## Does this proposed regulation conform to the relevant international standard?

[ ] Yes [X] No

If no, describe, whenever possible, how and why it deviates from the international standard: Certain proposed limits may differ from Codex limits.

The scientific methodology used by Australia to establish MRLs is consistent with international best practice. Countries set MRLs according to the good agricultural practice (GAP) or good veterinary practice (GVP) applicable to their region.

Agricultural and veterinary chemical use patterns differ between different production regions and countries as pests, diseases and environmental factors vary. This means that Australian MRLs for agricultural and veterinary chemicals in food may differ from Codex standards.
