The dietary exposure of fenitrothion estimated by using the processing factor to brown rice, the STMR of the supervised residue trials submitted to the JMPR and national food consumption data of this commodity would exceed an ADI of 0.0049 mg/kg bw/day which was set by the Food Safety Commission of Japan (FSC). As such, Japan proposes MRL in rice (brown rice) (0.2 ppm) based on the residue data from supervised trials which were conducted according to the Good Agricultural Practices (GAPs) in Japan, instead of Codex MRL.</p> <p>Wheat and Corn (maize, including pop corn and sweet corn) The dietary exposure of fenitrothion estimated by using the STMR of the supervised residue trials submitted to the JMPR and national food consumption data of these commodities would exceed an ADI of 0.0049 mg/kg bw/day which was set by the FSC. As such, Japan proposes MRLs in wheat (1 ppm) and corn (0.2 ppm) based on the residue data from supervised trials which were conducted according to the GAPs in Japan, instead of Codex MRL.</p> <p>Rice bran and Wheat bran Japan decided not to set MRLs in rice bran and wheat bran because Japan proposes MRLs in rice (brown rice) and wheat based on the residue data from supervised trials which were conducted according to the GAPs in Japan, instead of Codex MRL as described above.</p>
