1. INTRODUCTION

The dawn of the democratic era in South Africa (SA) in 1994, resulted in the looking afresh at the challenges facing this country. It was realised and subsequently encapsulated in policies that there was a need to redress the anomalies fostered by systems that previously supported an exclusive policy. These exclusive policies led to skewed human resource development.

Huge disparities in the level of education among people in the agricultural, forestry and fishery sector have to be addressed with great urgency. The challenges identified, have to be dealt with in order for South Africa to move from its current status to the strategic objective of "equitable access and participation in a globally competitive, profitable and sustainable farming, forestry and fishing sector contributing to a better life for all" (The Strategic Plan for South African Agriculture).

The International Training Strategy for the Agriculture, Forestry and Fisheries Sector will attempt to capitalise on opportunities that exist, especially in the subject areas where skills are lacking, in order to measure up to the challenges faced by the sector. This strategy is a direct response to the "Broadening Access to Agriculture Thrust" (BATAT) programme which promotes the broadening of access to human resource development.

1.1 Background

The redressing of the imbalances of skewed human resource development and the improvement of the skills level of people in the SA agricultural, forestry and fishery sector, is key in achieving the objectives of the Strategic Plan for South African Agriculture but will require a structured approach to optimally utilise the existing training opportunities.

The need for improving skills in the agricultural, forestry and fishery sector is based on the fundamental element of human capacity building. The South African government has committed itself to programmes that give impetus to investment in human capital.

The most desirable aim of the International Training Strategy is strengthening the country's position in terms of regional and global competitiveness, and the building of competence that will enable South Africans to address development issues in the country in order to become internationally competitive and to be able to support other African countries in addressing issues for development of the region.

The International Training Strategy is informed by the Skills Development Act (No.97 of 1998) which was promulgated to ensure the development of skills and competencies of the workforce in SA by encouraging workers to engage in training programmes.

The dawn of democracy in SA ended a long history of isolation. The end of isolation meant that for the first time SA would become an active and legitimate participant in global affairs. Being an active participant meant that the country had to be involved in global economic competition.

1.2 Mandate

The International Training Strategy for the Agriculture, Forestry and Fishery Sector derives its mandate from sources such as the International Training Programme Policy, the Skills Development Act and the HRD Strategy for DAFF.

1.2.1 *International Training Programme Policy*

The International Training Programme Policy sets out guidelines for the creation of a framework for the training of people in the agriculture, forestry and fisheries sector in SA. The framework provides for the effective and coordinated implementation of international training programmes. Through this framework the Department of Agriculture, Forestry and Fisheries (DAFF) will avail resources that will enable access to the training programmes.

1.2.2 The Education and Training (ET) Strategy

The aim of the ET Strategy is to improve the image of agriculture, forestry and fisheries and facilitate equal access to training and education opportunities in the agricultural sector through the harmonisation of training programmes and curricula. A further aim is to continually assess the impact of changes in the agricultural environment and to determine the needs of the sector in order to develop strategies to overcome its challenges.

1.2.3 The Skills Development Act (Act No. 97 of 1998)

The purposes of this act are to enable the development of the skills of the South African workforce, through providing employees with the opportunities to acquire new skills, to encourage workers to participate in learnerships and other training programmes and to improve the employment prospects of persons previously disadvantaged by unfair discrimination and to redress those disadvantages through training and education.

1.2.4 HRD Strategy for the Department of Agriculture, Forestry and Fisheries

The mission of this strategy is to maximise people development, management and empowerment through quality skills development. The strategy aims to develop human resource capacity through relevant skills programmes in order to improve living standards and enable effective and equitable service delivery.

1.3 Current challenges

Challenges facing the sector can be summarised as follows.

1.3.1 Skills shortages

SA is currently facing shortages of skills in certain subject fields in agriculture, forestry and fisheries. These fields are described as scarce skills and they include, but are not limited to, the areas of veterinary sciences, agricultural engineering, agricultural economics, agricultural development and agricultural production which comprise viticulture, biotechnology, fisheries management, marine botany, oceanography, marine conservation, nature conservation (Forestry), as identified through the scarce skills survey. We need to address these skills shortages through structured training interventions to enable a productive agricultural, forestry and fisheries economy. The skills shortages are limiting factors to the proper development of the sector and the country as a whole.

1.3.2 Processing and manufacturing

SA has many natural resources which supply the raw material to industries. Much of these raw materials are exported for processing and manufacturing abroad, leading to great economic benefits to mainly developed countries and such processed goods and products are returned to SA at very high cost.

1.3.3 Development programmes

Many national programmes have been launched in the view of developing the industries and the economy. These programmes require skilled and competent drivers and implementation agents.

1.3.4 Drive to become self-reliant

South Africa has the potential and the inclination to become self-reliant. Currently SA is largely dependent on donor-assisted training and interventions in certain skills areas. SA strives towards becoming less dependent on donor assistance to cope with development issues in the country and region.

1.3.5 Globalisation

Globalisation resulted in the levelling of playing fields for all role players in economies around the world. In order to remain competitive role players South Africa must ensure that they are at the forefront of developments and innovations. South Africa must stay abreast of current regulatory issues, trade matters and technological developments, in order to be competitive and an equal opposition/partner. International training can ensure the acquisition of new technologies, innovations and skills, the exposure to leaders in the various fields, the building of a resource base where information can be sourced from networking with organisations and individuals from developed and developing countries.

1.4 Opportunities

Since 1994 there has been an increased international goodwill towards SA. This is demonstrated in the many bi-lateral and multi-lateral agreements that have been signed between SA and many of the outside countries. These agreements are characterised by trade, training and technology transfer. As a result many training programmes in the areas of Agriculture, Forestry and Fisheries have been offered to SA.

The international training providers have been active in disseminating information on training opportunities to SA, mainly focusing on agriculture production, forestry management and aquaculture. The most prominent include the Cochran Fellowship Programme, which is the USDA's Foreign Agricultural Service International Cooperation and Development Initiative. Other prominent programmes include the Borlaug fellowships offered by USDA's Foreign Agricultural Service, African Land and Food Fellowship (ALF) offered by African Land and Food Trust Sweden International Development Agency (SIDA) offered by the government of Sweden, study tours and industrial placements executed through the DAFF/FAO capacity-building project (GCP/RAF/412/SAF) and Japan International Cooperation Agency (JICA) and Royal Institute of Public Administration (RIPA) International.

Many other opportunities are available through forums to which SA has membership, such as the Cairns Group, The Commonwealth which provide expertise training and consulting services to member countries, CGIAR, EU which is channelling large amounts of foreign aid into SA for development projects and with which SA recently (2004) signed the Trade, Development and Co-operation Agreement, IFAD, FAO, the South-South Cooperation, UN, WFP and the WTO. Some of these bodies and/or agreements do not offer structured training programmes, but if South Africans work in collaboration with missions executed by them, valuable training will be gained.

1.5 Benefits

The direct benefits of international training are the development of the competency of human capacity in the sector and the skilling of its workforce. Acquisition of skills will render the economically viable population internationally competitive. International training must lead to the point where SA has the skills and is capable to address development issues in-country and abroad. International training will focus on the appropriate skills required to drive fundamental key programmes such as ASGI-SA, CASP, AADP, AgriBEE, etc.

1.5.1 ASGI-SA

ASGI-SA seeks to remove the constraints that inhibit economic growth and is based on optimising public investment. International training is a key element of public investment in human capital. Emphasis on education and skills transfer forms a critical component to address the removal of barriers to sustainable economic growth which will be achieved through structured international training.

1.5.2 CASP

CASP aims to provide support and assistance to promote agricultural development, especially among land reform beneficiaries, and this will be achieved through the implementation of a

structured international training programme. CASP is founded upon aspects of technical assistance, training and capacity building and information and knowledge management. The international training programme will target training opportunities that will provide skills in these areas.

1.5.3 AADP

AADP is a programme that will enable SA to assist neighbouring African countries in development issues through mainly providing technical support, technology sharing and harmonisation of standards. This will strengthen relationships on the continent and develop the continents' economic base.

1.5.4 AgriBEE

For emerging farmers to function to their full potential in mainstream agriculture, which AgriBEE aims to achieve, training of the highest quality of the relevant nature and of latest technology is required. The international training programme will be structured to give access to emerging farmers to training interventions that will address these areas.

2. INTERNATIONAL TRAINING STRATEGY FOR THE AGRICULTURE, FORESTRY AND FISHERIES SECTOR

2.1 Vision of the strategy

The vision of this international training strategy is guided by the vision of the DAFF HRD strategy, namely a competent and skilled agriculture, forestry and fisheries sector aimed at better service delivery and the attainment of the core strategies of the sector plan.

2.2 Mission

The mission of this strategy is to access and optimally utilise international training opportunities, build capacity, enrich skills, develop competencies for the empowerment, transformation and development of human capacity in the sector.

2.3 Principles guiding this strategy

The principle guiding this strategy is that it must lead to good returns on investment. It must further lead to measurable outcomes which can be benchmarked to ensure that sector objectives are met, and these include:

- 2.3.1 Facilitating training that is linked to the South African agriculture, forestry and fishery sector objectives.
- 2.3.2 Facilitating training in scarce skills in agriculture, forestry and fisheries, and new innovations and technologies.
- 2.3.3 Facilitating training of individuals who will drive employment equity and transformation in the sector.
- 2.3.4 Facilitating training that will promote competency and enable better service delivery.
- 2.3.5 Facilitate training that is needs directed and strategically linked to the broader human resource development plan of the government.
- 2.3.6 Facilitate equitable access to training.

2.4 Specific objectives

The specific objectives of the international training strategy are to facilitate training in subject areas in which the South African agriculture, forestry and fishery sector is lacking and developing skills that will enable South Africans to become leaders in their fields. The International Training Strategy enables the DAFF to, in consultation with stakeholders, formulate a skills de-

velopment target. This target will be set in realistic terms based on current international training opportunities and the skills needs, with emphasis on the scarce skills in the agriculture, forestry and fishery sector. It is envisaged that targets be projected for periods of five-year terms.

2.5 Specific areas of international training

The specific areas of training that will be addressed through international training will be adjusted from time to time as the needs of the sector change. Currently, the skills needs in the South African agriculture, forestry and fishery sector, among which the scarce skills have been identified as (include but are not limited to these areas):

- Veterinary sciences
- Agricultural engineering
- Food sciences
- Viticulture
- Entomology
- Plant pathology
- Fisheries management
- Marine botany
- Oceanography
- Marine conservation
- Nature conservation (forestry)

Other fields of training will include legal studies, intellectual property rights, quality assurance and best practice in financial management standards, human resource development and human resource management.

2.6 Impact derived from international training

The likely impact that will be derived from the international training is the development of personnel. The emphasis will be placed on developing those skills that are inadequate and will be informed by a skills needs analysis. Building of expertise and developing competencies will be key outcomes of the training interventions.

2.7 Scope of application

This strategy will allow the DAFF to facilitate training for the entire agriculture, forestry and fishery sector in SA, including persons inside and outside the DAFF. Emphasis is placed on eliminating skewed participation and identifying programmes that will encourage the development of potential trainees from the designated groups.

2.8 Areas of focus

The training will be implemented by using various methods and these include staff/student exchange programmes, shadowing consultants/industrial placements, full-time and part-time undergraduate and post-graduate studies, short courses, conferences and seminars.

2.8.1 Staff/student exchange programme

Exchange programmes provide opportunities for staff and/or other potential trainees to be deployed in organisations elsewhere. This arrangement leads to practical on-the-job training. This will include management, professional, technical and student exchange programmes with governments, research institutions, universities and foreign companies. This arrangement will be guided by the secondment policy of the DAFF.

2.8.2 Shadowing consultants/industrial placements

Industrial placements (internships) will be encouraged where trainees (learners) work in conjunction with experts in various fields of scarce and critical skills in the agriculture, forestry and

fishery sector in SA and abroad. This seeks in particular to impart high-level skills to various professionals and technicians in the sector.

2.8.3 Undergraduate studies

Undergraduate study fields will be informed by the skills needs analysis and will be guided by the Sector Strategic Plan objectives and the capacity to provide such skills. Study areas will include the skills required to drive national programmes such as ASGI-SA, AADP, CASP and AgriBEE and will focus on those study fields where South African academic institutions are unable to produce the desired capacities needed by the sector within a given timeframe. The training must be technological in nature and address the issues and problems faced by the beneficiaries of these national programmes.

2.8.4 Post-graduate studies

Topics for post-graduate studies will be determined by the skills need in the country and will be informed by the Sector Strategic Plan objectives. This will include all the study fields identified in 2.5 but with a strong focus on processing and manufacturing skills. Emphasis must be placed on practices that are sustainable.

2.8.5 Short courses

Short courses focusing on areas of trade, import and export programmes and regulatory issues will be targeted as key areas of training. Short course training will be focused but not limited to areas of sustainable development, risk management, monitoring and evaluation, total quality management, contingency planning, project and investment appraisal and auditing. Emphasis for training will be placed on processing and value-adding to raw material. Training will also focus on consumer demand and needs in the global market.

2.8.6 Conferences and seminars

Appropriate and motivated conferences and seminars that offer an element of training and have strategic importance, such as events around international regulatory issues, trends, best practices and standards, will be targeted as international training interventions.

3. ROLES AND RESPONSIBILITIES

3.1 Minister

The Minister will be responsible for the approval of attendance to international training programmes in line with the International Training Programme Policy.

3.2 Director-General

The Director-General is responsible for monitoring and evaluating the impact of international training programmes and to ensure that these are in line with the objectives of the DAFF and the sector in line with the International Training Programme Policy.

3.3 Director: Sector Education and Training

The Director must ensure that procedures are in place to facilitate the accessing of training programmes from international training providers. The Director will also be, overall, responsible for the dissemination of information to external stakeholders, for coordination of training programmes and liaison with all stakeholders involved. The directorate will be responsible for the drafting of travel submissions.

3.4 Director: Human Resources Management

The Directorate: Human Resources Management must ensure that officials, who obtained approval to attend international training programmes and interventions, comply with all procedural requirements for leave and absence from work. HRM must assist in ensuring that officials are trained in accordance with the HRD Strategy objectives.

3.5 Other directorates

Directors of relevant technical units are responsible for disseminating relevant training information within their respective units as well as to provinces where it is relevant. Directorates must guide the Directorate: Sector Education in terms of the preferred institutions with which training, specific to their fields, is preferred.

4. PAYMENT OF EXPENSES

The Directorate: Sector Education and Training will pay for the return airfare for all participants of international training interventions in line with the International Training Policy. The relevant directorates are responsible for a daily subsistence allowance for the appropriate individuals. Where training is not subsidised by the training provider, the directorate of the relevant applicants must fund from their own budgets or source funding elsewhere to enable the payment for the training programme.

5. MONITORING AND EVALUATION

Monitoring and evaluation of training programmes is a fundamental element to ascertain whether programmes meet the required standards as highlighted under the principles guiding this strategy. Participants of international training will submit Back to Office Reports 14 days after the training.

The Directorate: Sector Education will establish an alumni forum of beneficiaries of international training programmes and on tri-annual basis organise alumni conferences with the intention to seek feedback on the impact of the training programmes completed.
