<b>6. Description of content:</b> Azoxystrobin is an approved active substance in Great Britain. An application was received by the Health and Safety Executive to set new MRLs for celeries and rhubarbs. Following assessment, new MRLs have been introduced to accommodate the authorisations of plant protection products in Great Britain.  The Evaluation Report/Reasoned Opinion supporting the new MRLs is available at the following link. A complete list of the new MRLs is available within this document, see page 5: <a href="#">New MRLs (hse.gov.uk)</a>  The residue levels arising in food from the notified uses result in consumer exposures below the toxicological reference values and therefore harmful effects on human health are not expected. As the residue levels exceed the current MRLs in force, new MRLs are being adopted.

This is to accommodate an authorisation that gives rise to higher residues in celeries than permitted by the CXL and which our assessment demonstrated to be safe for UK consumers.</p>
