ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Intended plantings of summer grain crops for the 2018 production season

Figures on the intended plantings of summer crops for the 2018 production season were released by the Crop Estimates Committee (CEC) on 26 October 2017. Based on inputs received from a sample of producers, the area expected to be planted to maize on commercial farms was 2,470 million ha, of which 1,404 million ha (57%) were earmarked for white maize and 1,066 million ha (43%) for yellow maize. The commercial producers therefore intended to decrease the area planted to white maize by 239 000 ha (14,6%) and increase yellow maize plantings by 80 800 ha (8,2%) from the previous season.

Producers indicated that less maize, especially white maize, will be planted for the 2018 season, mainly because of farmers switching to other crops such as oilseeds and yellow maize due to price competitiveness.

In the case of sunflower seed, intended plantings were estimated at 665 500 ha, which is 4,7% or 29 750 ha more than the 635 750 ha planted the previous season.

The intended plantings of soya beans showed an increase of 25,4% from the area planted the previous season, from 573 950 ha to 720 000 ha.

The intended plantings of groundnuts were 17,0% higher than the area planted the previous season, from 56 000 ha to 65 500 ha.

The plantings of sorghum were expected to increase by 3,2%, from 42 350 ha to 43 700 ha.

The intended plantings of dry beans showed an increase of 33,2% from the area planted the previous season, from 45 050 ha to 60 000 ha.

Summary of intended plantings of summer grain crops: 2018 production season

Crop	Intended plantings 2018	Area planted 2017	Change 2018 vs 2017
	ha	ha	%
White maize	1 404 100	1 643 100	-14,6
Yellow maize	1 066 300	985 500	+8,2
Total maize	2 470 400	2 628 600	-6,0
Sunflower seed	665 500	635 750	+4,7
Soya beans	720 000	573 950	+25,4
Groundnuts	65 500	56 000	+17,0
Sorghum	43 700	42 350	+3,2
Dry beans	60 000	45 050	+33,2
Total	4 025 100	3 981 700	+1,1

Estimates are based on conditions by the middle of October 2017

Approximately 86% of the total area planted to summer grain crops in South Africa during the past three years was located in the Free State (44%), North West (22%) and Mpumalanga (20%) provinces.

Third production forecast for winter crops for the 2017 production season

According to the third production forecast for 2017 released by the CEC on 26 October 2017, the expected wheat crop was 1,655 million tons, which is 13,3% or 254 750 tons less than the crop of 1,910 million tons of the previous season. The expected yield was 3,37 t/ha, as against 3,76 t/ha the previous season.

The main wheat producing areas for 2017 are within the Western Cape with 326 000 ha (66,3%), followed by the Free State with 80 000 ha (16,3%). The expected yield for the Western Cape was 2,30 t/ha, as against 3,40 t/ha the previous season and for the Free State 4,00 t/ha, compared to 2,80 t/ha.

For the 2017 production season, a large decline in wheat production is expected. This is mainly because the main wheat producing province, namely the Western Cape, experienced intense dryness with little rainfall, which is not favourable for the wheat crop.

The production forecast for malting barley was 281 059 tons. The area planted was estimated at 91 380 ha, while the expected yield was 3,08 t/ha.

The expected canola crop was 100 800 tons, while the area estimate was 84 000 ha, with an expected yield of 1,20 t/ha.

Area and production estimates for winter cereals: 2017 vs the 2016 production season

Crop	Area planted 2017	Third forecast 2017	Area planted 2016	Final crop 2016	Change – tons 2017 vs 2016
	(A)	(B)	(C)	(D)	(B)÷(D)
	ha	tons	ha	tons	%
Wheat	491 600	1 655 250	508 365	1 910 000	-13,3
Malting barley	91 380	281 059	88 695	355 000	-20,8
Canola	84 000	100 800	68 075	105 000	-4,0
Total	666 980	2 037 109	665 135	2 370 000	-14,1

2. ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	Oct. ’15 to Sep. ’16	Oct. ’16 to Sep. ’17	% change
Total gross farming income (R million)	251 330	271 569	+8,1
Expenditure on intermediate goods and services (R million)	130 902	139 594	+6,6
Total farming cost (R million)	165 123	176 227	+6,7
Net farming income (R million)	90 091	102 800	+14,1
Domestic terms of trade (2010 = 1)	1,14	1,09	-4,4

Gross income from major products at current prices

Field crops (R million)	Oct. ’15 to Sep. ’16	Oct. ’16 to Sep. ’17	% change
Maize	28 506	29 669	+4,1
Wheat	5 457	7 107	+30,3
Sugar cane	7 180	8 184	+14,0
Sunflower seed	4 752	4 002	-15,8
Tobacco	570	605	+6,1
All field crops	56 749	63 041	+11,1
Horticulture (R million)			
Vegetables (including potatoes)	22 907	20 566	-10,2
Deciduous and other fruit	20 276	19 573	-3,5
Citrus fruit	18 231	19 157	+5,1
Viticulture	5 006	5 094	+1,8
Subtropical fruit	4 147	4 075	-1,7
All horticultural products	77 564	76 570	-1,3
Animal products (R million)			
Poultry meat	35 692	42 901	+20,2
Cattle and calves slaughtered	31 799	35 062	+10,3
Milk	14 857	16 948	+14,1
Eggs	10 199	10 314	+1,1
Sheep slaughtered	6 351	7 041	+10,9
All animal products	117 017	131 958	+12,8

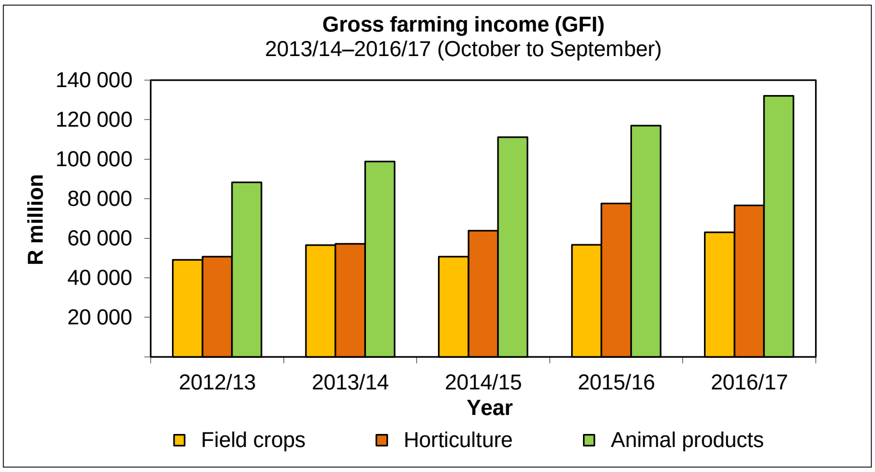
3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 1 October 2016 to 30 September 2017. Aggregates are compared with the period 1 October 2015 to 30 September 2016.

Gross farming income

Gross farming income refers to that part of agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross farming income from all agricultural products was estimated at R271 569 million for the year ended 30 September 2017, compared to R251 330 million the previous corresponding period, which is an increase of 8,1%. This was mainly driven by the increase in income from animal products and field crops by 12,8% and 11,1%, respectively.



The increase in income of 11,1% from field crops was largely caused by a substantial increase in income from groundnuts by 377,4%, dry beans (75,8%), grain sorghum (62,9%), cotton (49,1%), wheat (30,3%), sugar cane (14,0%), hay (7,1%), tobacco (6,1%) and maize (4,1%).

The income from horticultural products decreased by 1,3%, and was mainly the result of the decrease in income from vegetables by 10,2%, deciduous and other fruit by 3,5% and subtropical fruit by 1,7%. However, the income from citrus fruit and viticulture increased by 5,1% and 1,8%, respectively.

The increase of 12,8% in income from animal production was driven by the increase in income from poultry meat by 20,2%, milk by 14,1%, sheep slaughtered by 10,9%, cattle and calves slaughtered by 10,3% and eggs by 1,1%.

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased by 6,6% to R139 594 million, from R130 902 million. The increase in expenditure was a result of the increase in prices of packing material by 7,8%, animal health and crop protection (6,6%), fencing material (5,6%), trucks (5,4%), tractors and seeds (5,2%) each, building material (4,9%), feeds (4,4%), maintenance and repairs of machinery and implements (4,2%), fertilisers (2,6%) and fuel (1,7%).

The expenditure on building and fencing material increased by 10,0%, packing material (8,8%), farm feeds (8,0%), farm services and animal health and crop protection (6,0%) each, fuel (5,7%), maintenance and repairs on machinery and implements (4,9%) and fertilisers (3,0%).

Proportionally, farm feeds had the largest share as an expenditure item, accounting about 29,3% of the total expenditure, maintenance and repairs of machinery and implements (13,6%), farm services (12,3%), fuel (8,8%), seed and plants (6,6%), animal health and crop protection (6,2%), fertilisers (4,9%), packing material (4,8%) and building and fencing material (4,1%).

Prices received and paid by farmers

Prices received by farmers for their products increased slightly on average by 0,4%, compared to 16,8% in the previous year.

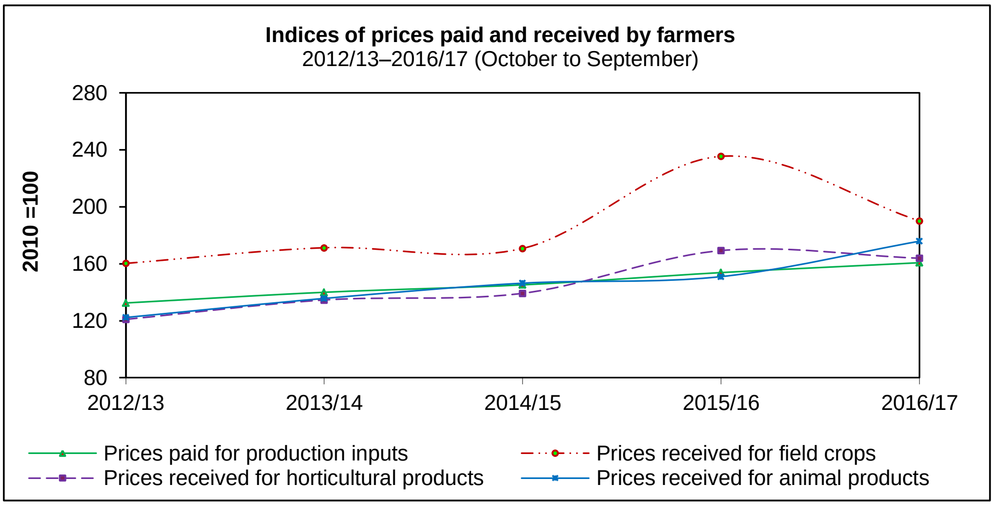
The weighted average price of field crops decreased substantially by 19,3%. This was the result of the decrease in the prices of summer grains by 30,2%, oilseeds (14,8%), winter grains (6,7%), hay (3,2%) and cotton (1,3%). Prices of tobacco increased on average by 13,6%, sugar cane (8,0%) and dry beans (7,4%).

The weighted average price of horticultural products also decreased by 3,2%, as the result of the decrease in the prices of vegetables by 13,3%. Prices of viticulture and fruit increased on average by 3,6% and 2,3%, respectively.

The weighted average price of animal products increased by 16,5%. The main contributors were the increases in the prices of poultry by 18,1%, slaughtered stock by 17,9%, milk by 11,3% and pastoral products by 4,1%.

The prices paid for farming requisites, including machinery and implements, intermediate goods and services and material for fixed improvements, increased by 4,5%, compared to 5,9% the previous period.

The domestic terms of trade decreased by 4,4%. This was caused by the higher production costs, which increased by 4,5%, more than the prices received by the farmers for their agricultural products (0,4%).



Farming income and cash flow

The gross farming income increased by 8,1% and expenditure on production inputs by 6,6%, which resulted in the net farming income increasing by 6,7%. Interest payments increased by 10,5%, rent payments by 5,8% and labour costs by 5,7%.

The farmers' cash flow increased by 10,3%, compared to 19,6% in the previous period.

Conclusion

The increase in gross farming income was mainly driven by the increase in income derived from animal products (12,8%) and field crops (11,1%). Although the prices of field crops declined substantially, the increase in income from these products was the result of the significant growth in the production levels of groundnuts (369,5%), grain sorghum (104,7%), dry beans (101,9%), maize (100,9%), soya beans (70,7%), wheat (32,6%), sugar cane (19,3%) and sunflower seed (16,5%). A decrease in prices of horticultural products impacted negatively on the income derived from these products.

On the other hand, the increase in income from animal products was mainly influenced by the increased prices. The production levels of animal products declined, except for milk, which increased by 2,0%.

The increase in production costs and marginal increase in prices of agricultural products affected the farmers' cash flow position.

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Bloemfontein Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2012 to 2016.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Interesting Nuts: Walnuts

Scientific name: *Juglans regia*

Common names: Persian walnut, English walnut, California black walnut

History: While walnut trees have been cultivated for thousands of years, the different types have varying origins. The English walnut originated in India and the regions surrounding the Caspian Sea, therefore it is known as the Persian walnut. In the 4th century AD, the ancient Romans introduced the walnut to many European countries where it has been grown since. Throughout its history, the walnut tree has been highly revered; not only does it have a life span that is several times that of humans, but its uses include food, medicine, shelter, dye and lamp oil. It is thought that the walnuts grown in North America gained the moniker "English walnuts," since they were introduced into America via English merchant ships.

Black walnuts and white walnuts are native to North America, specifically the Central Mississippi Valley and Appalachian area. They played an important role in the diets and lifestyles of both the Native American Indians and the early colonial settlers.

China is presently the largest commercial producer of walnuts in the world, with about 360,000 metric tons produced per year. The United States is second, with about 294 000 metric tons of production. Within the US, about 90% of all walnuts are grown in California, particularly within the San Joaquin and Sacramento Valleys. The annual combined walnut output of Iran and Turkey is approximately the same as the United States and the Ukraine and Romania are next in line in terms of total walnut production.

Description: *Juglans regia* is a large, deciduous tree reaching heights of 25–35 metres with a trunk width up to 2 metres in diameter, commonly with a short trunk and broad crown, though taller and narrower in dense forest competition. It is a light-demanding species, requiring full sun to grow well.

The bark is smooth, olive-brown when young and silvery-grey on older branches and features scattered broad cracks with a rougher texture. Like all walnuts, the pith of the twigs contains air spaces; this chambered pith is brownish in colour.

The leaves are alternately arranged, 25–40 cm long, odd-pinnate with 5–9 leaflets, paired alternately with one terminal leaflet. The largest leaflets are the three at the apex, 10–18 cm long and 6–8 cm broad; the basal pair of leaflets is much smaller, 5–8 cm long, with the margins of the leaflets entire.

The male flowers are in drooping catkins 5–10 cm long and the female flowers are terminal, in clusters of two to five, ripening in the autumn into a fruit with a green, semi-fleshy husk and a brown, corrugated nut. The seed is large, with a relatively thin shell and edible with a rich flavour.

Types of Walnuts:

The two most common major species of walnuts are grown for their seeds: the Persian or English walnut and the black walnut. The English walnut originated in Persia and the black walnut is native to eastern North America. The black walnut is of high flavour, but due to its hard shell and poor hulling characteristics, it is not grown commercially for nut production. Numerous walnut cultivars have been developed commercially, which are nearly all hybrids of the English walnut.

Cultivation:

Walnut trees thrive in temperate zones and require deep but well drained alluvial type soils. After an orchard is planted, it takes approximately seven years before its first yield, however, once established it will continue to bear quality fruit for as long as 100 years.

The main harvesting of the mature fruit (nuts) takes place in the autumn but the immature green fruit can also be harvested in the summer before the hard shell has formed. These soft fruit are processed by soaking them in a strong brine solution then dried until they turn black. They are then pickled in vinegar and are excellent served with cold meats and cheeses and are especially good with cold roast turkey and ham. They have the added benefit of keeping for several years if stored in an air-tight jar.

Walnut Health Benefits:

Theoretically, it makes sense that a walnut is a "super food" as it is, after all, nature's nursery and a storage device that contains all the highly concentrated proteins, calories and nutrients that the walnut plant embryo requires in order to flourish. However, in addition to being a "super food" storage device, walnuts also have a number of powerful additional health benefits, including the following:

Improved cardiovascular health: Includes improved blood quality, improves vasomotor tone, reduces risk of excessive clotting and decreases risk of excessive inflammation.

Reduction in problems with metabolic syndrome: Potentially adversely impacts one in four adults. Studies have shown that 50 g of walnuts daily over a period of 2-3 months can help reduce several of the key metabolic syndrome related problems.

Benefit in the treatment of Type 2 diabetes: Walnuts contribute to the improvement in cardiovascular function and improved blood fat composition including less LDL cholesterol and less total cholesterol.

Anti-cancer benefits: Walnuts contain a wide variety of antioxidants which help lower the risk of chronic oxidative stress and anti-inflammatory properties that help lower the risk of chronic inflammation and it is precisely these two types of risks that, when combined, pose the greatest threat for cancer development.

Natural antidepressant: They contain traceable amounts of Omega-3 fatty acids which can decrease inflammation in the brain that can interfere with a healthy mood. Walnuts are also helpful for inducing melatonin in the body which helps you sleep.

Improve your memory: According to a *2012 Journal of Alzheimer's Disease,* eating walnuts as part of a Mediterranean diet was associated with better memory and brain function. The antioxidants in walnuts may help counteract age-related cognitive decline and even reduce the risk of neurodegenerative diseases, including Alzheimer's disease.

Culinary uses: Walnuts can be used in a variety of sweet and savoury recipes including cakes and breads and are especially good with cheeses. They make a decorative garnish and are a reasonable substitute for pecan nuts.

External uses:

Walnut husks can be used to make a durable ink for writing and drawing. It is thought to have been used by artists including Leonardo da Vinci and Rembrandt.

Walnut husk pigments are used as a brown dye for fabric as once applied in classical Rome and medieval Europe for dyeing hair.
