ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Intended plantings of summer grain crops for the 2016 production season

Figures on the intended plantings of summer crops for the 2016 production season were released by the Crop Estimates Committee (CEC) on 27 October 2015. Based on inputs received from a sample of producers, the area expected to be planted to maize on commercial farms was 2,551 million ha, of which 1,422 million ha (56%) were earmarked for white maize and 1,129 million ha (44%) for yellow maize. The commercial producers therefore intended to decrease the area planted to white maize by 26 250 ha (1,8%) and yellow maize plantings by 75 800 ha (6,3%) from the previous season.

Producers indicated that less maize would be planted for the 2016 season because they were under pressure because of the dry weather conditions. However, rainfall could still influence farmers' decisions.

In the case of sunflower seed, intended plantings were estimated at 614 000 ha, which is 6,6% or 38 000 ha more than the 576 000 ha planted the previous season.

The intended plantings of soya beans showed an increase of 1,3% from the area planted the previous season, from 687 300 ha to 696 400 ha.

The intended plantings of groundnuts were 22,9% lower than the area planted the previous season, from 58 000 ha to 44 700 ha.

The plantings of sorghum were expected to increase by 6,0%, from 70 500 ha to 74 750 ha.

The intended plantings of dry beans showed a decrease of 19,5% from the area planted the previous season, from 64 000 ha to 51 500 ha.

Summary of intended plantings of summer grain crops: 2016 production season

Crop	Area planted 2015	Intended plantings 2016	Change 2016 *vs* 2015
	ha	ha	%
White maize	1 448 050	1 421 800	-1,8
Yellow maize	1 204 800	1 129 000	-6,3
Total maize	2 652 850	2 550 800	-3,9
Sunflower seed	576 000	614 000	+6,6
Soya beans	687 300	696 400	+1,3
Groundnuts	58 000	44 700	-22,9
Sorghum	70 500	74 750	+6,0
Dry beans	64 000	51 500	-19,5
Total	4 108 650	4 032 150	-1,9

Estimates are based on conditions by the middle of October 2015

Approximately 87% of the total area planted to summer grain crops in South Africa during the past three years was located in the Free State (45%), North West (24%) and Mpumalanga (18%) provinces.

Third production forecast for winter crops for the 2015 production season

According to the third production forecast for 2015, released by the CEC on 27 October 2015, the expected wheat crop was 1,542 million tons, which is 11,9% or 207 650 tons less than the crop of 1,750 million tons of the previous season. The expected yield was 3,20 t/ha, as against 3,67 t/ha the previous season.

The main wheat producing areas for 2015 are within the Western Cape with 310 000 ha (64,3%), followed by the Free State with 80 000 ha (16,6%). The expected yield for the Western Cape was 2,25 t/ha, as against 2,90 t/ha the previous season, and for the Free State 3,20 t/ha, as against 3,53 t/ha.

The situation for wheat in South Africa had deteriorated because of the failure of late winter rains over the western rainfall region. The Swartland area, which represents 65% of the wheat planted in the Western Cape, was very dry and yields had already been affected negatively. However, in the southern parts of the province, above-normal harvests were anticipated because of relatively good rains throughout the season.

The production forecast for malting barley was 347 017 tons. The area planted was estimated at 93 730 ha, while the expected yield was 3,70 t/ha.

The expected canola crop was 105 400 tons, while the area estimate was 78 050 ha, with an expected yield of 1,35 t/ha.

Area and production estimates for winter cereals: 2015 vs the 2014 production season

Crop	Area planted 2015	Third forecast 2015	Area planted 2014	Final crop 2014	Change – tons 2015 *vs* 2014
	(A)	(B)	(C)	(D)	(B)÷(D)
	ha	tons	ha	tons	%
Wheat	482 150	1 542 350	476 570	1 750 000	-11,9
Malting barley	93 730	347 017	85 125	302 000	+14,9
Canola	78 050	105 400	95 000	121 000	-12,9
Total	653 930	1 994 767	656 695	2 173 000	-8,2

2. ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	Oct. ’13 to Sep. ’14	Oct. ’14 to Sep. ’15	% change
Total gross farming income (R million)	213 129	220 472	+3,4
Expenditure on intermediate goods and services (R million)	114 661	122 337	+6,7
Total farming cost (R million)	144 597	154 256	+6,7
Net farming income (R million)	73 389	70 934	-3,3
Domestic terms of trade (2010 = 1)	1,02	1,02	0,0

Gross income from major products at current prices

Field crops (R million)	Oct. ’13 to Sep. ’14	Oct. ’14 to Sep. ’15	% change
Maize	28 600	23 296	-18,5
Wheat	5 410	5 366	-0,8
Sugar cane	7 215	6 589	-8,7
Sunflower seed	3 817	3 152	-17,4
Tobacco	414	492	+19,0
All field crops	56 429	49 383	-12,5
Horticulture (R million)			
Vegetables (including potatoes)	17 672	17 904	+1,3
Deciduous and other fruit	13 969	16 014	+14,6
Citrus fruit	12 550	13 187	+5,1
Viticulture	4 736	4 678	-1,2
Subtropical fruit	3 371	3 486	+3,4
All horticultural products	57 152	60 835	+6,4
Animal products (R million)			
Poultry meat	33 681	37 414	+11,1
Cattle and calves slaughtered	23 748	26 911	+13,3
Milk	13 216	14 874	+12,5
Eggs	8 968	9 547	+6,5
Sheep slaughtered	5 320	5 962	+12,1
All animal products	99 548	110 253	+10,8

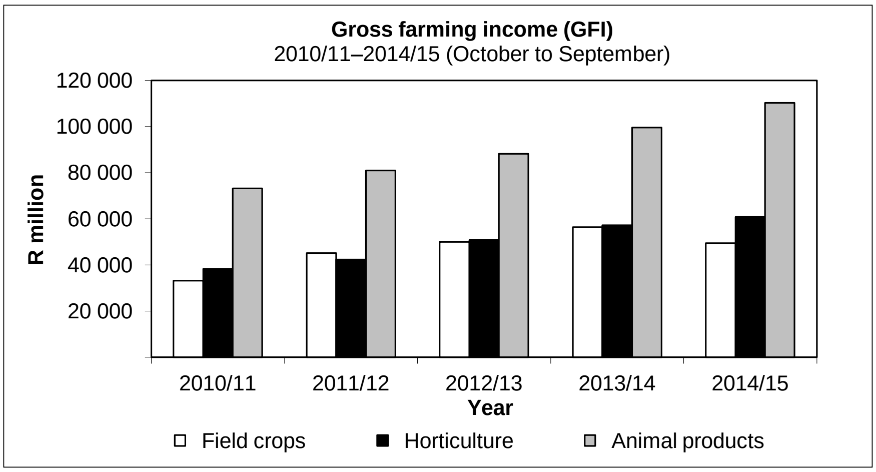
3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 1 October 2014 to 30 September 2015. Aggregates are compared with the period 1 October 2013 to 30 September 2014.

Gross farming income

Gross farming income refers to that part of agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross income from all agricultural products increased by 3,4% and amounted to R220 472 million for the year ended 30 September 2015. This was a result of an increase in the gross income from animal and horticultural products by 10,8% and 6,4% respectively. The gross income from field crops decreased by 12,5%.



The decrease in income from field crops by 12,5%, from R56 429 million to R49 383 million, was a result of a decrease in income from grain sorghum by 61,1%, groundnuts by 30,9%, maize by 18,5%, sunflower seed by 17,4%, dry beans by 15,4%, sugar cane by 8,7%, soya beans by 6,1% and wheat by 0,8%. However, the income from tobacco increased by 19,0%.

The gross income from horticultural products increased by 6,4%, from R57 152 million to R60 835 million. The increase was influenced by an increase in income from deciduous and other fruit by 14,6%, citrus fruit by 5,1%, subtropical fruit by 3,4% and vegetables by 1,3%. Viticulture decreased by 1,2%.

The gross income from animal products increased by 10,8%, from R99 548 million to R110 253 million. This increase can be attributed mainly to an increase in income from cattle and calves slaughtered by 13,3%, milk by 12,5%, sheep slaughtered by 12,1%, poultry meat by 11,1% and eggs by 6,5%.

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased by 6,7% or to R122 337 million—from R114 661 million the previous period. The increase in expenditure was mainly influenced by the increase in prices of tractors by 8,7%, trucks (7,1%), building material (6,8%), fencing material (5,8%), maintenance and repairs (5,7%), seeds (4,9%), animal health and crop protection (4,8%), packing material (4,5%), feeds (4,2%) and fertilisers (3,1%).

The expenditure on building and fencing material increased by 11,5%, seed and plants by 10,0%, packing material by 9,0%, farm feeds by 8,0%, farm services and animal health and crop protection by 6,0% each, maintenance and repairs by 5,0%, fuel by 4,8% and fertilisers by 3,0%.

Farm feeds was the main expenditure item, accounting for 28,7% of the total expenditure, followed by maintenance and repairs (14,0%), farm services (12,4%), fuel (9,0%), animal health and crop protection (6,3%), seed and plants (6,2%), fertilisers (5,3%), packing material (4,6%) and building and fencing material (3,9%).

Prices received and paid by farmers

On average, prices received by farmers for their products increased by 3,7%, compared to 9,7% the previous year.

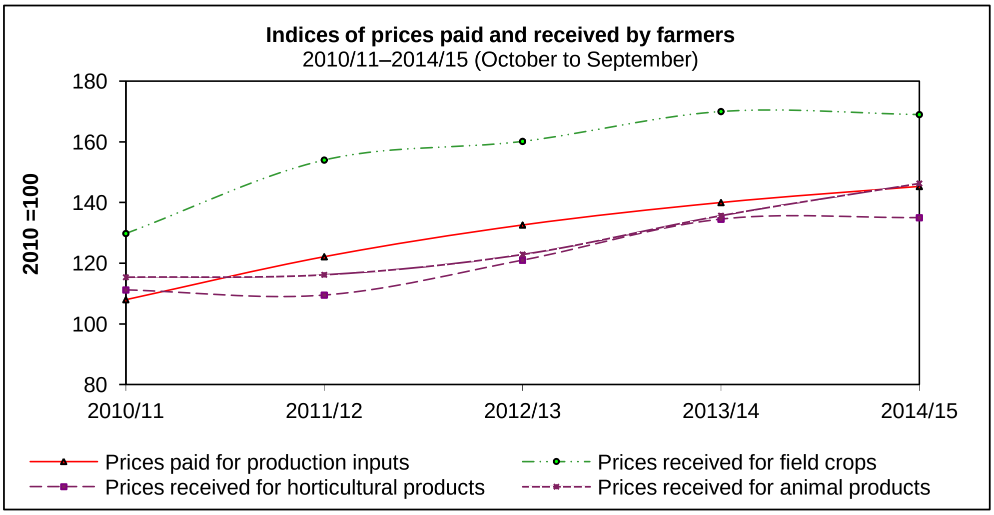
The weighted average price of field crops decreased slightly by 0,5%, mainly because of a decrease in prices of dry beans by 7,8%, oilseeds by 6,2% and summer grains by 4,9%. However, the prices of hay rose by 16,0%, sugar cane by 11,8%, tobacco by 10,1%, cotton by 6,3% and winter grains by 2,1%.

Prices of horticultural products increased slightly by 0,4% as a result of an increase in prices of fruit by 8,1%. The prices of vegetables and viticulture decreased by 10,7% and 0,6% respectively.

Prices of animal products increased by 7,8% and was mainly the result of increases in prices of slaughtered stock by 8,8%, poultry meat by 8,2%, pastoral products by 7,9% and milk by 4,0%.

The prices paid for farming requisites, including machinery and implements, intermediate goods and services and material for fixed improvements, increased by 3,8%, compared to 5,7% the previous year.

The domestic terms of trade remained unchanged at 1,02.



Farming income and cash flow

An increase of 3,4% in gross farming income and 6,7% in expenditure on intermediate production inputs resulted in a decrease of 3,3% in net farming income, from R73 389 million of the previous period to R70 934 million. Interest payments rose by 8,8%, while labour remuneration and rent payments increased by 4,8% each.

The cash flow of farmers decreased by 2,3%, from R74 669 million in the previous period to R72 921 million..

Conclusion

An increase of 3,4% in gross farming income was mainly influenced by an increase in income derived from animal and horticultural products by 10,8% and 6,4% respectively. The net farming income decreased by 3,3%, mainly as a result of an increase in expenditure on intermediate production inputs and prices of production factors. A decrease in production levels of field crops and a decrease in prices received by farmers for field crops also contributed to the decrease in net farming income.

An increase of 3,7% in prices received for farm products and a 3,8% increase in prices of production inputs, resulted in unchanged terms of trade at 1,02.

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on the major fresh produce markets and to make comparisons between markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products, and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products, and *per capita* income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Tshwane Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2010 to 2014.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Interesting fruit: Tangelo

Scientific name: *Citrus tangelo*

Common names: Honeybell Tangelo, Tangelo

History: A tangelo is a hybrid citrus fruit made by crossing a tangerine with a grapefruit or pomelo. Most of the tangelos sold in modern market places are created by farmers who intentionally cross-breed the fruit in order to highlight certain characteristics such as sweetness, juiciness or colour. Tangelos are popular around the world for their sweet-tart taste and long shelf life.

These large evergreen trees are either a happy accident or purposeful cross between a grapefruit and tangerine.

Tangelos, like other citrus, probably first grew in Southeast Asia many thousands of years ago. The hybrids were first described in both California and Florida in the late 1890s. The main areas of production remain Florida and California, which is why it is difficult to find tangelos outside the United States.

Description: The tangelo is a member of the citrus family (oranges, lemons, grapefruit, etc.). It was originally developed from a hybrid between a tangerine and either a pomelo or a grapefruit.

Like all citrus trees, it is an evergreen with thick bright green waxy leaves. While the trunk of the tree has a greyish hue to it, the outer branches are the same colour green as the leaves. Flowers appear from late winter to spring and may be single or clustered. The white, fragrant blooms are highly attractive to honeybees.

Tangelos are round, but have a large, pronounced neck at the stem end. The rind is red-orange, mostly smooth, and easy to peel since it is relatively thin. The flesh is orange and normally has few seeds, although some fruit might have more seeds. The ten to twelve segments inside contain flesh that is both sweet and tart, and juicy and rich in flavour.

The fruit of a tangelo looks similar to a mandarin. The fruit start to ripen from late autumn through to late winter and will last on the tree for between two and three months.

Climate: All citrus trees require hot summers and mild winters to thrive. They can withstand temperatures down to minus -5 °C with only minor damage to outer shoots.

Tangelos are not self-fruitful and require a pollinating cultivar planted nearby. Trees are often alternate bearing, which means they produce a heavy crop one year and a lighter crop the next. Most are grafted on to rootstocks, which impart tolerances to soils, pests and climate conditions.

Cultivation: Tangelos do best in a sheltered position that gets plenty of sunlight. And like all citrus trees, they prefer well-drained soil.

While tangelos do not need fertiliser to produce a healthy crop, they are fairly nitrogen hungry. So if you want to maximise your yield, a liberal spreading of a nitrogen rich fertiliser such as chicken manure in the spring would be useful.

Tangelos generally do not need to be pruned. They can, however, apparently be espaliered, though it's very rare. Irrigation will increase the yield and produce larger and juicier fruit.

Uses: There are many ways to enjoy the tangelo. It is common as a snack, and its easy-to-remove skin makes it an excellent addition to lunchboxes and packed meals.

Many cooks use its segments as a side dish to grilled poultry or meat, or reduce it into sauces and dressings for green salads. The sweet but tangy zip of the tangelo can liven up many different meals and can often work as an interesting substitute for oranges.

Health benefits: Tangelo provides the human body with all the health benefits that oranges provide. It is a remarkable source of flavonoids and vitamin C. It is very efficient in prevention and treatment of certain medical conditions such as the common cold, bronchitis, throat infections, asthma and all the other diseases that may affect the lower and upper respiratory tract.

Tangelo may also come in very handy in fighting the free radicals and reducing the damage they cause. It is very beneficial in slowing down the process of aging, boosting the immune system and reducing the risks of different types of viral infections and cancers.

It is an excellent source of calcium, so it can be of great help in strengthening the bones. Tangelo can also be of great help for all those who suffer from diabetes, constipation and different types of heart diseases.

Key nutrients: Tangelo is a great source of flavonoids, potassium, folic acid and vitamin C. Tangelos are also a great source of dietary fibre and are low in both saturated and unsaturated fat.
