by 16,8%, compared to 4,5% in the previous year.

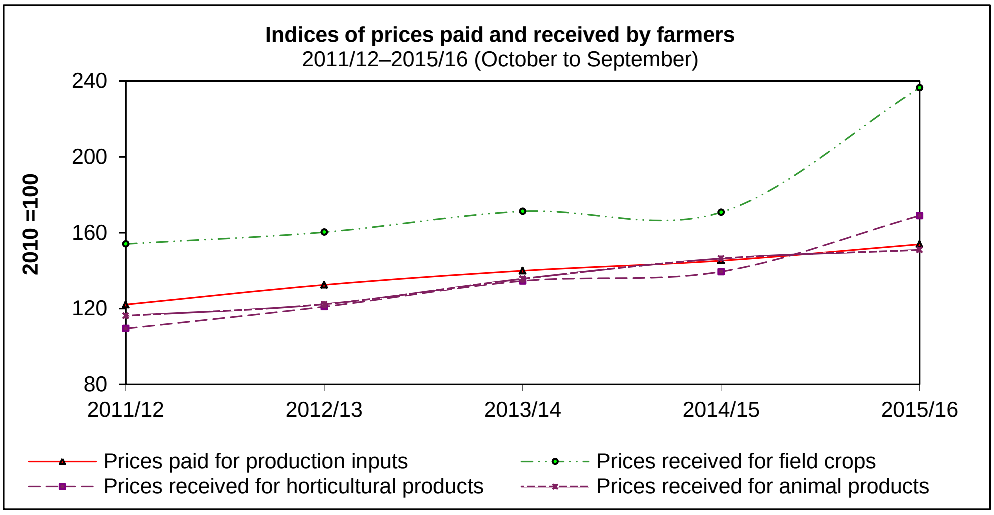
The weighted average price of field crops increased significantly by 38,4%. The increase in price can be attributed to the huge increases in the prices of summer grains by 57,9%, cotton by 29,1%, oilseeds by 24,5%, winter grains by 22,7%, sugar cane by 13,0%, tobacco by 11,4%, dry beans by 11,1% and hay by 7,5%.

The weighted average price of horticultural products increased by 21,3%, as the result of the increases in the prices of vegetables by 38,7%, fruit by 15,1% and viticulture by 3,7%.

The weighted average price of animal products increased by 3,1% and was mainly the result of the increases in the prices of pastoral products by 27,9% and slaughtered stock by 7,5%. However, the prices of poultry meat dropped slightly by 0,7%.

The prices paid for farming requisites, including machinery and implements, intermediate goods and services and material for fixed improvements, increased by 5,9% for the period October 2015 to September 2016, compared to 3,8% the previous year.

The domestic terms of trade increased by 10,7%.



Farming income and cash flow

The increase of 9,6% in gross farming income and 6,9% in expenditure on intermediate production inputs resulted in the increase of 17,0% in net farming income, from R74 805 million in the previous period to R87 519 million. Interest payments rose by 9,8%, while labour remuneration and rent payments increased by 5,8% each.

The cash flow of farmers increased by 14,8%, from R77 958 million in the previous period to R89 463 million.

Summary

The increase in gross farming income can be attributed mainly to the increase in income from horticultural products (15,7%), field crops (9,8%) and animal products (6,1%). The increase in income (from horticultural products, field crops and animal products) was mainly due to the increase in prices, despite the decline in production levels of field crops (17,2%) and horticultural products (4,8%). However, animal production increased slightly by 1,6%.

The increase of 16,8% in prices received by farmers for their products and the increase of 5,9% in prices paid for production inputs resulted in the increase of 10,7% in domestic terms of trade.

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on the major fresh produce markets and to make comparisons between markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Tshwane Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2011 to 2015.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Interesting fruit: Tomato

Scientific name: *Solanum lycopersicum*

Common names: Globe Tomato, Cherry Tomato, Heirloom Tomato, Roma Tomato, Pear Tomato

History: The English word tomato comes from the Spanish word, tomate, which is derived from the Nahuatl (Aztec language) word, tomatl. It first appeared in print in 1595. As a member of the deadly nightshade family, tomatoes were erroneously thought to be poisonous (although the leaves are poisonous) by Europeans who were suspicious of their bright, shiny fruit. Native versions were small, like cherry tomatoes and most likely yellow rather than red.

The tomato is native to Southwestern and Central America. In 1519, Cortez discovered tomatoes growing in Montezuma's gardens and brought seeds back to Europe where they were planted as ornamental curiosities, but not eaten. Most likely the first variety to reach Europe was yellow in color, since in Spain and Italy they were known as pomi d'oro, meaning yellow apples. Italy was the first to embrace and cultivate the tomato outside South America.

Description: Tomato, *Lycopersicum esculentum* (syn. *Solanum lycopersicum* and *Lycopersicon lycopersicum*) is a herbaceous annual in the family Solanaceae grown for its edible fruit. The plant can be erect with short stems or vine-like with long, spreading stems. The stems are covered in coarse hairs and the leaves are arranged spirally. The tomato plant produces yellow flowers, which can develop into a cyme of 3-12 and usually round fruit (berry) which is fleshy, smoothed skinned and can be red, pink, purple, brown, orange or yellow in color. The tomato plant can grow 0.7-2 m (2.3–6.6 ft.) in height and as an annual, is harvested after only one growing season. Tomato may also be referred to as love apple and originates from South America.

Climate: Tomato is a warm season crop and grows in areas that are free from frost. It can't be grown successfully in places of higher rainfall. Optimum temperature for seed germination is 26 to 32 °C. The optimum temperature required for its cultivation is 15 to 27 °C. At higher temperatures, its blossoms drop off. If fruit are exposed to direct sunlight, their tops may turn whitish yellow and become leathery in texture. This is common in late varieties during summer season. This condition is known as sun-scald.

Cultivation: The best part about growing tomatoes is that the plants can grow in practically any type of soil. However, what the plants really need is a warm temperature. In fact, most tomato plants will not grow until the temperature reaches 10 °C. If you are wondering when to plant tomatoes, you first need to decide whether you want to use seeds or seedlings.

If you are using seeds, plant them in small pots around six to eight weeks before the anticipated last frost date in your region. Make sure the pots are moist. Once the seeds germinate, transfer the pots to an area that has ample light. However, before the seedlings form roots, you should transplant them into bigger pots. Also, this is the time to start keeping the pots out for short durations to allow the seedlings to acclimatize themselves. If you are using seedlings to grow tomatoes, make sure you buy healthy ones with green leaves. Also, only buy those seedlings that will grow well in your region.

Uses: Tomatoes can be enjoyed and used in many different ways. You can eat them whole; make a fresh or cooked salsa; use them for sauces, like purees or tomato sauces; make soups or you can even make tomato juices. Tomatoes can also be frozen, canned and sun dried. They can be used as a facial beauty product and applied for the relief of sunburn.

Health benefits: Lycopene is an antioxidant which supposedly fights the free radicals that can interfere with normal cell growth and activity. These free radicals can potentially lead to cancer, heart disease and premature aging.

Tomatoes are also high in vitamin C (concentrated the most in the juice sacs surrounding the seeds) and contain large amounts of potassium, iron, phosphorus, vitamin A and vitamin B. As a source of fibre, one medium tomato will equal one slice of whole wheat bread with a penalty of only 35 calories. Although green tomatoes are wonderful when cooked or pickled, they should be avoided in large amounts when raw. Green tomatoes contain large amounts of tomatine, a toxin in the same alkaloid family as solanine, which may be found in green potatoes, another member of the nightshade family. Unfortunately, the tomato is included in the list of the top ten foods which most people are allergic to. Finally, tomatoes contain low level of sodium levels, fats and calories, making it ideal for dieters.

Key nutrients: While most often associated with lycopene (a carotenoid phytonutrient widely recognised for its antioxidant properties), tomatoes provide a unique variety of phytonutrients. Included are additional carotenoids (including beta-carotene, lutein and zeaxanthin); flavonoids (including naringenin, chalconaringenin, rutin, kaempferol and quercetin); hydroxycinnamic acids (including caffeic, ferulic and coumaric acid); glycosides (including esculeoside A) and fatty acid derivatives (including 9-oxo-octadecadienoic acid).

Pest/Disease: Tomatoes are susceptible to many insect pests and diseases: Bacterial diseases, fungal diseases, moth larvae, nematodes, miscellaneous diseases and disorders.

On 28 October 2016**,** the Department of Agriculture, Forestry and Fisheries (DAFF) announced that the first *Tuta absoluta,* commonly known also as the Tomato Leaf Miner*,* has been detected in the eastern parts of the Mpumalanga Province, South Africa. This pest is disastrous, particularly for tomato production and food security in general.

This pest cannot be completely eradicated; however, it can be contained and suppressed to lower population levels. The DAFF has already engaged with the tomato and potato production industries and the ARC and underscored an urgent need for development of a detailed plan of action. Such an action plan will be shared with all the relevant role players in due course.
