The Difference Between Vaccine, Antibiotics And Antiparasiticides

Vaccine

A vaccine is a product that prevents an animal from getting a disease. Different types of vaccines are used to prevent different diseases. A vaccine must be given to an animal before it gets sick from the disease. (e.g. vaccines against blackwater, anthrax and botulism)

Antibiotics/antibacterial

Medicines used for the treatment of diseases caused by bacteria.

Antiparasiticides

Medicines used to kill parasites (e.g. dewormers for worms; dip for ticks)
